SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 MAY AND FORECAST FOR 22 MAY - 24 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 20 May
Daily Proton Fluence >1 MeV: 1.1E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.4E+08 (moderate)
X-ray background: B1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 May 23 May 24 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 May: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 20 May
Learmonth 2 2211 0010
Fredericksburg 5 13
Planetary 7 13

Observed Kp for 20 May: 3334 2233
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 May 8 Quiet to unsettled
23 May 8 Quiet to unsettled
24 May 8 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 May normal fair-normal fair

PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 May normal normal fair
23 May normal normal fair
24 May normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
21 May 4 about 15% below predicted monthly values

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
22 May 15 Near predicted monthly values
23 May 15 Near predicted monthly values
24 May 15 Near predicted monthly values
COMMENT: Obs Townsville MUFs: near predicted monthly values
Obs Hobart MUFs: 15-30% depressed during local day
Severe night-time spread F observed at Sydney.

First, it sounds like you are not a company store. Are you a Franchise? A dealer? Tandy owned stores (almost all are company owned stores) do not sell products at a loss unless they are broken, old, etc. Second, why sell a product at a loss? Seems kind of stupid to me. Third, why should you sell a demo at a discount? Because it is used equipment. Forth, if someone uses a product, keeps it nice returns it in a box in "resellable" condition, most every RS store will take it and resell it as new. Mind you, it is used. This is fraud and is policy at RS stores. Returns should be sold at a discount and noted as open box returns. Another practice, if a customer returns a product that is defective, it is shipped to a repair station, usually fixed, repacked and sold as new. Customer is completely unaware of this.

Yeah, I know, if I don't like their practices, shop someplace else. Well I do. It is just ashame that most consumers are continually dupped by these ongoing practices.

Regards,

Duffy

: In article jherman@uhunix3.uhcc.Hawaii.Edu (Jeffrey Herman) writes:

: >These exotic modes that you dream about are neither affordable nor common
: >amongst the world's hams.

: That's funny, I have had extended conversations with amateurs in over
: 100 real countries using those digital methods. Our resident "live better
: digitally" Canadian claims 254 DX "countries" on digital modes. Seems the
: rest of the world isn't quite as backward as you'd have us think. Coherent
: techniques are neither exotic nor rare anymore. Thanks to the microelectronics
: revolution, which you apparently slept through, there are single chips, or
: simple chipsets, on the mass market that implement many of these techniques.
: Yes, these are available even to amateurs in Botswana or Gabon.

This argument is disingenuous at best. The fact that you have had
contacts with 100+ countries or that Jim has contacted 254 countries
on digital modes may say a great deal about your abilities and
dedication, but it doesn't say squat about the accessibility of this
technology to the majority of world hams, nor does it say anything
about how many hams actually use such modes. Not even a dedicated
digital devotee could pretend to believe that even a respectable
minority of HF ham shacks in the world have computers and modems.

At the risk of having Todd post a demand to provide "independent,
verifiable evidence", I'd guess that the number of such stations is
less than 5 percent. I'd also guess that the number of amateurs in
the United States using "modern digital" modes on HF is not much
higher.

By the way, working 100+ countries on digital is quite impressive.
Isn't it sad that working 100 countries on CW is so common-place
that it hardly impresses anyone? Don't you just hate those old,
common modes? I don't know why I'm so taken with a mode that so
many people use. I mean, its so *ordinary*, don'cha think? Maybe I
should throw away my key and just live better digitally. Heck, my KAM
will send and receive CW just fine...if I ever feel a need to talk to
all those *other* hams...and just think of the thru-put! Now, if I
could just get my typing speed up to my code speed...

RB> occur in snow storms, espcecially in high wind and wet snow

Once I went up Ben Nevis with some portable equipment, I had an aluminium pole sticking out of my rucksack. I kept hearing a buzzing noise, thought it was an insect but then realised it was static on the top of the pole.

I stopped for a breather and got out my IC-202 2m SSB rig, if I lifted the telescopic aerial above waist height it started sizzling with the static.

I was wondering if any body out there had the schematics for wiring up a Motorolla Radius P110 HighBand HT. I tried a Radiu P50 (I believe) cable and it would read but not write, so I believe that the mic pin out is wired different somehow.

Any help would be GREATLY apreciated!!!

Thanks a million! & 73ï¿½s

I could never figure out what the big deal is about having to learn CW
to get HF privleges ???

Call it "outdated & archaeic", "unnecessary in a digital world",
"stupid"...or whatever but WHAT'S THE BIG DEAL ???
The bottom line is that YOU'RE not STUPID nor LAZY so what's your
excuse? From experience anyone can tell you...put your mind to it,
commit some time (even just a little) ever day or 2 and face it as a
challenge rather than an obstacle and you'll get it (a positive
attitude) !
The latter is what did it for me 10 years ago (back when I HAD TO learn
CW just to get my 1ST LICENCE) ... I said to myself "I'm gonna do what I
have to do to learn this CW thing...I know I can do it !" Sure enough,
a random CW generator for my VIC-20 and an audio CW tape for the car and
it sunk in. In retrospect, a little suffering (if you want to call it
that) for a lot of gain (HF privleges..or for me, my ticket) and would you
believe I actually enjoy making CW contacts now and then just for the
mental stimulation. I'm no CW speed demon but it's still fun !

Never mind the excuses...like the NIKE commercial says..."JUST DO IT !"

Source record: 245989

I have a question that may have been answered elsewhere
in another forum, but I just gotta ask.

With the pending (I assume that it's still pending) petition
for removal of W1AW/K1MAN/... "broadcasts" by W5YI et.al.,
is there any consideration as to what this does to the
"beacons"? Are they protected?

Just asking. I don't own a beacon. I used to use the
14.100 series of world-wide beacons to determine propagation,
but have you listened for them lately?

Ooops, forgot. This pending action before the FCC will of course
only effect the USofA licensed amateurs on the transmitting end.

dit dit

As a young pup back in So. Cal. I recall we periodically were
blasted with a warm dry wind (The Santa Anas) originating from
the upper desserts*. For fun I'd connect an NE-2 neon bulb between
my long wire antenna and ground during these winds. That bulb would
put on quite a light show as it flickered.

Some of the cheaper shortwave receivers currently on the market
encounter front-end damage from these static buildups. A high
value resistor (on the order of 10K-100K) across the antenna
and ground terminals will keep these radios healthy.

Jeff NH6IL

* More precisely, a high-pressure center or ridge sitting over one
of the mid-western states, such as Utah, is the source of this wind.
It can occure as late as December. As a fireman, I despised these
winds, for our worst brush and forest fires were caused and fanned by
these furnace blast-like gusts.

No problem, Paul, we all get caught by the simple things from time
to time. I once tore a TV down because it wouldn't come on when I
pulled the sharpness knob. I had another TV that had the sharpness
and On/off volume knobs in the reverse order, and I just pulled the
wrong one to turn on this set. I hunted through the power supply
for nearly 10 minutes before I realized my boneheaded mistake.

Maybe he means that it is not easy to connect some TNC's to it.
I had problems with mine hooking it up to an MFJ. AFter changing
a resistor in the TNC, it worked like a charm. Also, the
RS does not have a TTL radio port. But this is an HT, not a
full 2 meter all mode, all mighty radio. It is good for what it does,
basic simple communications. If you want to pump up the volume
and fry your neighbor's cat, then invest in something else at the
expense of running with a huge hole in your pocket.

W>I don't mean to be judgemental or critical, but what do people really do with
>wideband receive capability on a "ham" radio?

W>1. Listen to the NOAA weather channel? (I do this)

My HT is modified for this reason. Also, I can use the Marine freqs in a
pinch (although I haven't had to). I put my HT in a waterproof baggie
and store it in a waterproof "glove box" on my Sea Doo when I go out
playing in the Pacific Ocean. It gives me some peace of mind to know
that I can call the Coast Guard for help (if I ever need it) or at least
be able to raise the Marine Operator.

>Los Angeles.

My suggestion: Go mobile. You won't be heard by anybody on their TV for more than a minute as you pass by, and if you live in LA you probably spend a fair amount of time commuting anyway.

There's a 2-band NMO-based antenna that supports both 2M and 6M and I've found it to work pretty well. In fact, the guy I bought it from sells most of them in the LA basin, he said.

Give it a shot. Work the mobile from home for awhile and see who screams. If anybody does, put it back in the car.

If you check the responsible party for each of the "clubs" listed above you will find they all belong to N6TK (Roy Tucker), AA6TK (Kathryn Tucker) or one of the licensed members of their family. Since the FCC made it easy for virtually any amateur to apply for any number of club calls, someone jumped on the bandwagon. I don't believe there is any intention to acquire a 440 pair on behalf of any of these "clubs".

BTW Mr. Tucker is the owner of the 147.435 repeater in Los Angeles.

Only because they have to train operators to use CW. Almost any idiot
can use a keyboard and push buttons (just browse round Usenet for proof
of this... :-)) but an awful lot of technology (= expensive) is needed
to make it that simple. Think of the complexity of a simple QRP CW rig.

Anyway, anyone wanting a code/nocode war please QSY to r.r.a.policy.

Yup. Reminds me a lot of the local citizens in my neighborhood.
They are doing their best to clean up the neighborhood: no outdoor
antennas of any nature are allowed. That's what the majority wants,
and that's exactly what they got.

Seems to me there are two kinds of people: those who think everything
not specifically permitted is forbidden, and those who think everything
not specifically forbidden is permitted.

I have no time for folks who fall into the first group.

To put it bluntly: STOP TELLING ME WHAT I AM ALLOWED TO READ.

Thank you for your consideration.

Also thank you for your consideration in removing at least 4 or 5
of the 6 or 7 groups this has been posted to. "Spam by any other
name tastes just as bad."

Significant static buildups can also occur on home antennas, especially vertical elements. Even larger static buildups will occur in snow storms, espcecially in high wind and wet snow conditions. If you hear popping noises in your rcvr during windy, snowy conditions....that's snow static arcing across something. It's quite common for snow static to build up enough to jump large ball gaps on broadcast towers, and output networks on broadcast transmitters.

It was probably a storm-induced static charge.

I've disconnected the mag mount antenna from my scanner when sitting in
a high country snowshower on Engineer Pass in Colo.
The BNC connector began arcing continously like a spark plug for about 10
minutes. There were no lightning strikes elsewhere from that shower.

I've also seen the same thing when driving thru a shower in Idaho.
On that road trip the CB began screaming from static discharge so I
disconnected the 2m rig. Yup, popping sparks again. (now I carry a
75 ohm terminator resistor for just this situation. Listening to the
sparks is kinda scary :-)

Message-ID: <3pq9pr$ri@gate2.internet-eireann.ie>
Source record: 246047

IRTS News for 21st May 1995

SAREX UPDATE

NASA has announced that the launch of STS 71, which was
to perform docking with the MIR space station, has been delayed.
The new launch date has now been set for 10 June. The delay
was caused by additional work needed to move solar panels
on MIR, and it appears that the work will not be completed
in time for STS 71. STS 70 will fly first, and its launch date
has been set for 8 June. Both STS missions will carry the
Shuttle Amateur Radio Experiment. STS 70 with Discovery will
carry the SAREX payload, courtesy of Mission specialist,
Don Thomas KC5FVF, into a 28.5 degree orbit, and the SAREX
payload will operate on both FM voice and packet for six days.
To prevent confusion about downlink frequencies, those wishing
to make contact with STS 70 should note that the usual downlink
frequency of 145.550 Mhz will be utilised. The STS 71 is slated
to use a downlink of 145.840. The STS 71 mission will use
the MIR communication to simulate SAREX as well. On that
particular mission it will be FM voice only. STS 71 will be
a nine day mission, and will carry Charles Precourt KB5YSQ,
the pilot, and mission specialist, Ellen Baker KB5SIX in a
51.6 degree orbit.

MIR NEWS

The crew aboard the MIR space station are occupied with
the rebuilding of the station in time to dock with the STS
71 mission scheduled for launch on 19 June. The work is quite
extensive and will involve two space walks by the Russians
in order to move the solar panels to make clearance for the
Shuttle. In addition a power module will dock this month.
a few weeks ago the crew dismantled the shower and replaced
it with a gyro. For the next few weeks the shower will be
replaced with wet towels.

Amateur radio has taken a low priority as the crew are
working long hours and seldom get to bed until midnight. The
crews are not in the habit of using any set times for their
radio schedule, but the best times for a contact would be
between 10 pm and midnight. Contacts are generally 3 to 8
minutes long, and the crew like to ragchew. They expect everyone
to wait until they call CQ before going to the next caller.
The packet radio station is not reliable as the crew prefer

to conserve power by shutting it down at night. Work is currently under way to adjust the TNC parameters to improve the performance.

CB USING WORLDWIDE MAIL SYSTEM

Announcements from CB operators in Australia are showing up on amateur radio packet bulletin boards world wide. One group has managed to pass a message on to the system that has turned up in Germany. It calls for CB operators in the Philippines to tune their radios to a specific channel for a simplex chat. So far nobody in Australia knows how these messages found their way into packet. Once the audit trails get back to a specific city they end abruptly. It has been thought that the original posting was to the world wide web with auto-forwarding putting them on to packet networks. Unfortunately the dead end makes it impossible to confirm this theory. Australian Telecommunications Authorities are believed to be looking into the problem, but their investigation may take a long time. For the near future it may be expected that more foreign CB oriented messages will flash through BBS's until the matter is rectified.

GALWAY RADIO EXPERIMENTERS CLUB

On Saturday, 29 April, the GREC participated in an AREN exercise by providing the radio control checking for the UCG Mountaineering Club's annual Maamturk walk. Seven mountain checkpoints, three ground level points and one base control point were manned over the fifteen mile course. All operation was on 2m FM simplex, with a link to Mountain Rescue, who were on standby for emrgencies. Some of the operators actually had to climb the mountains early in the morning to man their checkpoints for the day in atrocious weather conditions of rain and freezing cloud. Of the 263 walkers participating only 72 finished it. The last of the radio personnel arrived from the mountains at 10 pm, which was some feat after setting off at 6 am the same day.

The VHF handheld radios worked very well except for one which, when waterlogged, became locked on its reset frequency. Coverage through the mountains was good, all stations maintaining contact with the base throughout the event. For radio blind spots a mobile base was on hand which was able to provide relays to the main station.

WAI ACTIVITY

"Worked All Ireland" activity continues to increase, with a regular weekend net on 80m, plus many nets to be found around the country on 2m. By all accounts it would appear that one or two dedicated members of these nets will be on target to

claim the basic award in the very near future. Tom Rea EI2GP has made some marathon efforts to activate squares around counties Galway, Mayo and Roscommon, and will be set to qualify for the Mobile Activity award in the not too far distant future. Rumour has it that he will cover many more squares over the next few months. Apart from the marathon squares activation, history has been made as EI2GP has actually activated his Icom HF rig in the last month also. It is to be hoped that the PA transistors will not die of shock! If anyone has plans to operate mobile please pass them on to the Radio News for publication.

ITEMS FOR INCLUSION

That concludes the bulletin for this week. Items for inclusion in the radio news bulletins should be addressed to Steve Wright EI5DD, c/o Department of Pathology, Regional Hospital, Galway. Fax messages may be sent to EI5DD at 091 24216. All such items will be forwarded to Dave Moore EI4BZ for inclusion in the printed news.

Items for the printed newsletter only should be sent direct to Dave at QTHr, or phoned to 021 632444 (daytime) or 021 883555 (evenings). Items may be sent by packet to EI4BZ at EI7DKB-5, or by fax to 021 632730.

From: jlloyd@PROBLEM_WITH_INEWS_GATEWAY_FILE
Message-ID: <3pq88k$85h@hubcap.clemson.edu>
Source record: 246048

Hello Everyone,
I have a relative in the UK who is blind. He currently has a
UK ham licence that allows him to operate above 30MHz. However, he
would like to learn morse code so he can upgrade his licence and
work the HF bands.
I am looking for computer software that might be suitable for
blind hams to use to learn morse code. I have some standard programs
such as SuperMorse, but since he can not see the screen, these may
be difficult to use. Therefore, a program with a voice synthesiser
(he has the Hal system used by the blind in the UK) that says the
letter/word as well as the morse code would be useful.
If you know of such software or any groups that may be able
to help, please reply via e-mail.

3458. FM in June VHF QSO Party

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-22 00:00:00 UTC
From: ROSLEWSKIRB96%CS26@cadetmail.usafa.af.mil
Message-ID: <ROSLEWSKIRB96%CS26.191@cadetmail.usafa.af.mil>
Source record: 246050

Hi all,
Looking forward to the June VHF QSO Party coming up in a couple weeks, wondering how much activity is generally on FM. I would assume that most of the _serious_ activity would be on SSB. However, since the first radio of almost all new no-code techs is a 2m or 2m/440 handheld, it would seem to me that there would also be a lot of activity on FM as well. Hook up a small yagi, go QRP portable, and you're set! So how much activity _is_ there on FM during this contest?

Thanks and 73,
Russ KI7FL

Both the Yaesu FT-530 and Kenwood TH-78A are capable of this. At least in
Canada all that I've seen come already so equipped...just dial in the frequency
you want to receive. Don't know about the US version.

If you look at the results of the VHF SS in the June QST, you'll see
that there's a LOT of activity on FM, even among the big contesters.
A friend of mine took his section on 23cm with 4 FM contacts.

Please explain how tossing out a basic foundation contributes to advancing the radio arts? Mastering the International Morse Code as a communications technique most definitely advances the skill of the operator and by default advances the radio arts. Granted, it isn't the only way, but it's most certainly one that has proven quite effective for eighty-plus years.

Note that the TVRO satellite transponders have an ID code IN CW (!) which
is decoded by the receivers when automatically programming the tracking
of the dish. I just sat on an installation job and watched one do
this...it has been in use for some time now.

This isn't public service or military per se, but it IS a current
commercial use of CW.

Why would one individual or family be motivated to set up a number of clubs which are seemingly empty shells? Are there advantages under the tax laws? Do clubs have leverage with manufacturers and distributors? This is certainly a curious situation.

Although the the club names listed above are quite colorful, they recall the stillness behind building fronts on an abandoned western movie set.

3471. Cellular goes belly-up in crisis!!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-22 00:00:00 UTC
From: helliott@losat.redstone.army.mil
Message-ID: <3pqqgl$j9e@michp1.redstone.army.mil>
Source record: 246063

From the Huntsville Times, Sunday, May 21, 1995 Huntsville, Alabama.
By Martin Burkey

"Cellular phone users frustrated because of overloaded channels"

Note from poster - There was a force level 4 tornado that swept through northern Madison County in North Alabama Thursday afternoon May 18 and destroyed many houses. This article is one of many on the resulting tragedies.

"It was a phenomenon of the new age of communications. When phone lines went down in tornado stricken North Huntsville on Thursday, people reached for their cellular phones.

And many frustrated cusotmers got a busy signal several times before they could get through to loved ones or insurance agents.

No cellular towers were damaged in the storm, but like land lines, it is possible to overload the system with calls, cellular officials said. There aren't enough channels to handle everyone at once.

...

BellSouth Mobility field engineer Vick Boucher said several sites operated for a while on batteries until commercial power was restored. Company engineers monitored the system's status from home computers, but they won't know until next month how many busy signals people were getting.

"We can't control how many are hitting that send button at one time'", he said. "We've only got so many channels at a site, determined by the amount of people in an area or traffic. In an emergency, everybody's trying to get through. In a crisis, its not like you can go out and add channels."

..." The remainder of the article discussed the damage to the physical lines which caused the excessive use of the cellular phones.

I am posting this to point out the false assumption that I have seen stated in this group and in other groups that cellular phones provide as good or better capability in an emergency than do ham radio operators. Its pretty obvious that the cellular system fell apart in this case, and although it recovered, it could not provide emergency service even in a very small and localized emergency situation. I imagine that a widespread disaster would have brought about cellular constipation much more quickly.

Cross post this as you see fit.

In article <3ppt2v$4cc@uuneo.neosoft.com> jreese@neosoft.com (James Reese) writes:

>I care because I'm a frequency coordinator. I hear the same arguements about
>how the "chosen elite" have "horded" frequencies for themselves. What a load
>of absolute manure!

Great, I've located a frequency coordinator, I have a group of folks that
would like to talk to you about getting a 440 repeater pair. They wish
to have a private repeater on 440 and have the machine open by invitation.

>The people who are involved in frequency coordination are generally active
>amateurs. They are also active in building radios. In any situation 10% of
>the people do 90% of the work.

I'm not sure of what you mean by building radios, but if that means repeaters
it would appear that there is a conflict of interest here if someone
actually owns/controls a repeater. This is exactly why the folks on 440 are
foaming at the mouth. They want to put up a repeater, but no one wants to
talk to them. One of the gripes I keep hearing is that the people who own
the repeaters have friends or actually sit on the coordinating committee. As
an observer this does not look good at all. I'm everything was fine in the
beginning when there were only a few groups that were willing to put up a
repeater. But times have changed.

>The same 10% who build most of the radios are
>the same 10% who care enough to accept the thankless job of frequency
>coordination.

Admirable, but let's look at the results. You now have a band of frequencies
dedicated to private or closed repeaters, hardly any frequencies for simplex
operation. And finally you have a bunch of hams who have licenses that
have bought dual band radios and can't find a 440 frequency to use. Okay,
I'll grant you that they want to use repeaters and the the majority of them
want the use of the repeater for free. But the open repeaters are few and
are heavily used. Many of these private or closed freqencies are hardly
being used.

One good example is 445.300 the WA6IGJ repeater. This repeater has pretty
good coverage, but the frequency is almost never used. I periodically
monitor frequencies on the 440 spectrum and find some that are almost never
used. I don't mean to single out Mr. Cardenas (I know he has an internet
address and may read this message), but he is not alone in this matter.

I believe if you are a trustee or own a repeater, that should disqualify you
as someone who should hold a position in the coordinating comittee in the
band. This should be requirement in all coordinating committees.

>How would you feel if you were on the RECEIVING end of the criticism you are
>dishing out? ...especially if you weren't being compensated for your
>efforts...

To be honest I would not like the criticism at all you are receiving. But
this comes with the territory. This issue is like the American Settlers and
the Indians. Who was here first and what was actually done.

Unfortunately, I'm a frequency coordinator in Texas...

>>The people who are involved in frequency coordination are generally active

Keep in mind that being a frequency coordinator is a voluntary position. If
you tell someone who owns a repeater they cannot be a frequency coordinator
you are asking them to choose between taking a volunteer job that isn't much
fun and doing the very thing they are interested in--building repeaters.
Because of the nature of ham radio, you wouldn't get many volunteers that way.

>his is exactly why the folks on 440 are
>foaming at the mouth. They want to put up a repeater, but no one wants to
>talk to them. One of the gripes I keep hearing is that the people who own

Again, this looks good on paper, but it won't work in the real world.

>>The same 10% who build most of the radios are
>>the same 10% who care enough to accept the thankless job of frequency
>>coordination.
>
>Admirable, but let's look at the results. You now have a band of frequencies
>dedicated to private or closed repeaters, hardly any frequencies for simplex
>operation.

The people who planned the California frequency plan didn't insist that all
repeaters on UHF be closed. The trustees of those repeaters wanted it that
way. The trustee OWNS the repeater. They can say who uses it and who
doesn't. A frequency coordinator who mandates that repeaters be open will not
survive long in the real world. The same is true of a coordinator who forces
people to co-channel when they don't want to. Frequency coordination is 1%
technical and 99% political. If the political climate is such that the
technical solutions won't work, they simply won't work. That's the breaks.

Now if you can change the political climate, you might have a chance...

>And finally you have a bunch of hams who have licenses that
>have bought dual band radios and can't find a 440 frequency to use.

To this I say "buyer beware". Anyone who buys a radio without researching what the conditions are on the band that radio operates deserves what they get.

>Okay,
>I'll grant you that they want to use repeaters and the the majority of them
>want the use of the repeater for free. But the open repeaters are few and
>are heavily used.

This is exactly WHY closed repeaters exist. The trustees get tired of people complaining about how the radio operates, how long it takes to get fixed, etc. Most of the people I know who operate closed repeaters have operated open ones in the past. Many operate both open and closed systems. Open systems have their place, but so do closed ones.

>Many of these private or closed freqencies are hardly
>being used.

This is a problem. Unfortunately, in order for a frequency coordinator to address this problem, he must make a judgement call as to who is "more worthy" of the frequency. Such judgement calls will eventually get the coordination group sued, so they are usually avoided at all cost. The first person who comes up with a fair and equitible solution to this problem will solve one of the most serious problems with amateur frequency coordination. Our coordination group has tried for over 20 years to come up with a workable solution without success.

>I believe if you are a trustee or own a repeater, that should disqualify you
>as someone who should hold a position in the coordinating comittee in the
>band. This should be requirement in all coordinating committees.

Again, this looks good on paper, but who would volunteer under these circumstances? I wouldn't, and I'd wager most other frequency coordinators wouldn't either.

>>How would you feel if you were on the RECEIVING end of the criticism you are
>>dishing out? ...especially if you weren't being compensated for your
>>efforts...

>To be honest I would not like the criticism at all you are receiving. But
>this comes with the territory.

I asked this question to make you and others think about how the coordinators feel about the criticism. Much of the criticism turns personal.

>This issue is like the American Settlers and
>the Indians. Who was here first and what was actually done.

A good analogy. Unfortunately, in both cases, what was done in the past can't be undone in the present. We must find the solution in the future. I don't have the answers.

3477. Dealers - Room for Negotiation?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-22 00:00:00 UTC
From: dearnshaw@worldbank.org
Message-ID: <3pqsjp$vv7@minerva.worldbank.org>
Source record: 246069

I'm curious. Does anyone have any idea what the profit margin is involved with high-priced ticket items, such as a Yaesu FT1000D? One would think that dealers don't sell these sorts of things every day, and would be willing (if not eager) to accommodate/negotiate with a serious customer.

But no, it appears not. I have phoned three dealers up today (with my credit card ready) to buy a new FT1000D. All of the dealer's prices are within $20 of each - around $3995.00. When asked if these prices were set in "concrete", the answer was unanimously "yes" - ie, no negotiation. (One major retailer out of Texas had a discount coupon for $100-off that expired last Friday [20 May]. When I phoned this morning [Monday, 22 May] - just 2 days later - and offered to place an order, providing it was at last Friday's price, I was told that the coupon had expired and the discount was now $50. When I said that presumably at nearly $4,000 shipping would be free, I was told "no", shipping will be around $50.) One dealer out of the mid-west quoted me $3944, and when I called back to confirm some two hours later, the price had increased to $4048!

Is this cavilier, uncompromising attitude normal in the ham radio retail business? Perhaps I'm being naive in assuming that a $4000-order is signficant and important; it's certainly important to me.

>in storms?
>

It may have been what is refered to in aviation as "precipitation static" or just "P static". A static charge can build up on your antenna, and your entire vehicle for that matter, when it is drivin through heavy rain or snow. The impact of the rain drops (or whatever) causes a charge to build up. Driving through cloud of dust can do the same thing.

The phenomenon is usually has more noticable effects in dry snow or ice. Aircraft flying through snow or clouds of small ice crystals at high speeds can develop enough of a charge on antennas to block out some radio reception - but they can usually still transmit. Many airplanes have wicks on the trailing edges of the wings and stabilizers to allow the static to discharge behind the plane. The buildup is also the reason planes are supposed to be grounded when refueled - to eliminate the potential for a spark when the nozzel/coupling touches the plane.

I assume that you were running your scanner on it's own batteries and it wasn't grounded to the car via a cigarette lighter, etc. And since mag mount antenna generally can't give a good ground, your system, antenna and scanner, built up a charge waiting for you to give it a path to "ground". A ground connection from the antenna connector (coax shield/radio frame) to the car with something as simple as a wire with aligator clips might take care of it.

In article <carndtD8v12G.4A8@netcom.com>, carndt@netcom.com says...
>
>Any time I want something from the Shack, and I'm not sure I know where
>it is, I point it out in the catalog as proof to the 'droid that such an
>item exists, and then leave it up to them to find it. (Lately that
>entails them asking the computer if it's in stock, after which they
>embark on a search for it. I am left to wonder who STOCKS the damn place,
>elves at night when no one is around?)

That's the technique I use. Before I leave home, I check the catalog and figure
out what I want. Then if I'm unable to locate it myself in the store, I ask
for a catalog and look it up in there.

They can deal with catalog numbers. But get more technical than
batteries and stereos and you'll probably get a blank look.

3485. Looking for info on ARRL Technician Class Video Tape

Newsgroup: rec.radio.amateur.misc

My 9 Year old son would like to train for a Technician License. We purchased the how to books from Radio Shack, but found them to be a little dry reading for a 9 year old. From reading this news group, I heard about an ARRL Video Tape that may help him. I understand the price is over $90. Before I invest that much money, I was wandering if anyone had any experience with the Tapes. Any help or advice will be appreceated.

Yours Truly,
Jeff

Hello, Dave. I read that article. very interesting. I gave a copy to a friend who can't seem to get motivated, and would like to give it to another who says he just can't do it. For myself, i'm a new advanced. I got the 13wpm in feb and poured a lot of time and effort into it (i.e. 3/a days, +). I know the code. Can your method help me to get to 20. Do I start from scratch w/2 letters a day at 20 wpm. Seems like i'll need to adapt that somehow...

Well, enjoyed it and nice to catch up to you here...73 de ke4rrg John Hughes

3488. Re: Dealers - Room for Negotiation?

: within $20 of each - around $3995.00. When asked if these prices were set
: in "concrete", the answer was unanimously "yes" - ie, no negotiation. (One
: [everything else deleted.]

I have a few anecdotal (sp?) experiences to relate:

1) As I recall, when QUEMENT'S (in San Jose, CA) was getting out of the
Ham Radio business a couple of years ago, lots of the local hams (incl.
me) were circling like vultures waiting for the "fire sale" when they
would really be cutting prices on new ham gear. Well.... one of the
sales guys there told me that their profit margins were ... I'm pretty
sure he said ...only "10%"..... which astounded me.

2) If the margins really are only 10% ... or even a big 20% ... paying
by credit card means the dealer gives up something like 2-4% to the
credit card companies, right?

3) A close friend during my days in Tokyo, Japan told me that even with
his "employee discount" at one of the BIG THREE Japanese ham gear
makers ... he would still end up paying MORE buying directly from
his own company than if he ordered the same rig from one of the larger
US mail order houses (according to their published prices).

4) With the collapse of the US Dollar versus the Japanese yen, in particular,
I would not hold my breath waiting for prices to drop substantially.
2 years ago, when I left Japan, US1$ equaled 120 yen. Today it is
$1 = 82 yen. Never mind that the dollar is worth only 1/3 of its
value agains the yen as it was a mere 10 years ago.

5) Contrary to the opinion of the original poster ... I submit that there
are in fact a LOT of FT-1000Ds being sold these days ... not just an
occasional sale. In fact, if I knew that I really wanted to buy
(another) FT-1000D, I'd get in line now rather than pay the inevitable
higher prices related to currency fluctuations. Seriously, I have
been surprised at the frequency with which I meet hams on the air
who are using the FT-1000. It isn't just the dedicated contester
or DXer ... there's a lot folks even down on the 75m phone nets that
are playing with the FT-1000. And .... ever notice how often a

packet bulletin or internet posting gets put out offering to trade an Icom-781 or Kenwood TS-950 for an FT-1000D? But never the other way around? ;-)

Cheers
Sandy WA6BXH/7J1ABV

AO>.. horseback riding.
AO>It is an outmoded method of transportation, but
AO>(supposedly) is a hell of a lot of fun!

AO>BTW I love CW... I think it is a blast (even though I can only receive
AO>at around 7... I wish Tech+ had more CW bandwidth, like a portion of
AO>30m)

AO>Adam, N3RCS

Adam, you are saying that you don't like riding a horse with three
legs and no eyes if THAT is your comparison. Not intended as a put
down, BUT if you have only ever run CW at about 7 wpm, it is bound
to feel "outmoded". You have never had the joy of an armchair rag chew
at 25 - 30 wpm, or you wouldn't be saying all that.

Yes, I could enjoy riding the crippled horse, but riding a really grand
horse beats riding in a Cadillac to me!

Because they don't have an interest in weak signal operations. They are
free to match their power levels to their signal path losses.

Are you *sure* you didn't know that?

To avoid messing up this fairly well-behave newsgroup, followup set.

: David, I have the ideal radio for you. It's the GE Mastr II. It has
: a small detachable control panel, no fan, a plain microphone with no
: extraneous buttons and indicators, gobs of power, a user interface
: that even a cop can love, and most important, it's a real radio.

Sounds tempting, but it's a bit of a long walk/swim to come and
collect.....

The PMR stuff on the surplus market here is either of the thermionic
persuasion, with a bootful sized main box and a control head the size of
an FT707, or else is discrete transistor based one box (the size of that
FT707 again)

More recently, some synthesised STORNO gear has appeared, but again
as largish 1-box units. Good radios, built like the legendary
brick-build kharzi, but big.

CHeers

>opining in the other direction. Beats me why they even care.

I care because I'm a frequency coordinator. I hear the same arguements about how the "chosen elite" have "horded" frequencies for themselves. What a load of absolute manure!

The people who are involved in frequency coordination are generally active amateurs. They are also active in building radios. In any situation 10% of the people do 90% of the work. The same 10% who build most of the radios are the same 10% who care enough to accept the thankless job of frequency coordination

How would you feel if you were on the RECEIVING end of the criticism you are dishing out? ...especially if you weren't being compensated for your efforts...

How many repeaters are in your area? How many hams? How many of the
repeaters are built by the same small group of hams? 90% of the work is done
by 10% of the people.

You assume all these frequencies are occupied everywhere in southern
California. The repeaters are scattered over all of southern California, and
there are several places where the frequencies are re-used.

>As long as closing the machine means a de facto closing of the spectrum
>to other amateurs licensed to use that spectrum, there's a problem.

No, there isn't a problem. There is a difference of opinion.

3495. Contesters the ultimate pig

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-22 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <3ppp6f$qui@alterdial.UU.NET>
Source record: 246128

Here is another presentation relayed by:

Burt Fisher South Dennis (Cape Cod), Mass.
Teacher of, Video, Broadcasting, Electronics
Cape Cod Regional Vocational High School
(Home of WCCT-FM 90.3 MHZ)

FISHERB@A1.mec.mass.edu
Amateur Radio Call K1OIK

From: KB8BMN@WB8LYF.#NWOH.OH.USA.NA
To : ALL@ALLUS

Now, many of my comments will be broad-based and do not apply to everyone who is a contester, so please if it does NOT apply to you, DON'T write me a hate-letter. If my comments DO apply to you, I DARE you to write me and try to justify your stupidity.

Contesting is about as old as the radio sport itself. Trying to contact as many station in a specified period of time is a noble and I assume, fun activity. I have never done it myself but many hams do. My first question is, WHERE is the challenge to running 1000, 1200, 1500 watts (and more...you KNOW there are guys running WELL beyond the legal limit!), all the while splattering your dirty, over processed "CQ" and "QRZ" 50 Kc in both directions?

Secondly, and this is where this whole editorial comes from, WHY do you feel the need to drop your stupid CQ right in the middle of the SSTV net freqs? SSTVers as well as AMTOR, RTTY and Packeteers all have to compete with all sorts of "natural" problems (QSB, QRN and QRM, etc.) but during contests a bigger, uglier problem arises. It seems that during contest weekends, the morons crawl out of the wood work and forget all the protocols...all in the name of contesting. The SSTVers (as well as the other digital mode-runners) only have a TINY slice of spectrum that they occupy on 20m (14.230 to 14.235). Many SSTVers are FORCED off of the air during contests because it is literally impossible to send video with all of the splatter and all of the jerks that hear a "clear" freq and just jump in and call CQ CONTEST...without asking QRL? first. Do you REMEMBER QRL?

The SSTVers only ask of this little chunk of 20m but we COULD take more. What would happen if we moved right up next to your favorite DX (fish in a barrel) net? SSTVers have been in the same place forever. WHY do contesters still insist on CQing there? Isn't there a law about lessening the enjoyment of other hams and/or interference?

I am sure there are a half million hams, or more, in America, who have no interest in contesting but are forced off thier favorite nets, rag chews,

skeds and in the case of SSTVers, the only 20m spectrum they occupy, all for the sake of "CQ CONTEST".

Maybe chunks of the bands could be set aside for CONTESTING and NO-CONTESTING. Any contact made outside the Contesting area would not count and any contester heard outside that portion of the band could be turned into the contest judges/sponsored and dis-qualified.

In closing, turn your 5000 watt amps DOWN, turn your raspy power-mikes and speech processors DOWN and turn your RF saturated brains ON!

Hope you win!

-73 and God Bless,

Andy KB8BMN @ WB8LYF.#NWOH.OH

ZW> Zack W9SZ

Right on Zack. And CW identification is used on many many commercial
and public service radios too. It is often masked out so that it is not
heard on the newer 900 MHz systems I think. How often do you hear a
cop's HT or an airport employee's HT dit ditting away with a CW ID.
Happens all the time.

Another apples and oranges comparison. Cellular will not replace conventional two way radio (ham, public or private) but it does provide a valuable resource in an emergency. The system did not fail - as the article stated, the cell sites and MTSO were on the air. It was the users that overloaded the system. If there were as many hams as there are non-technical cell phone users, your local repeaters would probably be unusable too. Ham radio couldn't take on the damands of everyone wanting to communicate any more than cellular could.

There is a feature in cellular that the carriers don't implement refered to as "overload access" - where certain phones (like those used by public safety and utilities) are granted access during overload situations and everyday users are bumped off. I believe the carriers never aggreed on or deleloped a plan to use it - I don't know why.

To balance this - cellular came through very well after the Northridge earthquake in Southern California. If you compare the number if calls handled by cellular to the number of messages sent on ham nets during that period, I bet you would see a big difference in the numbers.

Again - cellular will not replace conventional radio communication in times of emergency. But they will complement eachother. It's the people that make emergency communications by ham radio work - not the technology. But sometimes those same people can't seem to accept that other communications means are also well developed and working better than they think.

Ham radios fills just one of the needs during a major emergency.

-Does anyone out there know of a source(s) for the 2.5mm stereo plug connectors
-used for the microphone connector in many of the HT's ??

I have seen them at the conenctor guys at various hamfests (you know, the
ones with the trays and trays of every connector imaginable except the
one you need :-)

Also, Radio Shack sells an adapter that has a 3.5mm female and a 2.5mm
male connector. Either cut it in half and only use the plug half, or put
a 3.5mm plug on your cable and use the adapter as-is.

On the third hand, check to see it the ring connector is used for
anything interesting. It may just be a current-limited voltage source
to power 3-wire electret mikes; these can often be shorted to ground
(i.e. if you use a mono plug) with no problems other than a tad bit of
power wasted in the limiting resistor.

Because it is a hellacious liability issue. There is no way to guarantee
that the fire chief who bumps a call isn't just calling to let his wife
know that he'll be late, whereas the bumped call could have been a true
emergency call by an everyday user.

3515. German CW Activity Week

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-23 00:00:00 UTC
From: martin.zurn@jrc.it
Message-ID: <9505230635.AA10432@dac.isei.jrc.it>
Source record: 245949

Hi CW operators and fans,

Maybe you'll find this interesting

AGCW-DL ACTIVITY WEEK

Date: Yearly in the week before Whitsun (incl. Whitsun Monday)
1995: 29th of May to 5th of June 1995
Time: Mon 00.00 UTC thru following Monday 24.00 UTC.

Frequencies: VHF and HF: 3.5 MHz to 28 MHz, excluding WARC-bands.

Scoring: HF QSOs 1 pt (Participants using QRP may claim 2 points
per QSO on HF). VHF QSOs count 2 points.

Operation: CW only! Normal QSOs (no contest style)
with exchange of RST, QTH and name. Don't use
serial numbers!

Remarks: Only straight keys, bugs and elbugs are allowed.
Do not use any keyboards or any other kind of
equipment encoding and/or decoding automatically.
DO NOT USE THE MEMORY FUNCTION of elbugs with memories.
Disregarding this rule so will cause disqualification!
The participant confirms his consent with the rules by
putting a signature on the log.

Final score: Sum of QSO points.

Logs: The logs have to contain following columns:

Call | Date | Time | Band | R S T sent | R S T rcvd | Name

We would like to know what rig was used during this activity week. So
please be so kind to add a small description of the rig you used,
especially if u use QRP.

SWL Logs have to include both calls and at least one signal report!

Awards: during this activity week there will be no scoring
in classes or bands but everyone reaching more than 30 points will
receive an award.

Deadline: Deadline is four weeks after the end of the activity week.
Please send your logs to this address:

Falco Theile DL2LQC
Hentschelweg 7
D-04279 Leipzig (Germany)

Source: original info (scanned from hardcopy, slightly modified)

Comment: (de IK2RMZ)

I think this posting is of general interest for QRP Operators
in EU, especially in G which seems to host the largest QRP
community of EU.
Guess QRP operators will appreciate that memory elbugs are banned
and the scoring of 2 pts/QSO is QRP fiendly, too.

The organizer is AGCW-DL, a Germany based CW club with appr.
2000 members. I represent AGCW outside DL. If you wish to know
more about AGCW just drop me a line.

John,

I can't answer your explicit question; but maybe I can help in another
way. Whereabouts is your friend located? I am sure that it would be
possible for him to get some help from the local hams.

There is also a group uk.radio.amateur which might be able to help, if
you have access to it. If not, let me know and I will be happy to
forward stuff to it.

73, John.

>radio of almost all new no-code techs is a 2m or 2m/440 handheld, it would
>seem to me that there would also be a lot of activity on FM as well. Hook
>up a small yagi, go QRP portable, and you're set!

Lacking the Yagi, you can have fun with even a decent 1/4 or 5/8 wave whip
in some areas, by finding a nice mountain to get on top of. In last
year's contest one ham carried his HT with whip with him on a hike in
the Marin Headlands -- the high land just north of the Golden Gate
Bridge -- and handed out lots of Q's to people down the Peninsula and
across the Bay. A good time was had by all. Wish I could remember
his call to give credit where credit is due.

> So how much activity _is_ there on FM during this contest?

This depends on the area. On the East Coast, many VHF contesters seem to
hate FM, and occasionally grumble that the rules ought to outlaw it. On
the West Coast, FM contacts are a large portion of contest QSOs. I don't
know what the situation is wherever you are. Best way is to give it a shot.
Talk up the contest on local repeaters ahead of time (it's against the rules
to get on the repeater during the contest to solicit contacts, but it's
perfectly OK to promote the contest in general ahead of time.) Around here,
contesters try to monitor and call on FM around the top (and sometimes
bottom) of each hour. Remember 146.52 is off bounds. 146.55 seemed to be
the most popular alternative around here last time, but there's no standard
(and there really can't be a national standard, since different areas use
different channel spacing.) On the other bands, the normal calling
frequencies are OK.

When calling CQ on the FM simplex frequencies, expect to pick up
lots of people who aren't familiar with the contest and who don't
know what their grid square is; encourage them and help them
figure out their grid square. Get a good street map of the area and
mark out the grid boundaries. Here in the south Bay Area, we're fortunate
that Lawrence Expressway falls right on the boundary --
local hams usually know where Lawrence Expressway is since it's

the street HRO and several electronics part suppliers are on ;-)

ARLB054 SM election results

Ballots have been counted for Section Manager elections in Nevada,
New York/Long Island and Utah. Terms of office begin July 1, 1995.

The results are as follows:

In Nevada
E. J. Curly Silva, K7HRW, 82
Billy Smith, Jr., W4HMV, 214
Richard H. Warren, Jr., N7RH, 144.
Smith was declared elected.

In New York/Long Island
Leonard A. Buonaiuto, KE2LE, 479
Rick Ramhap, N2GQR, 545
Ramhap was declared elected.

In Utah
Douglas G. Nielson, N7PPW, 42
James F. Rudnicki, NZ7T, 223
Jerry E. Wellman, WB7ULH, 134
Rudnicki was declared elected.

Six other Section Manager positions were not contested. The
following were declared elected.

In Maryland/DC
William Howard, WB3V

In New Hampshire
Alan Shuman, N1FIK

In Northern New Jersey
Richard Moseson, NW2L

Cell phone has 2 flaws when used for emergency communications. First not
everyone can listen in and secondly it lacks flexibility.

It sounds like it worked much better than conventinal lines. Here in
Stillwater we had a small twister a few years ago and it was two days
before my family could call in. There was no damage to the phone system
other than too many people trying to call in. The phones were working
fine localy.

I think that this was use with good effect in the OKC bombing. Ham nets were
operating around the clock with hams doing lots of logistics work getting
aid supplies distributeded and generaly getting things where they were
needed.

Having observed and participated in several disasters a single point
disaster such as OKC is much easier to handle than a wide spread
event such as a twister, hurricane or fire. The reason being that in the
point disaster the phones, transportation and emergency facilities are
all still intact. Often in a wide spread event nothing is left working
or usable and every thing has to be brought in.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 MAY AND FORECAST FOR 24 MAY - 26 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 22 May
Daily Proton Fluence >1 MeV: 6.9E+04
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 6.5E+07 (normal)
X-ray background: A5.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 May 25 May 26 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 May: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to active

Estimated Indices : A K Observed A Index 22 May
Learmonth 11 3112 2343
Fredericksburg 10 7
Planetary 10 7

Observed Kp for 22 May: 3222 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 May 15 Quiet to unsettled
25 May 15 Quiet to unsettled
26 May 8 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 May normal normal normal

PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 May normal normal fair
25 May normal normal fair
26 May normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
23 May 19 near predicted monthly values

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
24 May 15 near predicted monthly values
25 May 15 near predicted monthly values
26 May 15 near predicted monthly values
COMMENT: Obs Townsville and Hobart MUFs: near predicted monthly values. Night-time spread F was observed at Townsville, Sydney and Hobart.

3525. Help With PK88/PCPakratt for Win

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-23 00:00:00 UTC
From: jefffree@eskimo.com
Message-ID: <D91yAv.Hn1@eskimo.com>
Source record: 245959

Need some help please. Have a PK88 TNC connected to PCP�akratt for Windows. Works fine in Dumb Terminal mode, but when switching to VHF Packet, the program refuses to memorize any parameters (including MYCALL) and hence freezes the PTT line from transmitting.

Have turned off the battery memory, so fresh params could be loaded, however, that makes no difference to the program.

Any suggestions appreciated.

>Where to start...??

Why not encourage more simplex operation?

>> set up your own repeaters

and duplicate coverage that already exists 10-fold from existing
repeaters in other bands? Is that really necessary?

Given the density of hams in SoCal simplex should be quite fun. You
folks need to quit relying on someone else's radio (i.e. repeater)
in order to have fun with your own.

And when these newgroups get even more noisy due to self-interested businesses posting hundreds or thousands of ads, will you still be reading netnews?

I think netnews is, in economic terms, a "public good". There is very little direct cost in posting an ad; moreover, once someone posts an ad, it is to one's advantage to join in before the resource is ruined - to "beat the curve". So it eventually becomes polluted with advertisements, diluting the information content below the point where it is worthwhile to bother trying to find the gems.

It's rather like clean air and water; there's little direct cost to polluting, and there is benefit in having such "cheap" waste disposal, so the market forces drive business to pollute. However, the total social cost is enormous.

Please don't pollute cyberspace. Keep ads in rec.radio.swap.

There is nothing wrong with ads that *DIRECTLY* relate to the current subjects in a newsgroup. When an ad is posted in a newsgroup where it doesn't belong, the poster will get flammed, which is not good for their business. People read newgroups usually because they want current information on particular topics. Ads for products in product intesive hobbies like ham radio, and scanning, should be welcomed. When the ads become annoying, the flames will fly again...

Yes there is. I believe information is available on the tapr home page
or a subsequent page with internet gateways in the US..I believe Texas
has the only one of those currently.

http://www.tapr.org/tapr

and if the link doesn't exist, send e-mail to Howie (his address is on
the page) asking where it is, since it might still be under development.

Cheers - Greg, WD5IVD

Now that you mentioned it, my local Rat Shacks don't ask for a phone
number suffix anymore. It didn't bother me or I gave it much thought
when they did, but I did notice they're not asking anymore...but didn't
pay it much mind to ask why they stopped.

Just though I'd add my trivial b.s. :-)

Any electronics parts store...Radio Shack comes to mind, because I've bought this type of jack there and used it for the mic jack in a HT. Radio Shack has the size listed as a standard size. They have mono and stereo type jacks. Off the top of my head I think...3/32" or something like that.

Hope this helps

Sandy,

Quements is quite correct about profit margins on amateur equipment. many times it is only 3 to 5 %. Companies have to take credit cards evens with the percentage points paid back, doing business in todays market demands the use of credit cards. Not as much money is the radio selling business as people seem to think, especially when people go to the local store to kick the tires and then call the first 800 number to beat the sales tax. it;s a wonder that the local dealers are able to stay in business.

I know that it seems that saving a buck is the most important thing when making the purchase of your new radio, antenna or misc. article of new hardware. For those of you who don't have a local Ham Equipment dealer mail order or a road trip is probably the only way out. For those lucky enough to have one think about his plight. He must make a profit to exist. When you have spent all day Saturday assembling your new antenna array and at 4:30 find out you have a bad or missing balun, who do you run to? It better not be mail order since it won't help you on bit not to have it when you need it. You make a phone call to your local, and he even might stay in the shop after closing just to help you out...IF YOU ARE A CUSTOMER!

A customer isn't the person who buts 2m duckie antennas when he has a sale, and leaves his major purchases to Fests or mail order. It isn't the person who takes up 2-4 hours of his or his staffs time showing you the latest and greatest just to have you mail order it. It is the person that has respect for his business and respect for him (her) and his (her) staff. If you take it for granted that someone else will support his business and that you don't have to, then he will vanish. Please help support local dealers. It may cost you 10%, but then that 10% is paid back many times over in the friend-ship that many local dealers will offer. In the help and assistance that many of us need to "Get the D*** antenna up!"

You are likely receiving an aviation non-directional beacon (NDB).
They all reside immediately below the AM broadcast band (<540 Khz). It
is probably within 20 miles or so as NDBs are relatively low power.
The S-O-C is the identifier.

Newsgroups: rec.radio.amateur.misc
From: brian.carling@acenet.com

GC>William, of course CW will be around a long time. Just look at AM,
GC>it's technically obsolete as well, but some people still enjoy using
GC>it. Or consider muzzleloading firearms,

Gary, they enjoy AM because it sounds so much better than SSB.
With AM the carrier swamps out the background noise and removes all
that static and trash inherent in SSB and some other modes.
But the real beauty is in the high fidelity audio one can get in AM, and
the sense of relaxation that is just not obtainable in a quick fire
SSB exchange. It somehow harkens back to a less stressful time,
when people didn't have to yell and scream at each other to have a
decent conversation.

Nothing beats plate modulated AM to the ham who really appreciates
its finer qulaities. For thise who don't, fine. There are plenty of
other modes they can enjoy without GRUMBLING and CRITICISING another
ham's mode of enjoyment.

BSBL>: Gary, it is also unique in that it was used universally in all
BSBL> ^^^^^
BSBL>: nations for many decades,

BSBL>Note the past tense... Thus testing for CW as a separate "pass/fail"
BSBL>element should be religated to a "was" status.

Nonsense. I never said that it was ONLY a thing of the past. It still is
enjoyed by millions of radio amateurs on a daily basis.

BSBL>: and remains to this day the only encoding
BSBL>: scheme of that type that is read without any decoding device beyond
BSBL>: ears and brains by a significant number of people, especially those
BSBL>: in public service and in military service.

BSBL>What public service and/or military are still using CW?

You must be the type that thinks that the USA is the only country on
earth if you have to ask this. Turn on your SW receiver in the
general coverage area some time!
Any dope can plug in an appliance and type into it. It takes real
skill, diligence and patience to master CW.

BSBL>: It is also still used by
BSBL>: the world's largest employer, using straight keys. That being India
BSBL>: Railways.

BSBL>Next time I have a QSO with the Indian Railway I'll keep that in mind.
BSBL>Sorry for that last sarcastic comment, but none of the above
BSBL>arguments present any logical reasoning as to why amatuer radio
BSBL>testing in the USA should retain CW testing as a separate pass/fail
BSBL>element needed for access to HF frequencies.

You are SO brilliant! Sorry for my sarcastic response to your
numerous sarcasms, but THAT was never a point that I was trying to push.
I made no comments about testing vs. not testing. It had nothing to do
with the discussion I was in at all. At least, I said nothing about
testing.

The following is a QST

Ham radio and the Oklahoma explosion. A story not told until
now. Find out more on Newsline report number 927 coming your way
right now!

(*****
OKLAHOMA BOMBING

The April 19th bombing of the federal building in Oklahoma
City, Oklahoma shocked Americans like no event has ever before.
The heavy loss of life, 168 people, and the emotional rescue
effort drew worldwide attention. Among the people helping put
lives and affairs back in order after the blast were amateur radio
operators. We have a special report on the role hams played after
the bombing.

Tornados, severe thunderstorms, that's what Oklahoma is used to dealing with. For amateur radio operators in the state, emergency communications usually means operating nets to assist with severe weather spotting and damage recovery. But April 19th brought a new sense of reality. A new sense of understanding about what disaster can mean. While Americans stared in disbelief at the live video of flames, damage and crying children being carried by fire fighters. Oklahoma hams didn't wait for someone to ask for help.

"I would say it was self activation. A lot of people heard the explosion." Tom Webb, WA9AFM

Tom Webb, WA9AFM is the ARRL Public Information Officer in Oklahoma.

"A lot of our local hams tend to monitor 22/82, which is the primary frequency. And it was essentially everyone realized something was wrong and monitored. Once we received official word, which was about 15 to 20 minutes after the blast, we officially activated the local ARES Net and we continued to operate continuously for about 330 hours." WA9AFM

In all nearly 335 hams provided some sort of communications assistance. Hams responded from Kansas and Texas. And there was plenty of need for what amateur radio could provide.

"We fanned out to various hospitals, this was in accordance with the catastrophic disaster plan that was already in place and which had been practiced frequently in the past. Hams were stationed in the emergency rooms, at the various regional hospitals around the city coordinating casualty evacuation, supply transfers and so on.
After that phase was over we moved into our support phase where we were assigned to the various Salvation Army canteens, warehouses and state emergency command posts to coordinate moving of supplies, although our original function was to provide emergency communication it fell to us also to provide drivers because the limited access to the area, because in fact it was a crime scene. Hams who had such things as pickup trucks, suburbans, vans also were assigned to move a lot of supplies to the various areas." WA9AFM

Even in the heart of downtown, where cellular telephone service was available, there were communications problems only amateur radio could overcome.

"In the downtown area, there are quite a few cellular nodes, public service and commercial radio transceivers. Those were knocked off the air and were therefore useless. And of course initially there was a tremendous load on the phone circuits, cellular circuits and also the public service radio. We provided underlying communications that allowed supplies to be ordered and

transferred and their use coordinated. Our big contribution, I think was the fact we operating out of areas where there were no normal communications. Virtually everyone of the Salvation Armies six canteens were setup in the middle of the street. Obviously with no phone service in most of the buildings around the area were condemned and not inhabitable. We were the only none public service communications available." WA9AFM

There were technical challenges to overcome in providing communications. Webb says Oklahoma hams have a name for the vary area they had to setup stations in.

"We were in what is referred to as Intermod Alley. And in the case of the canteens, being located on the street and in the first few days being moved quite frequently. In one place a handheld transceiver would work quite nicely and move a hundred feet in one direction and it wouldn't work at all. So we discovered that some sort of portable gain antenna is necessary in a situation like this. We also had problems the Sunday after the explosion when all of the pager, commercial and public service radios started coming back on the air down there and the intermod interference really stared to get bad for us. We had to fabricate some intermod fitting stubs and send them downtown so folks could use those to help with the intermod problem." WA9AFM

Disaster ready hams in Oklahoma know how important being ready for emergencies is. They keep emergency communications kits in their cars. The kits include materials like batteries, power adapters, and magnetic mount antennas. That kind of thinking ahead gave hams an advantage during the crisis. Webb says amateur radio operators put in a total of about 5500 man hours assisting in the explosions aftermath. Now they can look back at the nearly two weeks of communications services that they provided.

"I wouldn't want to do it again. But it certainly makes me feel good about the way we handled it. About the way all the agencies that were involved handled it. As one ham in the local area put it, I have never been prouder of my ham ticket than over the past two weeks." WA9AFM

April 19th brought the kind of communications emergency most hams have never even dreamed about. But Tom Webb says the Oklahoma hams handled it. And they did it with professionalism and pride.

One ham was inside the federal building when the explosion hit but escaped without injury. A second ham was inside a department store across the street from the Federal building the blast threw him across his desk. But he escaped serious injury by grabbing his chair as he was being blown across the room. That helped protect him from flying glass. Tom Webb sez that as far as he

has been able to determine none of the people killed in the explosion were amateur radio operators.

(*****
Rules Changes Proposed

The FCC has proposed amateur service rules changes that would affect license examinations, call signs for special event stations, and indicators of portable operation.
First, the FCC proposes to designate one volunteer examiner of a team as the examination session manager. Next, the Commission proposes to give examination credit to former licensees. And to ensure that only bona fide Amateur Radio clubs obtain station licenses the FCC wants to increase to four persons the minimum number of members required to constitute an organization eligible for a club station license.
The FCC also has proposed a change suggested by the ARRL. As part of the vanity call sign proceeding, the Commission has proposed to make one by one call signs available to stations operating in conjunction with short-term events of special significance to the amateur service community.
And the FCC also has proposed to allow portable indicators, such as slash KP2, to be included before, after, or both before and after, the assigned call sign.

(*****
Study Proposes Added Ham Bands

A government study has concluded that amateurs could use 2180 additional kilohertz of spectrum. The National Telecommunications and Information Administration reports this need in a just released ten year projection of spectrum requirements for all licensed radio services.
The NTIA believes that hams should be granted 5 new 50 KHz wide slots in the frequency range of 30 to 50 MHz for a total of 250 KHz of new bandspace; a new allocation from 160 to 190 kHz; Another 50 KHz wide near 5 MHz; Expansion of 10 MHz band by at least 200 kHz; Expansion of 14 MHz band by 50 kHz; Expansion of 18 MHz band by another 150 kHz; Expansion of 24 MHz band by adding 150 kHz; Speedy implementation of the new 219 to 220 MHz band and a Satellite downlink, 29.7 to 30.0 MHz.
The NTIA report notes that the amateur community commenters have suggested significant changes to the allocation table to accommodate expanded amateur operations. Many of the suggested allocation revisions the NTIA says are reasonable.
But there is one cheviot. The study said that any sharing of military radiolocation spectrum with the amateur services on a co-primary basis in current Federal radiolocation bands is not feasible because of the potential loss of operational flexibility for military radar systems. Further, the expansion of use in the 902-928 MHz band by federal and non-federal users, including the

operation of wind profiling radars, may make this band untenable for amateur operations in the future.

(*****
FCC DATA ON INTERNET

The Federal Communications Commission is now offering the complete amateur service database on the Internet, via the FCC's file transfer protocol or FTP site.
This new service marks the beginning of electronic granting of licenses at the FCC's Wireless Telecommunications Bureau. As soon as the data for a new license appears in the database, the license is effective and all privileges of that license may be exercised by the licensee.
Licensees will no longer need to wait to receive a license document in the mail they may use the database as proof of licensing and go on the air immediately.
The database will be updated every Monday by noon Eastern time.

(*****
NEW YORK PHONE

A Newsline feed point is back in service in New York City thanks to Pat Patierno, KB2MQP and the Kings County Repeater Association in Brooklyn New York. The new line is a part of the clubs voice mail system and also features a menu of other services provided by the KCRA. To access the New York City newsline feed dial area code (718) 284-0752. When the phone answers hit the pound sign key followed by the number 1. Newsline will start up and you can record it or play it live on the air.
Our thanks to Pat Patierno and the members of the Kings County Repeater Association for making this new service possible.
And, by the way. An interesting piece of trivia. One of the founding members of the Kings County Repeater Association is our own producer Bill Pasternak, WA6ITF. Back in the 1960's he lived in Brooklyn, held the call sign WA2HVK and along with Larry Levy WA2INM built the first repeater placed in service by the KCRA.

(*****
Crocker Public Service Group

Bob DeMattia, AK1J, and others have formed the Crocker Public Service Group. This is a non-commercial association formed to provide amateur radio support for public service events.
The name chosen honors the memory of past Section Manager Dave Crocker, W1TMO, of Needham, Massachusetts. Dave was a very active amateur who devoted much time and energy to public service and other worthwhile causes.

(*****
Balloon Delay

Dave Mullenix, N9LTD reports via packet that due to weather and problems with launch site availability, the BARS-1 weather balloon launch has been postponed to a date to be announced, probably in early May. Sorry for the inconvenience, but between the Wisconsin weather, the holiday season and the upcoming UW Engineering Expo, we've just been stumped. Watch packet for announcement of the new launch date.

(*****
A GIFT OF LIFE

G4KSJ reports that ninety four year old Frank Gajowniczek passed away. Fifty years ago, in the Auschwitz Concentration Camp, his life was spared when the Polish priest and Radio Amateur, Father Maximilian Kolbe, SP8RN, offered His life in exchange for the life of condemned Gajowniczek. The Camp Commandant accepted the offer. Father Kolbe died by starvation.

(*****
Fr. Len Bose W6BSO, S.K.

Some sad news to report. WA6ZTY says that Father Leonard Bose, W6BSO, became a silent key on February 16th in Oakland, California. He was the Pastor at St. Athanasius Parish in Mt. View and, for 22 years, pastor at St. Lucy Church in Fremont. Father Len was also an avid Ham and DX'er. He was 78 years old.

(*****
DX CONVENTION

In DX, the 4th annual New Orleans DX Convention is slated for the weekend of August 25th and 26th at the Royal Sonesta Hotel. A full range of activities is planned. For more information please write to Weston Straunch, W5VBX, at 2238 Lake Oaks Parkway, New Orleans, Louisiana 70122.

(*****
New to CQ Halls of Fame Inductees

Also, CQ Magazine has announced its 1995 inductees into its Contest and DX Halls of Fame.
The sole new member of the CQ DX Hall of Fame is Carl Henson, WB4ZNH.
New members of the CQ Contest Hall of Fame include Ken Wolff, K1EA; Dick Norton, N6AA; Jim Neiger, N6TJ; and Tine Brajnik, S52AA.

(*****
DXCC CLARIFICATION

Finally, the ARRL's DXCC Desk has announced that the recently adopted minimum size rule went into effect on April 20th when it was publicly announced by the ARRL Awards Committee. The rule will apply only to country petitions received by the DXAC on or

after that date.
The petition for Scarborough Reef was in the hands of the DXAC before April 20th. For that reason, the rule will not be applied by the DXAC in its deliberations and voting on the Scarborough petition.

(*****
YOUNG HAM OF THE YEAR

Lastly, a reminder that the nominating period for the 1995 Young Ham of the Year award closes on June 30. That's about a month and a half from now. If you are one of those who requested a nominating form but have not returned it along with the necessary information on your nominee, please consider doing just that right now. This is because the judging committee will be scattered across the USA and each nominating package must be duplicated so that each person judging has the same information. The Young Ham of the Year award is open to United States licensed amateur radio operators age 18 or younger who have made significant contributions to the nation, their community or the state of the art in Amateur Radio. Nominating forms are available by sending a self addressed stamped envelope to the Young Ham of the Year Award, in care of Newsline at 28197 Robin Avenue, in Saugus, California 91350. Or you can download the form from the ham radio files area on GEnie or America Online.
The youngster selected as 1995 Young Ham of the Year will receive an expense paid trip to the Huntsville Hamfest courtesy of Yaesu USA along with a tour of the Marshall Spaceflight Center and Spacecamp Huntsville thanks to CQ magazine.

Yea, the first one is not supported by N6TK. The second one is.
Its called the double standard. It has been officially invoked.

For those who do not know, N6TK pioneered one way broadcasting
so called "nets" bi-weekly via reverse phone patch. Is the amatuer
RADIO? Sounds like the phone company is making out like gang
busters.

First of all see if there is any DSP made for your transceiver
(if you have a Kenwood, use the Kenwood DSP).
If thats not the case , I would recomend the latest MFJ DSP,
I have read an article on CQ about its capabilities and it seems
to be very good, even for those who don't belive in audio processing
to reduce noise!
I think that's the best buy you can get, at least, if I was going
to buy a DSP for me, I would buy this one !

towen@freenet.vcu.edu wrote:
> Within the last few weeks someone posted a modification to the
> HTX-202's speaker/mic. Something about changing a resistor.

This doesn't have much to do with the external speaker-mike, but FWIW, here's a mod I did to my HTX-202:

My transmit audio was too low, so I cranked up the deviation. After this, the mike audio was too 'hot' so I soldered a 1K ohm chip resistor across the collector-emitter of Q5, the transistor that mutes microphone audio during DTMF operations, effectively padding down the mike gain. I used a Weller PTK tip and it was like the proverbial brain surgery with a hatchet. Guess I should've waited until I got to work where I had access to a surface-mount work station.

I checked deviation by looking at the recovered audio from a local repeater of known deviation with a 'scope. Then cranked up the HTX's deviation until the peaks were about the same. Crude, but it seems to work in a pinch. One of these days when I'm filthy rich, I'll buy a good used Motorola or Cushman service monitor.

Your mike gain is too high if everyone can hear your mobile noise (with the windows closed) while toolin' down the freeway. The ideal situation (IMO) is to close-talk the mike, yet audio drops off to nearly zero when you're backed off six inches or so. That'll keep extraneous noises off the air like your car radio, grandpa's belches, etc.

3549. CW as a digital mode

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-23 00:00:00 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.801241643@melpar>
Source record: 246014

The following semi-technical discussion is intended to provide some information which may be of interest to those involved in the never-ending code/no-code debates which have appeared on the rec.radio.amateur.policy forum. The discussion does *not* address the issue of the "goodness" or "badness" of mandatory code testing, although some mention is made of the shortcomings of Morse code in comparison to other digital communications methods.

The following two topics are discussed:

a) Whether Morse code radio telegraphy is a form of digital communications; and

b) how Morse code radio telegraphy differs from other forms of digital communications.

****

I. Is Morse code telegraphy a form of digital communications?

According to recognized experts in communications, the answer to the above question is yes. I was first prompted to look into this matter when I saw the following among the study questions contained in "The ARRL Extra Class License Manual for the Radio Amateur:"

Question: What digital code consists of elements having unequal length?

Answer: Morse code

Turning to the professionals for help, I found the following definitions in "The New IEEE Standard Dictionary of Electrical and Electronics Terms," fifth edition, 1993, published by the Institute of Electrical and Electronics Engineers (underline emphasis added):

"Telegraphy (data transmission). A system of telecommunication for the transmission of graphic symbols, usually letters or numerals, by the use of a signal code."
~~~~~~~~~~~

"Telegraph signals (telecommunications). The set of conventional elements established by the (signal) code to enable the transmission of a written character (letter, figure, punctuation sign, etc.).....this set of elements being characterized by the variety, the duration, and the relative position of the component
~~~~~~

elements or by some of these features."
~~~~~~~~

"Analog and digital data. Analog data implies continuity, as contrasted to digital data, that is concerned with discrete states. The information content of an analog signal is conveyed by the value or magnitude of some characteristics of the signal such as the amplitude, phase, or frequency of a voltage (etc., etc.). The information content of the digital signal is concerned with discrete states of the signal, such as the presence or absence of a voltage, a contact in the open or closed position, (etc., etc.). The signal is given meaning by assigning numerical values or other information to the various possible combinations of the discrete states of the signal." ~~~~~~~~~~~~~~~~~~~~~~~~~~~
~~~~~~~~~~~~~~~~~~~

DISCUSSION

Since Morse consists of "discrete states" (dits, dahs, spaces) which are combined to form a coded representation of characters, and since it is these standardized, repeatable combinations of discrete signal states which form the basis of Morse telegraphic communications, then based on the above definitions Morse radiotelegraphy would indeed seem to qualify as a form of digital communications, albeit perhaps the most rudimentary.

Pursuing this matter further I found the following information in Chapter 8, "Digital Communications," in the well-known "Handbook of Electronic Communication" by Gary M. Miller (Prentice-Hall, 1979). This quotation supports the notion of Morse code as a form of digital communications:

"Digital communications refers to a number of different concepts. In this chapter, the following digitally related subjects will be presented:

1. Coding
2. Radio telegraphy
3. Pulse modulation
4. Pulse-code modulation
5. Digital data
6. Telemetry

(end of quote) (p.231)

In a more humorous vein, it might be worth noting the following definition from "The American Heritage Dictionary," second college edition:

"Digital n. A key played with the finger, as on a piano."

Thus, a telegraph key "played" with the finger is really a "digital" key, revealing yet another perspective on the concept of

Morse radiotelegraphy as a form of digital communications.

****

II. How does Morse compare with other forms of digital communications?

Miller points out that while Morse may be properly identified as a form of digital communications, it isn't a true binary code and this presents some problems:

"The familiar Morse code is not a true binary code, in that it not only includes marks and spaces but also differentiates between the duration of these conditions. The Morse code is, therefore, not well suited to today's automated telegraphic equipment but is still widely used in amateur radio-telegraphic communications. The machines used (in other telegraphic communications) are very good at differentiating between a "high" or "low" but to also require them to make differentiations between various widths of pulses is an extreme complicating factor at the receiver and prone to error. However, a human skilled at code reception can provide highly accurate decoding." (p. 236)

The above passage supports the notion that Morse code is primarily a "human skill" rather than a purely technological method of communications (i.e., one which does not require human intervention in the encoding/decoding process during transmission).

The following passage, which describes how Morse radio telegraphy is generated, is of interest because it addresses the misuse of the term "CW:"

"The most elementary form of transmitting 'highs' and 'lows' is to simply key a transmitter's carrier on and off. Figure ___ shows a dot-dash-dot waveform, while Figure ___ shows the resulting transmitter output if the 'mark' allows the carrier to be transmitted and the 'space' cuts off the transmission. Thus, the carrier is conveying intelligence by simply turning it on or off according to a prearranged code. This type of transmission is called 'continuous wave' (CW); however, since the wave is periodically interrupted, it might be more appropriately called 'interrupted wave.' As a concession to the CW misnomer, it is sometimes called 'interrupted continuous wave' (ICW)." (pp. 237-238)

Finally, Miller discusses one of the shortcomings of Morse radiotelegraphy which helped lead to the development of alternate forms of coded transmission:

"CW is a form of AM and therefore suffers from noise to a much greater extent than FM systems. The space condition (no carrier) is also troublesome to a receiver, since at that time the receiver's gain is increased by AGC action so as to make received

noise very troublesome. Manual receiver gain control helps but not if the received signal is fading between high and low levels, as is often the case. Its simplicity and narrow bandwidth makes (sic) it attractive to radio amateurs, but commercial users resort to two other types of code transmission." (p. 238)

Editor's notes:

1. The other two types Miller refers to are two-tone modulation (known in the past as AFSK) and FSK.

2. There have been advances in AGC, even at the amateur equipment level, which render Miller's comments at least partially "overtaken by events" in that regard. I'll resist the temptation to discuss some unique and advanced AGC technology of recent vintage which I'm familiar with, chiefly because it has not found its way into amateur equipment and is still used for primarily military applications.

Hope this article is of interest and provides some useful information to readers of this group.

Is Southern California going to some sort of lottery scheme for repeater
allocations? If so, the family has lots of tickets.

> AA6KT:
> KE6TXF Southern California Amateur Radio Organization
> KE6TNU Doodlebug Amateur Radio Club
> KE6SZO Adirondack Amateur Radio Society
> KE6SZN Watertown Amateur Radio Society

The last 2 are interesting in that they leave the SoCal motif.
"Adirondack" is a moutain range/region/park in northern New York and
Watertown is a town in the Adirondacks.

Well, lets see, the SERA directory shows 49 70 cm repeaters in the
Atlanta metro area, all are open repeaters except one. There are
approximately 4,000 amateurs in metro Atlanta. While there is some
crossover in the technical committees of those machines, a guess
would say that about 250 amateurs are actively involved in building
or maintaining those machines. *But*, some 4,000 amateurs are welcome
to use them. Only one channel pair holder locks out the general amateur
community from operations on "his" bit of spectrum. That's unfortunate,
but not a serious problem for now.

Most of us realize that we're holding public spectrum in trust and
keep our channels available to the general amateur community. It's
a matter of keeping faith with our obligations as stewards of that
public spectrum.

I checked with the Supreme Court and found that it would be quite legal for me to spit on the sidewalk directly in front of you - let fly with a big fat, thick, brown and yellow sidewalk oyster.

COURTESY says I wouldn't do it -- legal or not. Many of our ham radio brethren out there have forgotten what that word means.

I'd like to hear the bloody hell that would break loose if SSTVers or AMers or GTORers started spreading out all over the band anywhere Part 97 said they could go, instead of trying to keep it to a few spots not to "bother" the guys running slop bucket with the compression cranked to infinity, the screaching DX mics, and 4CX10000 amps.

It may seem a bit foreign, but I never had to check the FCC regs to decide whether or not to stomp all over somebody elses QSO ......

? Does the new Delorme software support input from any NMEA capable
GPS? The version 1 software I have shows a GPS button, but it is
not enabled, and the info says it can only be enabled by buying their own
GPS and computer hardware, the cost of which was supposed to be more than
the above for the Delorme stuff alone. I know that there is at least a
version 2 out. Does it do GPS?

>
>
I have been an APRS user, on and off from the start as well, but I don't
think I can agree with the comparison of USGS/APRS maps to the Delorme
maps, unless the MAC map generator is much much better than the PC based
versions. First of all, the USGS DLG data does not have any town or city
names, etc, and as far as road names only has numeric US and state highways,
but does not have road names like Maple Lane. Also, the new Delorme has
street numbers, which is very handy. I know that there is/are additional
USGS files containing town names, etc, but I don't think there is any

way to get them into the APRS map files, at least with the PC software. Another problem with the PC software is that the size of the APRS maps is limited to something like 1900 lines (at least with the version I have), and if you use an entire DLG data file, you can't get down to the same level of precision as the Delorme without breaking the file down into sub sections. It is also VERY confusing with respect to how to join two maps together. I agree that the USGS data is the same, and actually has a bit more detail available than that used by Delorme, but the work requirred to generate the maps is extensive with the PC software. I have both a PC and a Macintosh, and would be very interested in a description of the capabilities of the MAC based map drawing software with respect to the above mentioned deficiencies in the PC software. Also, where is the MAC software available via FTP?

Thanks. de N3JLQ wejones@cbda7.apgea.army.mil

3559. HTX-202 TNC(able)

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-23 00:00:00 UTC
From: murso@fnalv1.fnal.gov
Message-ID: <3pt84r$lnh@fnnews.fnal.gov>
Source record: 246024

Maybe I should clarify just what I meant when I said that the 202 isn't exactly TNC compatible. There seems to be a lot of usage of bandwidth both in E-mail and the groups. So far only one reply stated what I meant when I made the statement. The 202 does not have a specific connector for a TNC like the other 2m/440 rigs I own. This to me means cable swapping to use the 202 for voice or packet is required. Not many HT units have a port to be used for TNC, but I was comparing it to the units that do. Apples and oranges? Yes, but that was the point. You don't often buy a HT when you are going to be heavy on the packet usage. It just makes a good entry level 2m ht. You can use a Corvette to pull stumps with, but I don't think that is what it was designed for.

>networks on broadcast transmitters.

While "plumber's delight" construction will solve most static problems, in those cases where the antenna can't be constructed to be at DC ground, a high value resistance to ground can be added to dissipate static buildup. For example, a 10k resistor across a 50 ohm feedpoint will have negligible effects on signals, but it will rapidly drain away static on the antenna. The voltage may be high, but there is little current available, so it doesn't take much of a leakage path to discharge the static.

>although it recovered, it could not provide emergency service even in a
>very small and localized emergency situation. I imagine that a
>widespread disaster would have brought about cellular constipation much
>more quickly.

No doubt the cellular system returned busy to many customers, but it also delivered communications services to many others, those generating the busy. Now a cellular system is licensed for 400 channels. Depending on the reuse patterns of the individual cells, and on the geographic area we want to include, how many messages are passed before the first busy? Now, how many amateur messages got passed in that same area in that same time? How many amateur repeater channels are active in the area? And how long does it take to make them all "busy"? I'd suggest that the capacity of the amateur systems is orders of magnitude less than the cellular system.

Of course the great advantages of the amateur systems are their ability to transmit one to many, and to manually prioritize messages. But the odds of getting a "busy" on the amateur systems is still much greater, even though there are several orders of magnitude fewer "customers" to be served.

Questions that need to be considered are, "How many *days*
passed before that H&W message to Aunt Minnie arrived?", and
"How much quicker did the cellular system finally give a
dialtone to allow a direct call to Aunt Minnie?"

Gary

3562. Re: a shocking experience

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-23 00:00:00 UTC
From: elmore@rap.ucar.edu
Message-ID: <3ptb93$jb0@ncar.ucar.edu>
Source record: 246027

Precipitation static usually won't develop large potentials on antennas, though snow can as can dust in clear weather. Precip static is more commonly due to small charges carried by hydrometeors. This charge is deposited on an antenna when struck by the hydrometeors and every raindrop or snowflake that hits makes a tiney "pop". So mant strike the antenna that it soudns like static, especially in an aircraft.

What the original poster prbably experienced was an enhanced electric filed gradient typical of convective weather. I have heard my antennas go into corona as weak thunderstorms pass over and have measured the corona current as several mA. this I noticed when I got bit removing an antenna as a storm approached.

Grounding antennas will not stop the corona current and, near the ground, there is little that can be done to saturate the air and reduce the electric field gradient since *everything* is in corona (trees, grass, houses, cows, you name it). Typical electric field strengths near the ground never exceed about 50 kV per meter because of corona saturation. Thus, the staic discharge brushes that are sometimes used to protect antennas are of dubious value, though the idea is commendable. This is why it is difficult to "deflect" lightning near the ground. Also, the lightning discharge process itself tends to produce its own local electric field which keeps it going. Corona ionization cannot keep up with the induced electric feild cahges that occur as part of a discharge event.

Also, intercloud as well as cloud-to-ground lightning dischages can lead to very large induced voltages along with fast electric field changes causing momentary increases in corona current and arcing across antennas. The charge separation process within thunderstorms is not well understood and much debate exists about it. About all we know is that there must be a mixed water phase to get much separation (there must be ice and liquid water existing in concert along with super-cooled liquid water).

None of this stuff shoudl be trifled with. While it is possible to protect ourselves against close strikes, protection against direct strikes is expensive and must be painstaking to be effective. Lightning is a bit like the proverbial 600 lb gorilla: "Where does it go?" "Wherever it wants to!" Obviously, broadcast facilities *do* protect themselves against direct hits because they absorn them all the time; engineering firms make their living doing just that, but it's lots more expensive than intelligently disconnecting yourself from possible lightning entry in the first place!

>4CX10000 amps.

Sad to say, Grant, the problems you allude to are as old as ham radio.
In fact, the term "slop bucket" which you used to refer to the SSB
"interferers" was coined in the 1950s when AM ruled 75 meters and a SSB
station, trying to find an innocuous corner from which to carry on a QSO,
might end up being chased from the band with insults.

So, now it is the SSTVers trying to find an "innocuous corner" and the
"slop buckets" who are doing the chasing; same deal, different players.

As one who occasionally contests (although only on HF CW, with 75 w.,
or VHF SSB, with 140 w.) I'll have to admit that (1) yes, they are kind
of fun, but (2) they do hose up the band for those not involved.

Sorry, I don't have a solution, but I do understand your frustration.
And yes, some people are just plain selfish about it.

I have had nothing but problems with it.It was great for about a year
and then one day I was told I could not be copied when transmitting
because I had a squeal on my carrier. When I sent it out to be fixed it
worked great for about two months then it would transmit a carrier but
with no audio. I waited a few months to have it fixed since by his time
it was no longer under warranty and I didn't have the money to get it
fixed. Then the same problem came back after a month. I was feeling lazy
at the time and it was near 100 degrees, so i didn't ever take it back
until about 6 monhts later. When they "fixed" it, the same problem
surfaced that very night after 5 minutes of qso. Then i took it bck
again and this time they wanted to charge me for whatever parts they
"replaced". They told me that hey had "replaced the main board" and
after fighting them on the subject for three weeks I got my radio back
which lasted for a whole three qsos. Needless to say i am very
dissatisfied with rat shack and I wont be going back unless it is an
emergency. The only accessories i have ever used with this radio have
been the rubber duckie and the rat shack power supply. Has this happened
to anyone else or am I an enigma?

> Mike KB9KFE

Mike, I understand what you are saying, but here in the Louisville area HTs of all types are popular for packet. Many hams around here bought used HTs at hamfests *just for packet* usage. Maybe in your area this is not the case.

However, you used the term "entry level" in regard to the HTX-202. Again, I don't understand what you mean by this. The 202 sounds great, has exceptional intermod rejection, has 2 power levels, has a touchtone pad, has sub-audible tone capability, and more. Plus, at 13.8 volts it puts out about 10 watts! I know several hams who have really nice Icom and Kenwoood HTs that do a great job, but not any better than the HTX-202... Sometimes worse. What about the HTX-202 makes it "entry level?" The price? The fact that it doesn't have a dedicated packet port? The size?

>or what this is.

Wayne,

I couldn't get a straight answer from anyone around here either, so
I just sent the cards to HQ and got the approval note back within a week
or so. The certificate arrived a couple of weeks after that. I recommend:

a) send the cards and application by Certified Mail, *return receipt
requested*.

b) include a check large enough to cover Certified Mail return of the
cards.

That's all there is to it, and ignore the note on the application about
"not sending cards to HQ if they can be checked locally." That's supposed
to be a *convenience* to the applicant, and if it turns out to be a hassle
just send the cards to Newington.

Congratulations, BTW.

73,

Paul, K4MSG

Well, maybe my ignorance of area use is showing, I don't know of many around here that us HT's for packet. So you may be totally correct in a broad spectrum of areas. There are probably many HT's used for packet and I stand corrected on that area.

>73 de Kevin (N9RMG)

The price is what attracted many of the new hams in our area. Most of the people I speak to are using a YaeComWood dual bander as their primary HT. And then have a 5/50 watt mobile at home to do packet duty and more. So the "entry" into 2m can be expensive and the HTX-202 changed a lot of operators minds. They may have a fully capable mobile, but having a 2m HT also was a nice option that they now could afford. I wouldn't have it if it wasn't for the price. I would have stayed concentrated on HF and my FT-840. If you have the specifics on the TNC cable for it I would be grateful for info on it. It may be my ticket into packet. I had written off packet as out of my budget.

I appreciate your comments Kevin, and all comments that concern this area. For many years I worked HF never having any interest in VHF (I was licensed in HS but during college I lost interest and let my license lapse, for 15 years) and I guess that starting over I now see both sides of the street.

>
Your intial posting said that we (US hams) can get a real bargian
due to the exchange rate of the US # & the VE $. I don't see any
such bargains.

Taking a quick browse of the sample ads you sent I conclude that
the prices shown for *used* equipment, towers, antenna, etc. are
way over priced, not just due to the exchange rate difference,
It seems that many have overpaid for this equipment, and trying
to recoup as much as possible, make the selling prices higher
than in the US.

To wit:

:::7 Element TH7 Thunderbird tri-band beam complete with cables - $700.00. Neg.
I can buy a used one here for $325 USD.

:::FOR SALE: Heath SB220 amp. - $850.00.
Worth here abt $500 max.

:::FOR SALE: Ten-Tec Omni 5 HF xcvr with 6 filters - $2000.00.
Give me a break.

I guess its: Cavaet Emptor.

3573. Re: HTX-202 TNC(able)

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-24 00:00:00 UTC
From: wday@dfw.net
Message-ID: <wday-2405950926080001@fw23.dfw.net>
Source record: 245889

In a previous article, Mike KB9KFE said the RS HTX-202 was not packet compatible, which he later clarified to mean that it didn't have a separate and dedicated TNC plug, and then admits that none of the HTs he knows about have such a plug, either. OK, but then he shoots himself in the foot:

murso@fnalv1.fnal.gov wrote:

You don't often buy a HT when you
> are going to be heavy on the packet usage. It just makes a good entry level
> 2m ht. You can use a Corvette to pull stumps with, but I don't think that
> is what it was designed for.
> Mike KB9KFE

Pardon, Mike, but making assumptions like that will get you into areas where you don't know what you're talking about.

According to the folks that designed the radio (they're locals, here, in the Fort Worth area and have freely talked about what they were looking for when they set up the radio), packet was a PRIME consideration for them going to direct FM modulation in the 202, since that modulation scheme lowers the probability of distortion of the transmitted signal.

And yes, some of us DO buy HTX-202's with the idea that we're going to slap it onto a TNC and very rarely run it anywhere else... mine does 24-hour duty (with rare exceptions) as my transceiver on the local DX Packetcluster system. I don't need more than a watt to get to my local node, so why would I want to spend more for a larger radio? If I need a 2m boom boox, then I just dial up the 440 remote (175 watts from a real, tall, omni antenna!).

Source record: 245891

I just got off the phone with Al Kaplan of Timewave, Inc.
He informed me that there is a bug in the interigmn firmware
release, Ver. 3.01. The problem manifests itself as a continuous
carrier when the RTTY remodulator function is engaged and there
is no signal present. The manual says that the DSP should go quiet,
mute itself, in the absence of any discernable signal.

The fix: Simply call Timewave (612-452-5939), tell them of
the problem, and the updated EPROM will be on its way.
Exceptional service from an exceptional company.

SPECIAL EVENT STATION CELEBRATING 100 YEARS OF MARCONI WIRELESS

Metropolitan Community College, Omaha
Aksarben Amateur Radio Club
Southwest Iowa Amateur Radio Club
and many others

are pleased to honor Guglielmo Marconi and the 100th anniversary of wireless communications. A special station, using call W0GFQ, will operate Saturday and Sunday, 27 and 28 May, on the grounds of historic Fort Omaha in Omaha Nebraska.

Working all bands, amateur operators will be using a 5-1/4 wave (at 20 meters) rhombic antenna, a 500+ ft long-wire antenna, and a 160M dipole the entire weekend. QSL cards commemorating the event are available through Paul Marsh N0ZAU, at P O Box 3777, Omaha NE 68103 USA, or Todd Lemense, KE0EJ. Amateurs will also be demonstrating packet radio, ATV, and other modes of communication.

Leo Meyerson, founder of World Radio Laboratories, is honorary chairman of the event, and will be speaking at 1:30 pm on the college campus. The special event station is using Leo's W0GFQ callsign. Radio equipment from the past, many pieces collected by Leo Meyerson, will be on display, courtesy of Omaha's Western Heritage Museum.

An amateur radio flea market will be held 8 am to 10 am Saturday 27 May on the college campus. No fee; bring your own tailgate, table or whatever.

Amateurs and visitors are welcome to participate any time. If you'd like to use one of the antennas, contact Paul N0ZAU at 402-449-8424 daytimes, or 402-453-7627 evenings, or at the e-mail address below.

The station is located on the Fort Omaha Campus of Metropolitan Community College, at 30th and Fort Streets, Omaha Nebraska.

Paul Marsh N0ZAU Omaha

I think that some of you dont know that this list is, I presume,
gatewayed bidirectionaly into the USENET group rec.radio.amateur.misc.
Once you gateway into a USENET group, you have to expect a high signal
to noise ratio.

USENET is, IMHO, a better interface to reading the information here. I
would recomened to any one in James' postion to find a way to read
this group in USENET, rather than from the list, if you can.
Otherwise, there is no way to stop progress :)

Bob.

I see that the out of town contingent is still going strong with their opinions about frequency coordination in Southern Cal.

The fact is that 440 belongs to all hams, and that it is a privilege to erect a repeater. There are more people with the interest and wherewithal to put up repeaters than there are frequencies to accomodate them. Accordingly, it is completely inappropriate for a few selfish persons to appropriate these frequencies, which should belong to all, and restrict their use to their friends, businesses and families.

The present situation has got to go. Fortunately, since the FCC clearly will not get involved in frequency coordination scuffles, and SCRBBA has zero popular support among the amateur community in Southern Cal, the means to eventually get rid of SCRBBA plainly exists.

The unit is known to not work well on 13.8v with the rubber duck. Also,
it sounds like your power supply may have been suspect. I've had squeal
on a signal when using a power supply before. Did you try various means
of power and power levels?

What you really seem to mean is that you simply don't like dealing with
people who have opinions different than your own. When some of us who live
here and know something about the situation point out problems, your
response has largely been to make self-rightious comments about how we
should be doing more.

Maybe we will do something. But we will discuss it first, as we are doing
now, in order to get everyone's perspective. Even yours, Mr. Reese.
However, you seem to find this process excruciating, judging from the
personal comments you have made, and the self-rightious tone of your posts.

That's something I've noticed about the iternet: for some reason, although
people on the air are normally pretty darned courteous, and averse to
slinging insults, lots of that goes on in these posts. Too bad.

I hope I haven't offended you by saying this, but that's how it appears to
me.

This was beautifully put. And this attitude is exactly what is missing in Southern California. You are fortunate to have a group that takes this responsible attitude. It is what we need here.

3584. Motorola MT-2000 and VISAR Programming?

Date: 1995-05-24 00:00:00 UTC
From: jason goldring <jason.goldring@sheridanc.on.ca>
Message-ID: <D93BwJ.J9v@eclipse.sheridanc.on.ca>
Source record: 245900

Does anyone know of a "cheap" way to program the MT-2000 and the
VISAR portable radios? Apparently, Motorola charges $650 just for
the programmer, and they also request that you are a Motorola dealer
to obtain the equipment. My intention is to program the radios
for an LPU frequency for security guard use.

Any info would be greatly appreciated!!

My understanding is that, by law, all stores that take credit cards and do not charge a surcharge must give you a discount if you pay by cash/check/money order. The reason being is that banks typically take 1%-4% off the top of the bill for credit card usage. The merchant receive no less money than if you had paid by credit card. Some merchants are very reluctant to honor this procedure, but it is the all--you will probably have to speak to the manager.

Not much of a discount, but 3% (which is the average) is SOME money back in your pocket.

Not to mention that, regardless of how many times Gary says "Morse is not a language", some ops can in fact read it just like any other language. Do you read each individual letter here, or do you read the words? I read the words, unless I hit an unfamiliar one. Some CW ops read the words, also. I have met at least one who can copy 60 WPM. You don't hear individual letters at that speed.

In fact the law says the merchant cannot charge a surcharge for a credit card,
if he chooses to accept them at all, which he is not required to.
On the other hand the merchant MAY offer a cash discount. (Yes I realize
this is logically the same thing as a credit surcharge, but when has the
law been logical?).

Note that the merchant does not HAVE to offer a cash discount, but is merely
permitted to do so.

>portable with my HT. If San Bruno is accessable, I may go there
>instead,

There is a road to the top of San Bruno, but I've never used it. One
problem with it and Mt. Sutro is the large commercial towers there;
the high RF levels near the towers might cause intermod or desensing
of one's receiver. One way to find out is to try, of course, and
if you do I'd sure love to hear how it comes out. However, if
you don't want to run the risk, how about Mt Davidson or Twin Peaks?
(I'd go for Mt Davidson first, personally -- Twin Peaks has a couple
of city radio transmitters, isn't all that far from Sutro, and is full
of tourists that might try your patience with questions.)

Mt Tam is accessible (drive to nearly the top and then hike the
rest of the way, or bike.) Mt Umunhum in the South Bay is NOT
generally accessible (and full of commercial repeaters).

Sweeny Ridge, in the GGNRA down in San Mateo County (take
Sneath exit off 280 west to the gate, then bike/hike up the
path) would be a fine spot too.

Cellular-Cancer Suit Dismissed
By STEVE GEIMANN
Senior Editor, {Communications Daily}

A federal judge in Florida dismissed first lawsuit that sought to link cellular telephone use and cancer in death of Tampa woman, saying evidence failed to meet judicial tests for scientific evidence. Judge Ralph Nimmons, in ruling issued last Wednesday, said documents submitted by David Reynard hadn't been subject to peer review and in several cases contradicted claims made in lawsuit. "The court finds that there is no genuine issue of material fact with regard to the plaintiff's wrongful death claim," Nimmons wrote. He said Reynard didn't respond to company's motion to dismiss.

Cellular Telecommunicaitons Industry Association President Thomas Wheeler, in news conference Thursday, hailed decision as "seminal." He said: "The scientific evidence presented was not credible science." He said industry-sponsored research, under Wireless Technology Research Group, will continue despite dismissal. Group this week awarded three contracts for research.

At least four other cases are pending alleging link between phones and health problems. He said courts have joined with General Accounting Office and Food & Drug Administration in "finding no credible scientific evidence" of problems. In one case, in Cook County (Chicago), judge said evidence "didn't even come close" to linking cellular and cancer.

Reynard filed suit in 1992 against GTE Mobilnet of Tampa, NEC and GTE, charging cellular radiation "irritated or accelerated" growth of brain tumor that led to death of his wife.

Nimmons said: "The only medical evidence on causation submitted by the plaintiffs is the affidavit of Dr. [David] Perlmutter, which the court does not establish as a material issue of fact. There is no proffered evidence that the studies, analysis and conclusions of Dr. Perlmutter's affidavit have been subjected to the normal scientific scrutiny through peer review and publication. Additionally, the conclusions of the affidavit are not supported by any objective sources, such as a treatise or a published article in a reputable scientific journal."

This is from Peter Huber, who works at the right wing Manhatten Institute.

I wonder how much of this "unused spectrum" that he refers to might be in the ham bands?

I wonder how hams and other public users of the spectrum would fare in Huber's perfect "free market" world?

Manhattan Institue for Policy Research. This and other articles by Mr. Huber can be seen at http://khht.com/huber/home.html.

THE FCC COULD HAVE A GOING-OUT-OF-BUSINESS SALE

Copyright 1995 by Peter Huber. Electronic copies of this document may be distributed freely, provided that this notice accompanies all copies.

Here's how Congress can raise $10 billion a year and cut government at the same time. No new taxes. No phony accounting. No leveling the timber in national parks. No kidding.

Economists have known for years that the best way to manage the airwaves is to sell them off in orderly parcels, and then let the market decide how best to use them. Recently, however, economists have been putting numbers to this argument. The numbers are stunning.

Congress nationalized all radio spectrum in 1927. Ever since, the Federal Communications Commission has been zoning chunks for one use or another -- radio, paging, satellites, whatever happened to hit the commission's fancy -- and then assigning allotments to favored applicants who promised to use the spectrum accordingly. Until recently, no money changed hands, just political favor.

The secondary market, however, gives us a good idea what those individual licenses are worth. When a company like McCaw sells to AT&T for $17 billion, it's easy enough to infer the value of the FCC licenses in the transaction. On that basis, the commercial spectrum currently used for broadcast, cellular telephone, satellite and so on is worth somewhere between $100 billion and $300 billion. If all spectrum were leased on long-term contracts rather than sold, it would generate additional federal revenues of $10 billion to $20 billion a year. This compares with $3 billion currently generated from offshore oil and gas leases and royalties, and $28 million generated from federal grazing fees.

To its credit, the FCC recently took a first, reasonably successful, stab at selling off spectrum licenses. In the last 12 months, the various auctions of ten-year licenses of spectrum for so-called personal communications services (meaning: cellular phone service) have raised about $10 billion. The commission would have raised even more if ownership had been sold outright.

The FCC and other government agencies are sitting on billions of dollars of additional bandwidth, which remains idle while federal bureaucrats ponder how to assign it. The creation of the cellular industry, which today generates $20 billion or so a year in revenue, was delayed for a decade while the FCC fretted about whether and how it should allocate spectrum to this newfangled use.

It's a safe bet that there are other $20 billion industries just waiting for the FCC to awake from its slumber.

Spectrum that has already been given away presents a more subtle financial opportunity. Buyers in the secondary market -- AT&T, for example -- can cogently argue that they already paid for their spectrum when they wrote a check to primary licensees like Craig McCaw. At this point there's no fair or politically feasible way for the government to reclaim those licenses.

But even here, the FCC still has something very valuable to sell. The FCC never quite gave away spectrum to anyone -- it issued fixed-term licenses. The property, in theory, reverts to the FCC when the leases expire. At present, licensees spend lavishly on lawyers every time they renew or transfer a license. Quite often they have to buy off challengers who file objections for the sole purpose of legal extortion. Existing licensees would pay good money to convert their lease into ownership free and clear.

Yet another way for the government to raise a chunk of money is to sell legal erasers. At present, spectrum licenses are strictly zoned. If you're licensed to do television, you may not use your spectrum to do wireless telephony. If the FCC authorized just one UHF television station in Los Angeles to transfer its spectrum to a third cellular provider, the overall public gain would be about $1 billion, or so the government itself estimated in 1992. Nextel was created in just this way, by an entrepreneur who bought up taxi dispatch licenses and then persuaded the FCC to rezone them for digital radio services. Deleting a few lines of legal boilerplate from all outstanding FCC licenses would create tens of billions of dollars of new national wealth.

Which means that the rights to erase that boilerplate are immensely valuable. They, too, can be sold. Sold they should be. These rights are currently in the wrong hands. While the FCC owns them, they just make work for bureaucrats and inflate the FCC's already bloated $200 million annual budget.

The opportunity here is almost too good to be true. A single, clean piece of dezone-and-auction legislation will raise money, shrink

government and unleash private enterprise on the wireless lanes of the infobahn industry. Someone should write it.

On 24 May 1995 16:08:03 GMT Ken Edwards (cnc23a@b4pph13e.bnr.ca) wrote in rec.radio.amateur.misc:

: The message I sent was bounced, looks like a bogus address....

In the newsgroup where I first read this garbage the return address was not valid (there was a numerical name with no domain). I tried to reply by mail to that name @baygull.rtd.com, using as the domain the source of the posting. That bounced, but a forward of that to postmaster@baygull.rtd.com hasn't bounced (no reply yet, though).

Every site should have a postmaster; one can hope he or she will give the user who originated the message a little talk about proper use of the net.

Please note: posting replies to this kind of thing on a newsgroup is not an appropriate way to reach the originator of such an attack, although it may be appropriate for discussion of the attack. But note also that when these things are cross posted to many groups, as this one was, any followups will go to all the newsgroups listed, and this is probably not a good idea. In this followup I edited the header to restrict it to rec.radio.amateur.misc.

In my attempt to directly reply to the perpetrator I suggested that if his behavior continues future replies might include large binaries that would choke his mailbox and do unpredicatable things to the perp's terminal. Not that I intend to do that, :-), but anyone who writes a message soliciting a reply and can't manage to have it contain a valid return address might benefit from a little scare.

Please let me know if there is an FTP site or somewhere that has
a "freeware" or "shareware" logging program available; preferably one that can
handle repeats entries, etc.

I'd like to get setup in time for Field Day. Thanks!

BettyAnn, KC6ING

In article <3pvtmm$o76@uuneo.neosoft.com> jreese@neosoft.com (James Reese) writes:
>They're not meant to be self-rightious, but I think you should help solve the
>problem instead of just complaining about it. Have you even tried to
>cooperate with SCRRBA? Or have you just assumed they won't accept your help?

Sadly to say, there are people who I've talked to that have tried to work
with SCRBBA. Unfortunantely unless you are well connected with SCRBBA, your
chances of getting a pair for a repeater are impossible. The only other way to
guarantee a spot is to team up with a willing party to have secondary status
to a frequency pair that is willing to share the pair.

James, I'm not sure if you aware of what the 440 spectrum looks like
in SOCAL, but that band is almost completely locked out by private and closed
systems. I don't have the figures in front of me, but I think there are less
than 25 open machines between 445-449.975. I'll check up on this and post
my count. Is there another area that has the same ratios of
open:closed/private systems? I took a trip to Northern California, 440 was
much more open and serves the ham community much better (IMHO).

Now I am not in favor of dumping the coordinating group here in SO CAL. But
with the coordination of repeaters for the ham community can stand for
improvement (lots of improvment). Unless something is done to address the
problem of congested frequencies, I see no other course of action. SCRBBA is
not working with the ham community, nor is there any evidence that they plan
to in the applications for frequency pairs on 440.

There is a group that is planning on putting up a machine on 440 that I'm
watching from the sidelines. They have tried to get in touch SCRBBA, but
no response has been received. They plan to open up a machine on a pair
that so far has had no activity (for 4 days from what I understand) without
the blessings of SCRBBA. What other course of action can a group take if
SCRBBA ignores them?

3607. Re: Aerostar mobile mount

Message-ID: <D93tHI.9CC@avalon.chinalake.navy.mil>
Source record: 245923

1. Use a perminate magnetic mount.
2. If you do not have a luggage rack for the roof, get one. You can use the Comment or other 3 axis rotating mounts on the FORD carrier. If you have/get an after market type rack you can use regular clamp mounts. I often use generic 3/8 in CB type clamp on mounts and ream them out to a 5/8 hole and put a PL259 chassis through barrel for Diamond and Commet antennas. Larsen makes a PL259 to NMO adapter kit available for about $7.00. You may need a few 5/8 washers to seal things up on some antennas. If you use this trick remember to mount the base of the antenna close to the roof as possible to maintain good ground plane continuity. If you have a van roof you just as well take advnatage of it.
3. Add a bicycle/ski type carrier (clamp on) and do the mounts from item 2.

Have a good day.

Bill Harwood -- AB6DY

Remember,
One NMO mount makes it cellular ready when you go to sell it

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 MAY AND FORECAST FOR 25 MAY - 27 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 67/0

GOES satellite data for 23 May
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 May 26 May 27 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 May: 67/0

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active, with brief minor
storm period 03-06UT

Estimated Indices : A K Observed A Index 23 May
Learmonth 21 3544 3332
Fredericksburg 20 15
Planetary 30 12

Observed Kp for 23 May: 2122 3344
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
25 May 20 Mostly unsettled, with possible active periods
26 May 10 Quiet to unsettled
27 May 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 14 was issued on 17 May and is
current for interval 17-25 May.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
24 May normal normal-fair poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 May normal normal-fair poor-fair
26 May normal normal fair
27 May normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
24 May 24 near predicted monthly values, with blanketing
sporadic E observed at 15UT.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
25 May 10 Near predicted monthly values
26 May 15 Near predicted monthly values
27 May 15 Near predicted monthly values
COMMENT: Obs Townsville MUFs: near predicted monthly values.
Obs Hobart MUFs: 20% depressed in the first half UT day, near
predicted monthly values otherwise.

Would you like this graffitti problem in your neighborhood? The inner cities look like Hell, because no one cares. These commercial cd-rom folks will stop advertizing in our Amateur Radio Magazines and post here for Free. Do you want all the nuts and bolts magazine ads in our news groups? Hunderds of those little ads every week over and over. Then no more ham magazines...

Many good points, Bob. But i can skip over those, and i can often tell in advance of seeing by the large number of likely-to-be flaming replies attached to it. <GRIN> I can go to their WWW site if i choose to, and who knows; they might even do something cliever like include some useful things there which could encourage one to order the whole thing. What has me much more worred is junk e-mail, things that appear, unsolicited, in our e-mail (which many of us have to pay for) from these kinds of operations, simply because we posted here. Getting alot more of those really is going to be a problem.

Almost as bad as the SALE@ALLUS on amateur packet. Does anyone really read all that junk? Oh Sure! go eat a cookie.

<MUNCH> Yeah, and it won't be quite so bad if there was enough bandwidth to support it, and clever news readers. But if you get someone who hasn't connected to their packet BBS in a week or so, and merely goes to list the summary lines of everything they haven't read since then, that alone can practically saturate the pathetic 1200 bps channels that most people use in the S.F. Bay Area. It's both a bandwidth problem nationally, and in many cases locally, aggravated by junk-box human interfaces. <SIGH> [Sorry, folks, i guess i've just had a hard day]

THE KEY TO ORGANIZING YOUR HEALTH RECORDS

"If you care about yourself and your children, you will do everything you can to know your family's medical history. It can save your life, and the lives of those who are dear to you." -- Dr. Aubry Milunsky, Director, Boston University's Center for Human Genetics (Life Magazine, March, 1995).

Your Lifetime Health Planner offers the simplest, most effective way to take charge of your health. Enter important facts about your health history, keep a record of the names of medications and their effects, document each doctor visit and diagnosis. You will have the information you need, and in the event of an emergency, so will your family.

Your Lifetime Health Planner, 198 pages in a compact, loose-leaf binder, contains a variety of sections which include "Doctor Visits," "Medications," "Family Health History," and "Doctors and Specialists." The Planner is a must for the busy executive who needs to stay organized, for seniors who are receiving care and for newborns who need a record of their health care.

Parents Magazine recommended the Planner to its readers (April, 1994) and MCI called it "a useful resource in managing your personal health records." Margie Smotherman, Coordinator, Employee Health and Wellness, Blue Shield/Blue Cross of Iowa, said: "The employees felt that these (Planners) were great tools to not only record their pertinent numbers, but to plan for doctor's visits."

To get your copy, send a check or money order for $19.95 (plus shipping and handling) to :

>of some sort coming from the antenna? Should I dismount the mag mount
>in storms?

You have a situation called 'precipitation static'. This comes from
charged particles
(rain) hitting your antenna.

Solution 1, remove antenna

Solution 2, get an antenna that has continuity between whip and ground. SOME
5/8 wave
antennas do BUT not all. The make sure your antenna system is grounded.

Solution 3, add a static suppressor, and ground it. Make sure it's good at VHF

Solution 4, consider Larsen's or Mobile Mark's VHF on glass. We use the
commercial versions and have good results. Of course NO static here.

: "Cellular phone users frustrated because of overloaded channels"

: Note from poster - There was a force level 4 tornado that swept through
: northern Madison County in North Alabama Thursday afternoon May 18 and
: destroyed many houses. This article is one of many on the resulting
: tragedies.

(some stuff deleted)

I certainly can not claim much knowledge about cellular but I am under
the impression that some cell sites are connected to each other and
to the Mobile Telephone Switching Office (MTSO) by microwave and some
are connected by landlines which are part of the regular hard-wired
public telephone network.

It seems likely that when the public network tie lines or Central
Offices are overloaded as they would be in a major emergency, calls
will be delayed when they need to be routed from one cell site
to another.

Could anyone who knows let me know if this is really the case?

Thanks,
Jack

I'm building a system now which will consist of a dipole fed with
ladder line. The tuner consists of a floating PI network which follows
a balun that has *no* DC connection to ground at the secondary.
The antenna will be non-resonant, and I expect to see very high
impedances on certain frequencies.

Considering that RF across the feeder could easily exceed
3,000 volts or so, would a larger value resistor (say something
around 10 Meg) still be effective in bleeding off the static? If not,
is there an alternative technique?

I would like some info on the Friedrichaven fest.

When is it?

Exactly where is is?

Is there a flea market as one finds at fests in the US ?

If there is a flea market, what is the best day to go for that ?

How much is admission?

Is there a parking problem?

I'm near Wurzburg, looks like a straight shot down A7 to Ulm then
South on 30 ?

thanks

Bill

Greetings, everyone-

As an active contester, I wish to respond to this gentleman's comments.

In a previous article, k1oik@ccsnet.com (Burt Fisher) says:

>activity. I have never done it myself but many hams do. My first question
>is, WHERE is the challenge to running 1000, 1200, 1500 watts (and
>more...you KNOW there are guys running WELL beyond the legal limit!), all
>the while splattering your dirty, over processed "CQ" and "QRZ" 50 Kc in both
>directions?

I think it is a SIGNIFICANT challenge to work as many stations as
possible in a 48-hour period. A station operating a contest from the
Galapagos Islands a couple years ago made more than 10,000 QSO's in a
weekend. NO small feat...certainly not a feat that ANYBODY could perform
(some would argue "why bother?", but that's a different discussion, and
one I'll be glad to entertain at another time).

Second, not all contesters run amps. Most (80-85%) of my efforts as a
contest entrant as a "single-op" (as opposed to a "team" effort) have
been 100w, with several QRP operations. In the ARRL November Sweepstakes,
100w is the most popular entry category.

Thirdly, I feel that contesters are probably some of the most honest
operators on the air today, seconded only (PERHAPS) by hard-core DX'ers.
What's the point in claiming victory if you cheated?

If you compare the contester to your average 75-meter op, I feel there's
no comparison. The vulgarity, frequency "ownership," and condescending
attitudes found on 75 meters FAR outweighs ANYTHING I've ever heard
during a contest. If a prospective ham were in my shack, the LAST thing I
would show them would be 75 meters.

Illegal amplifiers? I'd bet you dollars to doughnuts there are more
75-meter ops that use them per capita than contesters.

>
>Secondly, and this is where this whole editorial comes from, WHY do you
>feel the need to drop your stupid CQ right in the middle of the SSTV net
>freqs? SSTVers as well as AMTOR, RTTY and Packeteers all have to compete
>with all sorts of "natural" problems (QSB, QRN and QRM, etc.) but during
>contests a bigger, uglier problem arises. It seems that during contest
>weekends, the morons crawl out of the wood work and forget all the
>protocols...all in the name of contesting. The SSTVers (as well as the
>other digital mode-runners) only have a TINY slice of spectrum that they
>occupy on 20m (14.230 to 14.235). Many SSTVers are FORCED off of the air

>during contests because it is literally impossible to send video with all
>of the splatter and all of the jerks that hear a "clear" freq and just jump
>in and call CQ CONTEST...without asking QRL? first. Do you REMEMBER QRL?
>

I have numerous SSTV stories I'd be willing to share where the SSTV'ers
caused INTENTIONAL QRM on my operating freq because I had the nerve to
call CQ CONTEST on a TRULY empty freq, even after "QRL?"

Author's opinion: SSTV'ers are some of the POOREST, RUDEST operators
I've run across.

>The SSTVers only ask of this little chunk of 20m but we COULD take more.
>What would happen if we moved right up next to your favorite DX (fish in a
>barrel) net? SSTVers have been in the same place forever. WHY do contesters
>still insist on CQing there? Isn't there a law about lessening the
>enjoyment of other hams and/or interference?
>

When I call QRL and get no respone, I assume the freq is clear. If I'm on
14.230 working a contest, and 15 minutes later I'm told to QSY because
the South Potomac SSTV net is coming up, I say "sorry, OM, but I've been
here for 15 minutes."

Frequencies are first-come, first-served. Nobody has Divine Precendent to
any frequency, Emergency Traffic notwithstanding.

>I am sure there are a half million hams, or more, in America, who have no
>interest in contesting but are forced off thier favorite nets, rag chews,
>skeds and in the case of SSTVers, the only 20m spectrum they occupy, all
>for the sake of "CQ CONTEST".
>

>Maybe chunks of the bands could be set aside for CONTESTING and
>NO-CONTESTING. Any contact made outside the Contesting area would not count
>and any contester heard outside that portion of the band could be turned
>into the contest judges/sponsored and dis-qualified.

The WARC bands have been contest-free since their existence.

In an upcoming major contest, 28.300- 28.350 will not be used for
contesting purposes.

Several of the smaller contests (QSO Parties, Sprints, etc.) have a
limited window.

Contesters recognize that not everybody is interested in what they do,
and are taking steps to reduce the on-air altercations that take place.
The contester doesn't want that to happen any more than the
non-contester, if for no other reason than it slows him down, reducing
the number of points in his final score. I only wish the non-contesting
community would reciprocate.

>
>In closing, turn your 5000 watt amps DOWN, turn your raspy power-mikes and
>speech processors DOWN and turn your RF saturated brains ON!
>

I appreciate your frustration, but I would suggest that a more logical,
critical-thinking approach would do wonders for your credibility than
emotional ranting and exaggeration.

I hope I win, too!

73 to all,

Sean

: ZW> Zack W9SZ

: Right on Zack. And CW identification is used on many many commercial
: and public service radios too. It is often masked out so that it is not
: heard on the newer 900 MHz systems I think. How often do you hear a
: cop's HT or an airport employee's HT dit ditting away with a CW ID.
: Happens all the time.
: ---
: • SLMR 2.1a • Cloak captioned for the Romulan impaired.

I suppose that if you were to ask that cop or airport employee, they might know that it is Morse code, but I doubt that any of them would know reasons for the the transmissions let alone having the knowledge to copy that Morse code transmission. Although digital mapping of the callsign is more common, there are some "high tech" radiocommunication systems that use Morse code as an identifier, and will continue to do so in the future. However, note that none of the system operators, licensees, technicians or users of the above mentioned services were required to demonstrate knowledge of the Morse code prior to the licensing, installation and use of these systems. Therefore, the amateur community should be petioning their respective licensing administrations that all users of the radio frequency spectrum should be treated equitably - either require all users of the Morse code to demonstrate knowledge of the Morse code, or none of them.

My first packet radio was an old Wilson HT (6 channel xtal) bought
specifically for the purpose at a flea market. Worked fine until an
uncontrolled gravitational mishap. I also press the HTX-202 into
packet service frequently, both with a regular TNC and a "Baycom" type
device.

Do the sysadmin a favor and don't send anything to this address.

I emailed postmaster at the site and got back a message (most likely
an auto reply). The offending account has been canceled, and the
sysadmin is doing what he can to cancel the messages. He also noted that
he got 1400 (!) messages about the problem.

So, it looks like it is under control.

Once again, your comment indicates a lack of knowledge about conditions here in Southern Cal. In actual fact, most hams are quite happy with TASMA's stewardship of 2 meters. Something like this for 440 is what is needed. Sure, there are disputes, but they are resolved in a public forum, and the resolutions are NOT considered unfair, generally, by most hams. (no doubt the losers to the disputes aren't happy, but hey...)

How about a high-XL, low-R inpedance? The high-XL will make the impedor
look infinite to RF and the low-R will safely dissipate the static charge.

: "slop buckets" who are doing the chasing; same deal, different players.
: 73,
: Paul, K4MSG

Unfortunately for SSTV their innocuous corner is right in the middle of the phone band. Even most moderate size contests, taking up 60 or 70 kHz, will have the SSTV right in the middle. Also that frequently means that split frequency DXpeditions trying to include the General class band in their RX frequency will QRM SSTV. QRM wise they couldn't be in a much worse place with regard to the unthinking or unknowing ham (not even mentioning the ones who don't care).

As an active contester I try to steer clear of the 20m SSTV frequencies. However in the past I have CQed there, on what seemed to be a clear frequency (yes I did ask if it was in use). The SSTVers sort of 'educated me' (putting it politely) that I didn't want to be on that frequency. The SSTVers do seem to have learned frequency grabbing pretty well though. When a split frequency pileup infringes on their (sic) frequencies they often simply transmit video on top of the DX stations transmit frequency.

For the SSTVer who didn't understand why contesting is fun I won't try to explain. It probably woundn't make any more sense to him than enjoying SSTV makes to me.

I don't know how TASMA works, as the people I know in California are all involved with SCRRBA. Personally, 2 meters could fall into the sea and I wouldn't even notice... :)

I am familiar with UHF.

>Sure, there are disputes, but they are resolved in a public forum, and the
>resolutions are NOT considered unfair, generally, by most hams. (no doubt
>the losers to the disputes aren't happy, but hey...)

That's fine. It's the way disputes are supposed to be resolved. We agree on this point.

Any frequency coordination group that attempts to coordinate UHF in southern California (or anywhere else, for that matter...) will have to contend with the fact that the closed systems DO exist, and they will have to be considered by the coordination group. Like it or not, those systems do have a right to exist, just like the open ones. If the coordinator attempts to remove a closed system's coordination arbitrarily, that coordination group will have its butt sued off.

How does TASMA handle open versus closed repeater applications?

Wayne, you should consider that a low power station with a less than
optimal antenna is usually not a good thing to use on a simplex LAN.
That's because CSMA won't work unless every station can hear every
other station, and use of HTs adds to the hidden terminal problem.
In special cases, such as Packetcluster, it's usually OK because
the cluster does most of the talking. In a regular LAN, however,
hidden terminals reduce *everyone else's* throughput. Your station
may appear to work fine, but you're causing needless retransmissions
for others. On a LAN using a duplex repeater, this problem doesn't
arise, and a HT is as good as anything else as long as it can solidly
hit the repeater.

3646. IC-02A Display Replacement ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-25 00:00:00 UTC
From: spikes@sc.hp.com
Message-ID: <3q27uu$s8t@hpscit.sc.hp.com>
Source record: 245793

A friend asked if I could replace the cracked, broken LCD display in his IC-02A handy-scratchy. Anyone done this? Before I commit to spending a lot of time on something best left to the factory, are there any catches like trying to align the glass with some rubber biscuit conductor that is gonna be REAL frustrating? Any hints on tear down, little things that fall out? Does the display come as part of a module where the whole module is replaced, not just the LCD screen? Any idea on parts $$$'s? And finally, what is the service/parts # for ICOM up there in Washington?

Oh yeah, can someone shoot me a list of any and all mods for the toy that may as well be done while I'm fooling around in there?

Guess that be enough dumb questions for one day.....

Thanks,

Bill

ISLAND May 25, 1995
i s l a n d s

DX by John Reisenauer, NL7TB
RT 2 Box 2161, Benton City, WA 99320 USA

official packet bulletin of the United States Islands
Awards Program (US I) and US Islands ARC "KC7KHU"
**********************************************************************

Thank you for taking time to read this, and welcome to a new island
collecting program. US I is the first island program established
exclusively for collecting fresh-water and saltwater islands of
the fifty states. The program, complete with award certificates
and plaques is open to anyone interested in state island collecting.

This was another good month for US I (excluding the BBS suffering
lightning damage)- 20+ new islands were added to the directory! Kim,
KD1VE, had a pretty rough "1st Isl DXpedition". She reports..."we
set up on S. Hero Island on Saturday but the band was extremely dead-
we only made 16 QSOs in 4 hours...Sunday we moved to N. Hero and a high
SWR plagued us... then one of the kids got a huge splinter in her knee
that required a trip to the doctor". Sorry to hear that Kim. We cer-

tainly appreciate your efforts and credit you with the 1st two Vermont
islands- South Hero, VT-01L and North Hero, VT-02L! Please activate
them again.

US I SC (State Coordinator) John, KG7RS, also had a rough time with
the
weather and propagation on Box Island (AZ) last Saturday. He also re-
ported that Rabbit Island is once again an island! John will revisit
the Roosevelt Lake islands again soon. John, KG7RS, is credited with
act-
ivating Box Island and SC John, N0ISL, takes the honor for Island of
Peace!
Both were their home state islands first to be put on! News from our
3rd SC
Sigma, WB4SRH..."I'm in the process of setting up a packet station and
plan
to do Roanoke Island (June 5th), just south of my QTH". I was asked to
list the NC islands that are activated to date. Here they are:
```

Ocracoke
(NC-01S), Harkers (NC-02S), Smith (NC-03S), Topsail (NC-04S), Hatteras
(NC-05S), Oak (NC-06S), Emerald (NC-07S), Baldhead (NC-08S) and
Portsmouth
(NC-09S).

Sherri, N4XLF, mentioned the Vero Beach ARC will operate Field Day
from
Wabasso Island, FL. When qualified, Wabasso becomes the first fresh
water
FL island (FL-38R). That's great! For those of you who haven't exper-
ienced a Field Day, you need to try it- they're a blast. Don, N8YDH,
has
registered Kelley's Island (OH-01L)- our first Ohio island! Tnx Don,
let's
hear some signals from there QSL?

If you're thinking about a new rig, be careful about a certain brand
name.
Check the packet bulletins "BEWARE OF ATLAS RADIO" of late. Good luck.

The "US Island Directory", our information package including island
qual-
ification criteria, activated islands list and awards description is
avail-
able for $5.00 US/Canada or $7.00 elsewhere. This is a must for state
island collecting and activating. Stay tuned to future ISLDX messages
for new islands activated to update your directory. Thanks to the
above
for their support.

U S 73, Enjoy island collecting!

Hi, I heard that ATV can be viwed on tv that is cable ready.
If it can be, what channell? Do I use a standard UHF tv antenna?
And, it all of this can be done, do I use coax or "tv antenna" wire to get
the signal to my set?

Thanks to all who reply!

17 th Anniversary of Amateur Packet Radio
May 31,1995

By: Burt Lang VE2BMQ

At around 9pm on May 31, 1978 the first transmissions of packet over Amateur Radio were sent. The place was the upstairs banquet hall of Bill Wong's Restaurent on Decarie Blvd. in Montreal, Quebec, Canada. The event was a special meeting of the Montreal Amateur Radio Club (MARC) called to discuss and debate proposed changes to the Canadian amateur frequency allocations that were being contemplated by the Dept. of Communications. In attendance were several DOC officials from Ottawa, including the Director General - Regulations, Dr. John deMercado. Dr. deMercado is considered by some to be the "father" of amateur packet radio due to his persistant pressure to open up an exclusive portion of amateur band to experiment with the new mode and due to his early experience on the Aloha project in Hawaii. Others take a less charitable view of his role in the matter.

The first packet message was reported to have been "From John deMercado to the Montreal group - Bravo, well done!" or something like that. As is common with many historical events, the participants did not bother to record the particulars and memory now is less than perfect.

The Montreal Packet Net group consisted of:

Bob Rouleau VE2PY
Norm Pearl, VE2BQS
Fred Basserman, VE2BQF
Bram Frank, VE2BFH
Jacques Orsali, VE2EPH
Ted Baleshta VE3CAF
Ian Hodgson, VE2BEN
and others not mentioned.

A detailed description of the Montreal Protocol and hardware used in the experiments is given in the TAB book #1345 "PACKET RADIO" by Bob Rouleau and Ian Hodgson published in 1981. An interesting note is that the Montreal Modem design used the Exar XR-2206/2211 chip set. I am told that a sample of the Montreal

Modem was sent to the Vancouver group (VADCG) in the fall of 1978 and it is probably no coincidence that the same chip set appeared in the TAPR TNC modem of which Doug Lockhart of VADCG had a hand in designing.

It is ironic that none of the original Montreal Packet Net group are presently in Amateur Packet Radio. After an initial spurt of activity in amateur packet, Bob Rouleau and several others in the group turned to commercial applications for packet. The resulting company, DataRadio Inc, today is building and marketing commercial packet radio systems around the world. A recent application is the Canadian Weather Radio packet service introduced several years ago using DataRadio 9600 bps equipment.

We should congratulate these early pioneers in amateur packet radio for the work they did in getting the hobby started. It is through their early efforts that today's worldwide packet system has grown, often chaotic, seldom planned but with a continuous forward progress due to the efforts of countless others in the intervening years to advance and refine the technology. In the words of the first packet message:
BRAVO, WELL DONE!!!!!!!!

****

This article is exerpted from the "MTL/WQC Packet Network User's Resource Manual" published by Burt, VE2BMQ.

One of the reasons I support HAMs is the emergency work they do. I would much rather have a serious contester acting as net control, pulling calls / info out of the mud, than most net control ops, or any 75 m rag chews. Let the contestors practice what they like, the experience may be invaluable some day.

I don't know about the integrity bit though, it seems odd that a person has to repeat themselves a time or two when they just reported a 59 signal report (;

So who appointed you? What is your belated objection to the post?
My point was the dueling egos had more potential to hurt amateur
radio than help it.

As to the comment on 75 meters the ranting by K5BLB (Big Loud Bully?)
is in itself bad enough but that jerk doesn't have the nerve to put
his real address in the call book. He and his bunch make CB look like
a gentlemen's arena.

These are my opinions like all the other posts here are some body's
opinion.

Reading some of your other posts I have a question. Are you one
of the guys on 3953? The rhetoric is familiar.

3655. Slackware 2.2 bugs. (Linux)

Island News Bulletin No.13

Villanova d'Asti - Italy - May 25, 1995
Editors Piero Pirrone, IK1TZO, Franco Pirrone IW1DGL

In this issue:
- New Info

Thanks to AA7RW and W5BOS for their letters, DL8OBC for Internet message, GI0SSA and Internet.

----------<< New information >>----------

NA-065 29 july - 30 july - Prefix: W7

Debby has written us about his DXpedition to Juemes Island, into WASHINGTON STATE NORTH group, NA-065 for the IOTA Contest.
Debby request to all to be patient, because it is his first DXpedition.
QSL card to his home call.

NA-087 12 july - 15 july - Prefix: KL0

Lanny has written us about his DXpedition at Popof Island (NA-087), that is part of SHUMAGIN ISLAND GROUP. Operation will be from 2200z of July 12 to 2300z of July 15, in CW and SSB.
QSL via W5BOS (Lanny Phillips, 505 Bellah Drive, Irving, TX 75062 USA).
This island is valid also for the IOTA Artic Islands.

EU-127 29 july - 30 july - Prefix: DL

Felix has sent an Internet e-mail message with this info:
during the IOTA Contest, he will operating from Helgoland Island, (EU-127).
The activity will start a few days before the contest and will end some time early August. Call sign will be DL8OBC/P, he will be active on CW and SSB.
Every station worked will receive a very nice full color QSL card that shows the red cliff of Helgoland.
QSL card via bureau or direct to DL8OBC: Felix J. Riess, P.O. Box 1253, D-30984 Gehrden, Germany.

----------<< Internet Rumours >>----------

A message sent by Jukka OH6LI:
EU-053 OJ0/OH8AA Market Reef,
A group of Hams (OH0RJ, 6EI, 6LI, 6LK, 8PF) will activate OJ0/OH8AA during May 25th-29th. Bands: 160m-6m in CW and SSB. They will operate on WPX CW multi/single category. They will use a modest power level, so if you hear them, call!. They will be listening.

QSL via buro, OH6LI or:
Jukka Klemola, Aarontie 5, 31400 Somero, Finland.

A message sent by Bob N6EK:
OC-121, Mamanuca group, and OC-156 Yasawa Group,
Steve AA6LF and Bob N6EK, will be operating from Fiji, using the calls
3D2LF and 3D2EK, starting on May 29 for two weeks.
QSL 3D2LF to AA6BB, and 3D2EK to N6EK.
They will operate on CW and SSB, on 16260, 21260 and 7058 KHz.

A message sent by Tim, KJ4VH:
AS-110 DONGSHA ARCHIPELAGO (Pratas Island)
From May 25th to June 5th, operators from USA, Japan and Europe, will be
active from Pratas Island.
QSL via: KU9C, Steven Wheatley, 12 Netherton Terrace, Morristown NJ 07960 USA
Frequencies:
CW: 1827,3504,7004,10104,14024,18074,21024,24894,28024
SSB: 1827,3795,7045 EU,7065 NA,14195,18125,21295,24945,28495
50 MHz and OSCAR operations are planned.

------------------------------<< News >>----------------------------------
Keith GI0SSA, write us about his intention to activate Mew Island (EU-122).
Next Sunday Keith will go at Mew Island, to see a location for HF antenna,
The possible date for the DX activity may be from May 24th to June 5th, but
this is not yet confirmed. Mew Island has a piece of land into WAB square
J68, the only piece of land in this square.
More information on next issue.

PP> The TS-520 is new to me and I didn't realize that the CARier control
PP> affected the output. My son turned that down to zero and I Got Zero
PP> output.

PP> Sorry to have wasted the bandwidth

The TS-520 is an early version of Kenwood xcvrs which
uses 6146 tubes for the final. It is similar to the
TS-830 which I have. The fact that when you tested
your rig at CW and got the 50ma. was an indication
your finals were OK; my guess is the 50ma. is the idling
current which those tubes should be set at. (BTW your rig
probably has a pot on the rear apron which is used to
set this idling current--it is supposed to be 50ma.).

Since you got no output, it meant no drive to the 6146's.
This could be due to lots of reasons, but since you
knew the dials probably had been fiddled with, your most
likely clue was that the drive setting or the carrier setting
had been changed.

Good that you found the problem. I know how it feels
when the rig suddenly appears to have gone west for
no obvious reason.

Here's another for you: I don't know if this happens
to other manufacturer's rigs, but the Kenwoods will
develop weird effects when some of the push button
switches are not disturbed for months at a time. A bit
of corrosion on their contacts will occur and one day
you find the rig inexplicably acting up. I have found
that I have to exercise these switches from time to time
to avoid this.

Jim can you get me a email address to someone who is on SCRBBA? So far
attempts to contact them at the P.O. Boxes listed for the organization
have revealed nothing.

>How does TASMA handle open versus closed repeater applications?

Basically from what I've heard, once a repeater is considered "open" it's
status remains open on that frequency pair until the end of time. Privite/
Closed systems are almost as rare as open repeaters on 70cm. I am aware of
only one repeater that has been successful in changing the status from open
to closed/private and that is the Claremount Amatuer Radio Association (CLARA).

Right now, TASMA has a waiting list for people who wish to put up repeaters.
The chances of getting a open pair are much better than getting a closed pair.
Because of this and the fact that hams recognize the 2m band is conjested
most people don't bother applying to put up a repeater on 2m. They look

to 70cm and 1.2 Gig.

Mike -

I do just the opposite: I keep my Icom 229 mobile in my vehicle and then use my HTX-202 for packet and home use. The cable for TNC to HTX-202 is simple-- The audio out from the radio goes to the audio in on the TNC. The HTX-202 is keyed by grounding the microphone positive lead through a resistor, so you have to wire a PTT resistor somewhere between the microphone connection and the TNC. Every TNC manual I have ever seen has a wiring diagram explaining how to do this (this type of keying is common to several types of HT) in great detail. It's a piece of cake. In fact, I really only have two tips regarding using the HTX-202... 1) Use the TNC in "software carrier detect" mode. This seems to work best with the 202. 2) Listen to your packet signal. If your audio level seems the same as everybody else's, great. If it sounds distorted, or weak, be aware that some TNCs have a jumper for setting the sensitivity of the audio in. This may have to be changed.

Now, as far as a packet terminal, let me just say that you DON'T really have to use a computer. Computers are nice and offer a lot of flexibility, but a dumb terminal works fine. I had somebody give me a dumb terminal for free. If you already have a computer (I assume you do), then all you really need for packet is a TNC. I have seen good used ones as cheap as $50.

Good luck and 73!

>You don't hear individual letters at that speed.

Horse hockey. I can read Latin text written in the Roman alphabet
at +750 words a minute, but I don't understand a syllable of it. I
could read it out loud, and probably a person fluent in Latin would
understand it (modulo my mispronunciation :) - but not me. Can your
high speed op friends understand 60 WPM Latin? Sure, they could get
all the words, and write them down with no errors, but could they
carry on a conversation? (I mean a real conversation on an arbitrary
topic, not UR SIG 5NN TNX FER QSO OM K - that's just pidgin English).

A language is grammar & vocabulary. Morse is an *alphabet* (actually
a family of alphabets) just as the Greek, Roman and Cyrillic alphabets
are alphabets. Alphabet != language. We'll keep saying this as long
as it takes to get the point across, which obviously hasn't happened
yet.

>

Scott,

my experience has shown that if there is a major event everyone and his dog with a cellular immediately makes a call. The press will call their newsrooms and leave the line open for as long as their battery will last or run it from the mobile.

A few years ago I was in charge of communications for the National Capital Air Show. We had several VHF and UHF/UHF trunked nets running. All of the different team leaders also had a cell phone.

Unfortunately we had a P51 crash, the air show president had turned his radio off and when I tried the cell phone I couldn't get through. I had discussed this with the Ma Bell rep a couple of years before and he assured me that there would be plenty of lines available. We were located within range of 2 cell sites.

The head of the local Emergency Measures group was in Vancvouver last year for a major exercise that ran a couple of days. Trying to use a cell phone at lunch time was impossible. I have been told the same thing about the commercial trunked 800mhz system in the area here as well. It overloads around lunch as well.

So yes cell phones systems can get overloaded and more emergency organizations are slowly starting to realize that you still need a radio system when there is a major event happening.

In the audio business, Kenwood and Pioneer were at one time notorious
for this problem with their push switches. The problem was so severe
for awhile that Pioneer made available switch "inserts" (the internal plastic
slider with contacts and springs).

My integrated amplifier is an older model Kenwood which I keep because
of its dual power supplies and all-metal construction. However, it also has
this problem, and spraying the switches with even the best cleaners and
lubricants only resolves the problem for a few months at a time. <sigh>

Hello all and thanks for reading this message!! The Metropolitan Amateur Radiuo Service (MARS) holds their weekly SwapNet every Monday evening on thew MARS repeater, located on Loop Canyon. This repeater covers the San Fernando Valley, Los Angeles city, parts of Long Beach, parts of Orange County, parts of San Bernadino County, the Santa Clarita area, and parts of the Antelope Valley. All licensed amateurs wishing to buy or sell amateur radio gear or computer gear are welcome to check in to the net. The net is held every Monday evening at 8:00PM PDT on the MARS repeater, 446.650 MHZ 67Hz pl. Hope to see you there!

DX Bulletin 28 ARLD028
From ARRL Headquarters
Newington CT May 25, 1995
To all radio amateurs

SB DX ARL ARLD028
ARLD028 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Jose, CT1ENQ, Joe, NJ1Q, Martti, OH2BH, Leo, JI1DLZ, Jim, JR2BNF, Randy, K0EU, and Contest Corral from QST. Thanks to all.

PRATAS ISLAND. A large group of ops will commence operations on May 25. On CW try 1827, 3504, 7004, 10134, 14024, 18074, 21024, 24894 and 28024 kHz. Listen for their SSB on 1827, 3555, 7045, 7065, 14195, 18125, 21295, 24945 and 28495 kHz. RTTY should be on 7082, 14082 and 21082 kHz. Some 6 meter and satellite operating is possible. Pratas Island is IOTA AS-110. QSL via KU9C.

VIETNAM, 3W. Warren, KF7AY, and other members of the Central Arizona DX Association hope to get on the air from Vietnam around October 12 or 13.

CAMBODIA, XU. Hungarian Embassy worker Sanyi, XU95HA, will leave Cambodia on June 10 or 12. Sanyi will be active everyday until departure and plans to be in the CQ WW WPX CW Contest.

ERITREA, E31. Jin, JF1IST, will be in Eritrea May 27 to June 11 on UN related activity. He plans to operate all HF bands, 50 MHz and OSCAR 10 and 13, though this is not a classic DXpedition.

MALI, TZ. TZ5RS has been active and heard on May 20 around 14011 kHz between 0100 and 0200z. QSL via AA8AD.

SRI LANKA, 4S. 4S7/JA4FM is active on the low bands. Check 7045 kHz between 1600 and 1700z, then 3795 to 3799 kHz or 1909 kHz simplex calling CQ.

FIJI, 3D2. Steve, AA6LF, and Bob, N6EK, will sign 3D2LF and 3D2EK respectively, for two weeks starting May 29. They hope to activate

the Mamanuca Group, OC-121, and the Yasawa Group, OC-156, for IOTA chasers. Listen for their CW 5 kHz up from the band edge. For SSB try 7058, 14260 and 21260 kHz. QSL 3D2LF via AA6BB. QSL 3D2EK via N6EK.

MALAWI, 7Q. A European Satellite DX Fund sponsored DXpedition will run May 26 to June 4 by Arie, PA3DUU, with activity on OSCAR 10 and 13. The only HF will be on RTTY. QSL via PA3DUU. Please include sufficient postage.

ZAIRE, 9Q. Alex, PA3DZN, aka 9X5EE, is now active as 9Q2L. Check 14025 kHz from 2100 to 2330z.

CAPE VERDE, D4. Geoff, GJ4ICD, will start his 6 meter effort around June 1 from the QTH of D44BC. Listen for D44BC on 6 meters as well as 28885 kHz.

VATICAN, HV. Paolo, I2UIY, hopes to be in the CQ WW WPX CW Contest signing HV4NAC. QSL via IK0FVC.

SVALBARD, JW. JW2FL will be on the air from Bear Island, IOTA EU-027, starting around the end of May, mostly on 20 meters.

JUAN FERNANDEZ ISLAND, CE0. Bob, K4UEE, and Randy, K0EU, are planning a DXpedition slated for a week in September 1995.

MONACO, 3A. Luc, I1YRL, will be on all bands and modes June 10 and 11, 24 and 25, and sometime in September. He will sign 3A/I1YRL. QSL via CBA.

CYPRUS, 5B. G4WFZ plans to be active around May 26.

ALASKA, KL0. Lanny, W5BOS, will operate from the Popof Islands, IOTA NA-087, in the Shumagin Island Group, from 2200z July 12 to 2300z July 15. Listen for his SSB and CW and the call sign W5BOS/KL0. QSL via W5BOS.

PUERTO RICO, WP3. Paul, WX9E, Mike, N0BSH, and Felipe, NP4Z, will team up to put newly allocated Puerto Rico prefixes on the air during the CQ WW WPX CW Contest. Listen for WP3/WX9E during the contest. QSL both NP3/N0BSH and WP3/WX9E via WX9E.

CUBA, CO0. A group including CO2QQ, CO6CG, CO7KR, CT1EEB, CT1ESO, EA5BYP, EA5YN, I8IYW and I0SNY will activate Sabana Archipelago May 25 to 29. Listen for CO0OTA. This will be a new one for IOTA. They will be on all bands and modes, including satellite operations. VHF activity will be on 50, 144 and 432 MHz for the benefit of grid square hunters. QSL via CT1ESO, Luis Gomes, PO Box 207, 8900 Vila Real de Santo Antonio, Portugal.

QSL NOTES. CT1CJJ is handling cards for the 4L5O operation of 1995. QSL 4L5O via Omari Odoshashvili, PO Box 101, 61000-Trabzon, Turkey.

THIS WEEKEND ON THE RADIO. The big one for this weekend is the CQ WW WPX Contest on CW, from 0000z May 27 to 2400z May 28. Work as many different prefixes as possible. Exchange signal report and progressive three digit serial number, starting with 001. Details appear in February QST on page 105.

World Telecommunications Day on CW runs from 0000z to 2400z May 27. Exchange signal report and serial number starting with 001. For more information check page 136 in May QST.

The Venezuelan Independence Day Contest on SSB starts at 0000z July 1 to 2400z July 2. Exchange signal report and serial number starting with 001. Work all stations, not just YV, YW, YX, YY or 4M.

The QRP ARCI Hoot Owl Sprint is from 2000z to 2400z local time May 28. Exchange signal report, state/province/DXCC country and either QRP ARCI number or power output.

From: Perens@Hams.com
Message-ID: <3q30u8$sah@hustle.rahul.net>
Source record: 245819

Pete,

I was saddened and angered to read the quote at the end of this message
in your June newsletter.

Like you, I'm a CD-ROM author and the publisher of Usenet advertising.
Unlike you, I restrict my full-size ads to rec.radio.swap, and use only
small notices in my .signature file (like the one at the end of this
message) to advertise in other groups. For those who wish to see my
full-size ads, I publish a WWW page and respond to e-mail queries from
those who don't have WWW.

What offended so many people is that you chose to make a massive
cross-posting with your ad. Please, next time, do what I do, and what
other well-behaved net advertisers do, and post your ad to
rec.radio.swap only.

I'm convinced that you've generated tremendous ill will toward Amsoft.
The network administrators will probably cancel your message the next
time around, and then nobody's going to end up seeing it anyway.
If you continue to make massive cross-postings, these newsgroups will
probably eventually go to moderation, and the new moderators will either
not allow advertising or will charge for it.

I think you mean well, and you simply don't understand what you've been
doing. I'd be happy to discuss posting guidelines with you at any
time. You can reach me at 510-215-3502.

Thanks

Bruce Perens AB6YM

3679. New Atlas Radio Corp: Rip-off?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-25 00:00:00 UTC
From: leigh@rain.org
Message-ID: <3q0rjn$e6s@news.rain.org>
Source record: 245826

The new company that has been using the old Atlas name and promising a new American-made inexpensive HF radio _may_ be a scam. On Internet and Packet I've seen several complaints about orders placed to the new Atlas company, and below is the most recent. It sounds doubtful that Atlas will ever ship their new rigs...

FWIW, the best $50 I ever spend was to buy an old Atlas 210x. It's primitive, but I've made a number of enjoyable CW contacts on 15 & 40 meters. CW without a sidetone & having to shift a TX/RX switch was not as difficult as I thought.

73. --Leigh/KM6JE.

5400 B# 4152 RIP NL7TB ALLUS 950524 BEWARE OF ATLAS RADIO!!!

BEWARE of Atlas Radio! Their ad still appears in CQ Magazine- June issue.

In September 1994 I ordered the new Atlas 400X transceiver and PS. I paid the $200 deposit they asked. A week or so later I was informed they'd ship my order #355 in January. No problem, I wanted an Atlas rig again so I'd wait. Well, mid January goes by and I'm on the phone with Herb Johnson, W6QKI, asking where my rig is. They've had some technical problems etc. etc. and my rig will ship early February. OK- I want it bad enough- I'll wait longer. Mid February I get another letter from Atlas requesting the $720 balance for shipment in March. I paid the $720 balance. I now have $920 cash invested in this order and several LD phone calls!

It's mid March and no radio- so I call Atlas again and talk with Mike, N6ZSR. This time I tell them either the rig gets shipped now or send a refund. I get another...we've had problems...speech- but they'll ship soon. OK- talk me in to it again, I'll wait. April 10 I get another letter with a re-revised shipping date of "week of May 1st". I think you see where this is headed. On May 15th I left a message ask- them where my rig was (they're not answering the phone now).

On May 18th I sent Atlas a FAX because they no longer answer their phones nor will their recording take messages. I really feel the $920 is gone now! In the FAX I explain my dilemma and demand a refund. Meanwhile I check with the BBB of Calif.

and was informed there were other complaints about Atlas Radio.

As of May 22nd Atlas Radio has not responded to my May 15th
phone call or FAX. I sent QST and CQ Magazines a copy of my FAX
to Atlas Radio so others would not experience what I have.
This way of doing business not only stinks for the lack of pro-
fessionalism "from HAMS to HAMS" but the deception (fraud?) as well.
Who else besides me has had this terrible experience with Atlas
Radio? Don't buy from Atlas Radio because all they do is collect
money. I'll let you know if I ever get my money back.

Well SCRBBA has nothing to do with the 2m band plan. SCRBBA coordinates
the 440 spectrum. A new owner can offer something that is desperately
needed in the 440 spectrum. A open repeater for the ham community.
Such items are rare on 440.

Is this item new? I was aware that Icom made a tri-band 2m/440/1.2Gig
ht. I haven't heard of the 2m/220/440 ht.

From what I understand, 220 is a rare item because most companies don't see
the demand for such an item. Since hams lost the lower portion of the 220
spectrum, they are a little hesitant creating such equipment. In addition
220 can only be used in the US.

3685. Re: FM in June VHF QSO Party

NOW ON SHORTWAVE AS OF JUNE 5, 1995!!!!!!
WWCR, 100,000 WATTS, ON TAPE DELAYED BASIS TWICE PER WEEK.
Saturdays at 5:00pm ET on 12.160
Sunday nite (early monday am), 3:00am ET on 7.435

Ham Radio & More is on the Talk America Network. It is aired live every Sunday at 6:00pm EST, originating from Phoenix, Arizona. It can be heard via TVRO satellite on Spacenet 3, Transponder 9, 6.8 audio. Our toll free listener call-in line is 1-800-298-TALK. The originating station number is 1-602-241-1510 for more information.

Any radio station can air the show FREE OF CHARGE. Get your local station to air the show by calling the program director asking them to air the show. Faxes help, too. Again, there is NO CHARGE for the station to air the show, so a lot of calls asking for the show can really work.

Also, be sure to check out our WWW Home Page. It has information on upcoming shows, reviews of past shows, and even theme music. It is updated courtesy of the Boston Amateur Radio Club.
Access it at:

Well, here in CA the FCC office has a total of six (yes that is not a type-o) field operatives for the entire state of CA. That number may have changed recently, but that is what I was told 2 years ago. Its no wonder why they don't give a hoot about hams.

As far as the individuals who are listed in the previous message. They (for the most part) stay on only one frequency and jam on only one frequency. Most hams in the SOCAL (and some hams nationally) are aware of this infamous repeater. Sadly to say, it seems that the "community standard" on that repeater is to jam, hurl obscenities, and occasionally engage in polite conversation.

Howdy.

Our club just inherited a bunch of GE "Hi Power" MVP-series Handi Talkies that were declared surplus by the University. Of course, we want to convert these to 2m. Any pointers on how to accomplish this would be greatly appreciated.

They are set up for 2 channels in the 155 MHz range although it looks like there is room for a total of 4 pairs. It looks like the channel elements could be messed with. It also has Channel Guard (tm) (CTCSS). And 1.2 Ah batteries :-)

>I have had nothing but problems with it.It was great for about a year

<...>

>to anyone else or am I an enigma?

An anomaly. I bought mine used in 1992 and quickly found out about buying stuff at hanmfests. It wouldn't stay on the channel you put it on unless you used the call channel. It acted like the channel know was being turned. It was new enough that RS honored the warranty. After about 6 weeks of them saying "it'll be back next week", I got them to just give me a new one.

Absolutely no problems since. I think it's a great radio and have recommended it to many folks.

Your mileage may (and apparently did) vary.

> the signal to my set?

Unless the ATV hams in your area are still using the 432MHz frequency for
either direct or repeater transmissions, you wont get them. Most ATV is
now in the 1250Mhz band. If they are in your area try setting your set to
CATV channel 56 or 57. The actual channel is offset whe compaired to the
cable standard so you still may not get it to lock in properly.

While a UHF antenna is OK, if it's a yagi try extending the refelector and
driver elements with some tubing to allow for the lower frequency. Twin
Lead is always recomended for pulling in weak UHF stations.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 25 MAY AND FORECAST FOR 26 MAY - 28 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 67/0

GOES satellite data for 24 May
Daily Proton Fluence >1 MeV: 4.9E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 3.1E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
26 May 27 May 28 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 26 May: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 24 May
Learmonth 16 3332 4432
Fredericksburg 10 20
Planetary 12 30

Observed Kp for 24 May: 4665 3322
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
26 May 10 Quiet to unsettled
27 May 10 Quiet to unsettled
28 May 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

25 May normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 May normal normal fair-normal
27 May normal normal normal
28 May normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
25 May 10 near predicted monthly values, with spread F observed
during local night.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
26 May 15 Near predicted monthly values
27 May 15 Near predicted monthly values
28 May 15 Near predicted monthly values

COMMENT: Obs Townsville MUFs: near predicted monthly values.
Obs Hobart MUFs: 20% depressed in the first half UT day and
no data available thereafter.

Some (partial) infromation on this: the HAM RADIO event is in the city of Friedrichshafen (this is located on the Lake of Constance = "Bodensee" in German). The date is from 23rd thru 25th of June 1995. There is a flea market, well the HAM RADIO so to say is the flea market, with additional events and with exposition/fair of ham radio gear manufacturers.

>or another because it's alleged to be "obsolete" is simply inappropriate.

None of the stated purposes for the amateur radio service include
acting as a living history museum for obsolescent radio techniques.
In fact, one of the questions on the radio exams has as an *incorrect*
answer, IE distractor, that a purpose of amateur radio is to preserve
antiquated radio techniques. To the contrary, one of the stated purposes
of the amateur radio service is to *advance* the radio art. The radio
amateur is challenged to find new ways and new techniques, to be progressive,
not retrogressive and blindly clinging to old ways just because that's the
way it's always been done.

If it's eighty-plus years old (and it's very much plus), then if it
hasn't been advanced as much as possible by now, when will it be
advanced? IE Morse is *mature*, and its use no longer advances the
radio arts.

Unless it's been changed within the last few years, there's a federal law making it a crime for merchants to levy a surcharge on credit card charges. A discount for other forms of payment *could* be interpreted as breaking this law, which is why more merchants don't do it. No such cases have gone to court as far as I know, but even so, I would imagine that any merchant who offers cash/check discounts risks revocation of his band card agreement.

You can thank the bank card lobbies and crooked politicians for all of the above.

>with my HT. If San Bruno is accessable, I may go there instead, but if several
>people were going elsewhere, I may want to join.
>--
>Robert A. Klahn KE6OQV klahn@netcom.com

Diablo - state park during day (possibly at night when the gates are locked if
you camp in the park...)

Tam - state park, accessible during day

San Bruno - county park, accessible during day

* Warning - all three are RF-dense locations, big time *

Twin Peaks - accessible by road 24 hours (majorly RF-dense both from xmitters
there are from those on Sutro Tower)

Mt. Sutro - If you can bicycle to the top, please let me know how. (My
recollection is tha there's a locked gate.)

Marin Headlands - as previously mentioned, a great QTH IMHO.

Various points in Oakland/Berkeley hills - pull off the road at elevations up
to about 1600, with 180 degree (or more) clear view. 24 hours. Very RF dense
at most (otherwise) attractive locations.

3710. Re: ? Open 440 repeaters in SoCAL ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-26 00:00:00 UTC
From: brian@nothing.ucsd.edu
Message-ID: <3q5ibc$95i@news1.ucsd.edu>
Source record: 245744

As a former member of TASMA (the Two Meter Spectrum Management Association), and a previous member of the board of directors of TASMA's predecessor, the SCRA, I have to say first-hand that these people TRY hard.

TASMA has had some rocky times - officials who really didn't have the time to spend on it that it needed, or didn't have the background, or knowledge, or interpersonal ability, or whatever. Over the years, a person or two got in trouble for making decisions without the consent of the organization as a whole, etc. etc. etc. But by and large, it keeps the newcomers who want to become repeater barons happy, and it does try pretty hard to be responsive.

SCRRBA has a different way of working - it takes a long time to answer requests, and in some sense, that's a filter. But it has a different procedure as well: in every band it coordinates for, there is a test pair. Applicants are encouraged (almost required) to construct their system and get it working on the test pair before applying for coordination. That prevents most of the alleged 'paper repeaters' from taking up a channel pair but never appearing. And it's only an extra pair of crystals (say, $50) and some duplexer retuning. But it means you have PROVED that you can build and maintain a repeater.

And SCRRBA realizes that it's working, for the most part, with busy people who have complex systems. Few of the systems on 440 or higher are simple repeaters with off-the-shelf radios and controllers. Most are complex systems, and they may take a while to get built, fixed, or upgraded. So SCRRBA seems to tolerate longer 'silent periods' than others might.

There's still lots of room on 1200, and a few places on 6m. 900 is nearly empty except for some links and Teletrac, and 2400 and up is just plain empty compared to 440, 220, and 2m. There's plenty of places to put a repeater if you really have to have one of your own. It just might not fit well with the radio you already have.

I'm not overjoyed with SCRRBA's long delays either. But when they do act, I think they act in an impartial, fair, and technically sound way.
- Brian

Propagation Forecast Bulletin 23 ARLP023
From Tad Cook, KT7H
Seattle, WA May 26, 1995
To all radio amateurs

SB PROP ARL ARLP023
ARLP023 Propagation de KT7H

Solar activity declined this past week. There were no visible sunspots in the two days prior to the writing of this bulletin. Geomagnetic disturbances, as measured by the K and A indices were also up over the past few days. Solar flux is expected to rise gradually until around June 12, and then decline. There is also another disturbance predicted for around May 30.

Sunspot Numbers for May 18 through 24 were 56, 44, 34, 20, 13, 0 and 0, with a mean of 23.9. 10.7 cm flux was 91, 86, 80.8, 75.1, 70.8, 69 and 67, with a mean of 77.1.

The path projection for the WPX contest this weekend is to Germany from the center of the USA.

80 meters looks good around 0230-0300z, and 40 meters 0100z to 0430z. Check 30 meters from 2330z to 0730z, and 20 meters from 2130z to 0000z. and again around 0500z

The Association of Radio Amateurs of the Republic of Mexico (ARARM) welcomes hams worldwide to its 35th annual convention to be held this year in Guadalajara, Mexico, 27-30 July 1995.

The convention will be held at the Hotel Malibu, one of Guadalajara's luxury resort convention centers. Rooms at the hotel will be available at approx. US$36.00. The convention will offer forums on DXing, packet radio, repeaters, satellite and emergency communications.

Families are welcome to attend and there will be a separate cultural program for interested spouses.

3720. This Week in Amateur Radio #113

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-26 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <Jw0+EM4.sanderman@delphi.com>
Source record: 245754

Here is a summary of news items covered on edition #113 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 2-Jun:

1. Study Says Electromagnetic Fields Have No Hazardous Effects
2. ARRL Announces Results of Recent Section Manager Elections
3. Tom Kneitel, K2AES, Steps Down as "Pop Comms" Editor
4. New Phone Numbers Announced for ARRL Departments and Services
5. Motorola Offers FREE Kits to Amateurs
6. "Amateur Radio Newsline" - Edition #928 from Los Angeles
7. "EZSATS" with Bruce Paige, KK5DO
8. Weekly Propagation Forecast with George Bowen, N2LQS
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. Upcoming Special Event Stations
11. Packet Radio Gone Awry - "What is All This Lunacy?"
12. "The RAIN Dial-up" from Chicago

Funding for the program's transmission and production expenses was provided by a grant from the Blue Ridge Video and Digital Society of Roanoke, Virginia, where "This Week in Amateur Radio" is heard on the WB4QOJ repeater on 145.21 MHz, serving amateurs in Virginia, Kentucky, West Virginia, and North Carolina. Acquisition costs for the "Amateur Radio Newsline" have been provided by a grant from Mark Ross, KO6DG, and Scott Press, KD6YWA. Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community.

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @

WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

This whole thread(s) about cw or not to cw is truly off mark. It has nothing to do with what cw can or can not do, but rather a group of people who have "got theirs" and feel that they are part of some exclusive fraternity, that because they have become proficient in morse code that everybody else who wants to "join" should have to as well, and between another group of people who really dont care about being one of the "elite" but want to use the airwaves to communicate, regardless of the mode. The "got theirs" crowd is using everything and anything they can to justify what is basically just sophmoric behaviour on their part. There is a international requirement at this time for code, but the 5wpm level meets that requirement. This whole thing is like a bunch of buggy whip users attempting to keep people from driving automobiles, because whippin' the horse is just so much more satisfying and takes much more "skill" to get from point a to point b.

Sad to see adults acting like children.

>C. To preserve old radio techniques, maintain a pool of people
>familiar with early tube-type equipment, and improve tube radios
...
> No mention
>is made of preserving the radio art.

I think you're confused by the ambiguity due to a misplaced hyphen.
The 2nd and 3rd statements mention `tube'. Thus, the first statement
should actually be read ``To preserve old-radio techniques''. You're
reading it as ``To preserve old radio-techniques''. To me, these
have very different meanings.

Note also how the question is stated: ``What are three...'' not
``What are *the* three...''. By asking ``What are three...'' they're
not ruling out the fact that there are more than three.

The statement ``To preserve old-radio techniques'' will make sense
to you if you grew up operating tube transmitters: neutralization,
working the load and tune controls, bringing the filament voltage
up slowly on power-up, etc.

I hope this subtle difference is clear.

>needed in the 440 spectrum. A open repeater for the ham community.
>Such items are rare on 440.

John, you missed my point. The coverage is already duplicated many times
over on *other* bands. Why dump more high level RF into the environment?
No matter where you live in SoCal you can find a repeater on *some* band
to suit your needs. I personally feel a freeze on new repeaters should
be implimented unless one can justify with good reason the need for
installing one.

Given the density of amateurs in SoCal simplex operation should now
be widely encouraged.

>Could anyone who knows let me know if this is really the case?

Mostly.
The landlines themselves are exclusively leased, so the lines themselves are not affected by any traffic congestion within the PSTN. But they do generally route through COs to the MTSO, so any problems at the CO level would be felt within the cellular system.
If microwave is used for the links between sites, the system is completely independent of the PSTN and is much more robust in an emergency situation. Unfortunately, you can't necessarily have microwave at all sites and the initial cost (and especially cost per channel, since not many T1 or 2xT1 microwave radios exist; they're usually at least T2, often T3 or DS3) is substantially higher than landlines.

3736. "Preserving the radio art" not in Part 97 (was: cw is here to stay!)

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-26 00:00:00 UTC
From: Perens@Hams.com
Message-ID: <3q3nr8$s19@hustle.rahul.net>
Source record: 245854

Jeffrey Copeland writes:
> Ah, but "preservation" is not one of the conerstones of the amateur radio
> service. In fact it is specifically stated that amateur radio is not
> intended to preserve the radio arts...

From: brian.carling@acenet.com (Brian Carling)
> It IS? Where? Not in any FCC rules or ARRL documents I have ever read!

This aroused my curiousity, so I did some research.
It turns out the closest FCC comes to stating that Amateur Radio isn't
intended to preserve the radio arts is a question in the Novice license
exam:

N1A05 (A) [97.1]
What are three reasons that the amateur service exists?
A. To recognize the value of emergency communications, advance
the radio art, and improve communication and technical skills
B. To learn about business communications, increase testing by
trained technicians, and improve amateur communications
C. To preserve old radio techniques, maintain a pool of people
familiar with early tube-type equipment, and improve tube radios
D. To improve patriotism, preserve nationalism, and promote
world peace

The correct answer is "A". Note that "preserve old radio techniques"
is one of the incorrect answers. Here's the basis for that question
in Part 97:

S 97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an
amateur radio service having a fundamental purpose as expressed in the
following principles:
(a) Recognition and enhancement of the value of the amateur service to
the public as a voluntary noncommercial communication service, particularly
with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to
contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules
which provide for advancing skills in both the communications and technical
phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service
of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to
enhance international goodwill.

That's the entire basis and purpose of the Amateur service. No mention is made of preserving the radio art.

Thus, while it isn't quite as "specificaly stated" as Jeffery might have thought, he correctly interpreted the sense of Part 97 on this issue.

Thanks to ARRL for the Part 97 and exam data.

>responsible attitude. It is what we need here.

Without (for the moment going into details) I'm suprised no one has
mentioned the reason why so many of the southern California 440
repeaters are closed.

I don't claim to have an exclusive lock on the truth but I was a
member of the board of a private 440 system in southern California for
seven years.

In addition to that I was heavily involved with a now defunct well
known two meter repeater organization as well.

I guess I should go into some of the history as I understand it.
Please understand I'm not trying to start a flame war just explain why
things have evolved to the point they are.

In the begining FM was for the technically oriented hams who loved to
experiment. As the years went by commercial rigs became available
which resulted in two meters getting populated and proceeding to have
problems. Basically it was politics and IMHO peoples egos.

The techies moved up to 440 basically determined to escape what two
meters had become. They also IMHO decided to control who had access
to their systems.

As some of you may know some of these systems are quite sophisticated. They're not just repeaters but remote bases that have taken quite a bit of effort to build. That's not exactly something you open up to anyone. Especially to some hams in southern Calfornia.

The hams who moved up to 440 were tired of the endless on the air fighting, the club politics, the bozos who took great pleasure in making two meters a bad place to be and the jamming.

I've met some of these folks who moved to 440 and I'll be the first to say that some of them have enormous egos and probably think they are God's gift to the hobby. But a lot of them have also helped advance the hobby. They're the ones who are always into the latest technical advance in the hobby trying to push the envelope so to speak.

There also comes a time when a person tires of the constant battles both on and off the air and just wants a nice pleasant place to talk without having to worry if they're going to be insulted or jammed off the air.

It took a lot longer to wear me down but in the last few years I lived in southern California I spent very little time on two meters.

Well, all has come to a happy conclusion in my problem.

It turned out that George was out of town and unreachable for the month or so that I'd been trying to contact him, and he'd left the situation in the hands of his eldest offspring.

This fell through the cracks, and as George wasn't able to check his email, he couldn't know this had happened. However, I finally got hold of him and he sent me a money order to resolve the issue.

All's well that ends well. 73, ajr

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 MAY AND FORECAST FOR 27 MAY - 29 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 66/0

GOES satellite data for 25 May
Daily Proton Fluence >1 MeV: 4.6E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.8E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 May 28 May 29 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 May: 67/0

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled, with a active
period 12-15UT

Estimated Indices : A K Observed A Index 25 May
Learmonth 13 3223 4332
Fredericksburg 8 10
Planetary 12 11

Observed Kp for 25 May: 3432 2332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 May 10 Quiet to unsettled
28 May 10 Quiet to unsettled
29 May 35 Active to minor storm
COMMENT: IPS Geomagnetic Warning 15 was issued on 26 May and is
current for interval 29 May to 5 June.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
26 May normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 May normal normal normal
28 May normal normal normal
29 May normal normal normal-fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
26 May 10 near predicted monthly values, with spread F observed
during local night.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
27 May 10 Near predicted monthly values
28 May 10 Near predicted monthly values
29 May 10 Near predicted monthly values

COMMENT: IPS HF Communications Warning 18 was issued on 26 May and is
current for interval 30 May to 5 June. Obs Townsville MUFs: near
predicted monthly values. Obs Hobart MUFs: 15% depressed in the first
half UT day and no data available for the second half UT day.

3744. GB2RS News 28th May 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-26 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <801448203snx@llondel.demon.co.uk>
Source record: 245862
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 28th of May and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:

The RSGB's weekly DX News Sheet has a new editor;

The first legal amateur radio activity in North Korea has taken place.

A group of British operators leave the UK this week for a major 6m operation from the Cape Verde Islands

And Sporadic E has been reported on the two metre band.

As from this week, the RSGB's weekly DX News Sheet will be edited by Chris Page, G4BUE. Chris will be printing and despatching the News Sheet himself immediately after completing the editing each week. This will enable DX News Sheet to include late news items which break on the day that it is posted, making it even more up to date than at present. DX News Sheet will continue to provide the most up-to-date news about DX stations, Islands On The Air operations, and contest news on a weekly basis. Non-urgent features about DXing and contesting etcetera will be compiled into a 16-page monthly magazine to be called "The DX News Magazine", and which will be sent to all DX News Sheet subscribers at no additional cost. All material for inclusion in DX News Sheet or the new magazine should be sent to Chris Page, G4BUE, whose address is correct in the RSGB Call Book. DX items may also be FAXed to Chris on 01 903 814 594, or sent to him via the PacketCluster system. For a free sample copy of the DX News Sheet, please write to RSGB Headquarters, Lambda House, Cranborne Road, Potters Bar, Hertfordshire, EN6 3JE, or telephone 01 707 659 015.

The 50MHz Cape Verde Islands expedition group led by Geoff Brown, GJ4ICD, leaves the UK on the 30th of May and should be active as D44BC from Thursday the 1st to the 14th of June. 6 metre operation will be centred around 50.110 MHz on both CW and SSB. The group will also operate on all bands from 10 to 160 metres using D44BC's station.

Now news of some special event stations at home and abroad:

GC4TTA is the callsign being used from 0900 to 1700 UTC today, Sunday the 28th of May, from Penrhyn Castle, Bangor, in Gwynedd {pronounced "gwinn-uth"} by the Dragon Amateur Radio Club. It is celebrating the National Gardens Open Day and garden tour at the Castle.

GB2EV is being operated by the Horndean and District Amateur Radio Club from the Military Vehicle Rally at Southsea Common in Hampshire, from now until Monday the 29th of May.

A special event station will be operating from Wainhouse Tower, Halifax, today, Sunday the 28th of May and tomorrow the 29th, by the Halifax and District Amateur Radio Society in conjunction with Rishworth School Amateur Radio Society. The callsigns used are G2UG and G0SQA.

The G7 nations will be holding a summit meeting in Halifax, Nova Scotia, in Canada next month to discuss financial and political matters. To commemorate the event, the Dartmouth and Halifax Amateur Radio Clubs will operate two special event stations, CG7D and CG7H, for the whole month of June. Their primary objective will be to work amateurs in the G7 group of countries, which includes Great Britain. These stations in Nova Scotia have been granted the use of the prefix CG7 - normally reserved for British Columbia - by the Canadian federal government, which makes them unique.

Andy Adams, GW0KZG, will be operating as GW0KZG/MM from onboard the Royal Research Ship Charles Darwin from now until the 20th of June. Operation will be on 2 metres SSB using 100 Watts to a 12-element beam. The ship is presently located off the north-west coast of Scotland, and will sail off the west coast of Ireland to Barry, South Wales, by the 20th of June. Andy will be activating a number of "wet" locator squares during the voyage. Look for him around 144.240 MHz between 1200 and 1300, and after 1800 UTC.

Now some items of HF DX news from the RSGB DX News Sheet, which this week was edited at RSGB HQ:

Amateurs from the USA, Japan and Europe will accompany Taiwanese operators led by BV2RA (a senator in the Republic of China government), and BV5AF, President of CTARL, in an expedition to Pratas Island from the 25th of May to the 5th of June. BV9P will operate on all bands CW, SSB and RTTY, with some 50 MHz and satellite activity planned. A news release from CTARL stated that the BV9P DXCC application has been pending for the past two years because of procedural difficulties within the ARRL, but it now seems clear that all potential concerns have been removed.

The first ever authorised amateur radio activity from North Korea took place on the 14th of May as P5/OH2AM. A group including OH2BC, OH2BH and OH0XX were in North Korea for just 17 hours, limiting on-the-air time to 20 QSOs, on 14MHz SSB and 7MHz CW. Four HF and VHF transceivers were presented to a delegation from North Korea's Telecom. These will be used for training, and a full amateur radio operation is planned for later this year.

Next the Rally News:

The Maidstone YMCA Mobile Rally is being held today, the 28th of May, off Cripple Street at Loose, south of Maidstone. The event features amateur radio, CB and computer stands and the doors open at 10.30 am.

The Trafford Rally is also taking place today, Sunday the 28th, at the Greater Manchester Exhibition and Events Centre, in the centre of Manchester. The event features the usual traders and a bring and buy stall plus an RSGB information and book stand. Doors open at 10.30 am.

Plymouth Radio Club's annual radio and electronics fair is taking place today the 28th at Coombe Dean School in Plymstock, and not at the address shown in the May RadCom. The event features over 25 stalls with electronic, computer and radio components, a bring and buy stand and bookstall, and the doors open at 10.30 am.

The East Suffolk Wireless Revival - the Ipswich Rally - is taking place at the Maidenhall Sports Centre, Stoke Park High School, Maidenhall Approach, Ipswich today, the 28th, starting at 10.00 am. The event features a car boot sale, radio check facility, specialist groups and local club stands, Novice licence entry and a vintage wireless show. Talk-in by GB4SWR will be on 2 metres channel S22.

Next Sunday, the 4th of June, the Spalding Amateur Radio and Computer Rally will take place at Springfield Gardens, Spalding. Further details may be obtained from G4TWR on 01 775 722 940.

The manager of the Scarborough Amateur Radio Society Radio Electronics and Computer Fair, to be held on Sunday the 30th of July, has changed address. Ross, G4ZNZ can now be contacted at 4 North Street, Nafferton, Driffield, East Yorkshire. His new number is 01377 257074.

And news of one rally cancellation:

The Gordon Schools Amateur Radio Club has announced that the North of Scotland Amateur Radio Convention - the Gordon Rally - which was scheduled for Sunday the 18th of June, has had to be cancelled.

Now for the HF contest news:

The CQ WPX CW contest is taking place this weekend, and finishes at 2400 UTC on the 28th of May. The exchange is an RST report and serial number and the contest is on all bands from 10 to 160 metres, excluding the WARC bands.

Next weekend, the 3rd and 4th of June, is the RSGB National Field Day, one of the RSGB's flagship HF contests. This CW event involves club stations operating portable and the rules are in the April edition of RadCom.

The RSGB Islands On The Air contest will take place on the 29th and 30th of July and there will undoubtedly be many island DXpeditions taking place specifically for the contest. In order to make sure that your plans do not clash with those of another group, details of all IOTA contest island expeditions will be published in DX News Sheet as they are received. If you are planning an island DXpedition for the IOTA contest - even if it is only the Isle of Wight! - please send details to the new editor of the DX News Sheet, Chris Page, G4BUE, as soon as possible.

Next some VHF contest news:

Next weekend there are several 50 MHz contests. The IARU 50MHz contest runs from 1400 UTC on Saturday the 3rd to 1400 on the Sunday. Two RSGB events take place on the Saturday only: the first 50 MHz Backpackers contest is between 1300 and 1700 UTC, and the 50 MHz Trophy contest will be between 1400 and 2200 UTC. The rules of all of these contests appear in the April RadCom.

Now some repeater news:

The 23-centimetre voice repeater in Wolverhampton, GB3MM, will shortly be operational from a new site. The repeater should be put on the air on the 3rd of June on channel RM6.

Now some packet radio news:

A new North London BBS, GB7TUT, will commence operation on Thursday the 1st of June. Direct access will be on 144.550, 432.650 and 70.4875 MHz. The new BBS is a joint co-operation between the Southgate and Cheshunt and District Amateur Radio Clubs and is located at Ponders End, Enfield.

From this week, there is a new GB2RS news broadcast on 70 centimetres for the Glasgow and North Ayrshire area. The 10.00 am broadcast will be transmitted on 433.525 MHz FM by Vic, GM4HCO, in addition to his broadcast on 144.525 MHz at that time. Also, Vic is starting a new broadcast at 6.00 pm on both 2 metres and 70 centimetres on a trial basis.

And now the solar factual data:

The period from the 15th to the 21st of May saw solar activity at low levels and the geomagnetic field range from quiet to sub storm levels. Sunspot numbers declined each day and ended at 20, with a mean of 49. Solar flux levels increased to peak at 95 units on the 17th, but then declined to 75 units by the 21st. The average for the period was 87 units.

Several C-class flares took place up to the 17th, the largest being a C4/SN on the 16th. The electron fluence remained at a moderate level throughout. X-Ray flux increased from A9.3 units on the 15th to B2.7 units by the 17th and then declined to B1.4 units on the 21st. The average for the period was B1.3 units.

The 90-day solar flux average on the 21st was 81 units, one unit down on last week. Geomagnetic activity started at quiet levels with an Ap index of 5 units. Sub-storm levels were reported on the 16th and 17th, with Ap indices of 38 and 35 respectively. Activity then declined to quiet levels, and an Ap index of 17 units was the average. The state started at "mag alert" then returned to "mag quiet". The aa indices, as supplied by the British Geological Survey for the period from the 9th to the 15th of May, declined from unsettled levels on the 9th with 19.0 nanoTeslas, to quiet conditions for the remainder of the period. Levels were down to only 7.8 nanoTeslas by the 15th, and the average was 12.7 nanoTeslas,

about K2.

I'll repeat the figures: spots - 49, flux - 87, Ap index - 17, X-Ray flux - B1.3.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 12th to the 18th of May, saw levels increase from the 14th to peak at 7.8MHz at 10.00 hours on the 16th. This was due to a pre-auroral enhancement. Levels then collapsed and three hours later were at 4.5MHz. On the 16th, G4FVP in County Durham reported a good aurora on 6 metres. Over the next couple of days, ionospheric MUFs slowly increased and by the 18th they were at 6.6MHz. The darkness hour lows declined from 4.1MHz on the 13th to 3.0MHz on the 17th. The daily highs averaged 7.1MHz with the darkness hour lows averaging 3.6MHz. The daytime highs took place in the early evening, except for the 16th when due to the start of the magnetic storm they peaked at 10.00 hours. The darkness hour lows took place between 03.00 and 04.00 hours every day. A Sporadic E opening to the Eastern Mediterranean on 2 metres was reported during the morning of the 20th.

I'll repeat the figures: highs - 7.1, lows - 3.6MHz.

And lastly the solar forecast.

This week solar activity is expected to be very low. A small increase in spots and flux levels is anticipated later in the week. By next weekend solar flux levels should be into the mid 70s. Geomagnetic activity is expected to be at "sub storm" levels for the first half of the week and then decline to unsettled levels by next weekend. Ionospheric MUFs during daylight hours are expected to be about 16MHz for the south and 14MHz for the north, but levels may increase later in the week. The darkness hour lows are expected to be about 10MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whiskey Bravo and G7 Uniform Romeo series, and Novice calls in the 2 0 Alfa Lima and 2 1 Echo Delta series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

jsoohoo@netcom.com (John Soo-Hoo) wrote:
>Privite/Closed systems are almost as rare as open repeaters on 70cm.

I'm not surprised. Closed 2 meter systems are rare here as well...

>hams recognize the 2m band is conjested
>most people don't bother applying to put up a repeater on 2m. They look
>to 70cm and 1.2 Gig.

Unfortunately, the UHF band is in simmilar shape. I know there are at least
two areas of Texas where there are no UHF channels available. There haven't
been any 2 meter channels available for many years.

By comparison, there are very few 1200 MHz radios in Texas. I would expect
this band to be very popular in CA...

I'll tell you the same thing I told Roger. Getting rid of SCRRBA won't make
the closed systems go away. Whatever you guys do, you will have to serve the
trustees of the closed systems just as you serve those who want to put on new
open ones. If you don't, you'll be guilty of the same thing you accuse SCRRBA
of...

This is exactly why my repeater is on UHF, and closed. My radio has been
jammed by people I don't even know...just because it's closed.

>I've met some of these folks who moved to 440 and I'll be the first to
>say that some of them have enormous egos and probably think they are
>God's gift to the hobby.

You mean they're not??? :) :) :)

>without having to worry if they're going to be insulted or jammed off
>the air.

AMEN. Couldn't have said it better myself. I get so tired of being told what
a bad guy I am simply because I feel someone should support the radio they
talk on. Jeeeez! It's only a hobby!

>It took a lot longer to wear me down but in the last few years I lived
>in southern California I spent very little time on two meters.

I have three channels programmed in my 2 meter radio... 162.4, 162.475, and
162.55.

Forgive me, but your comments do not indicate that you are at all familiar with UHF **in So. Cal.**. In the comment below, you indicate agreement with the concept of open coordination meetings, dispute resolution, etc. SCRBBA, which you have been defending, features none of these things. None. They don't even allow non-repeater owners to be members.

See, you gotta own a coordinated repeater to be a member, to get coordinated, you gotta be a member. Sounds kind of like a certain Nevil Shute novel, doesn't it.

>>Sure, there are disputes, but they are resolved in a public forum, and the

>closed system's coordination arbitrarily, that coordination group will have
>its butt sued off.

Actually, that's rubbish, about the suing. All that crap about how they can sue you for de coordinating them is just that, crap, and indicates a misunderstanding of the law. To win a lawsuit, you have to be able to show damages. Little problem with this hey? No damages, no money. We're talking contract law anyway. No punitive damages in contract law, friends. Damages are therefore limited to the amount of the breach of contract (if you can

convince a judge that there was a contract prohibiting de-coordination. Never happen. Never. Damages, even in a hypothetical situation in which the old repeater owner won (no chance) would be limited to the depreciated value of the equipment less its sale price. In other words, practically nothing. And de-coordinating someone a) does not require procedural due process, because coordinating bodies are not state actors, b) does not damage the other party, because he/she can still use the repeater. He just can't interfere with others. Part 97 doesn't allow people to deliberately interfere now anyway, so where are the damages?

No damages, no money.

And forget IIED (Intentional Infliction of Emotional Distress) Despite what you may think, courts don't allow these suits more than once in a gazillion years, and the legal doctrine is very, very strict. Mostly they dismiss them. (And you can sue the filer for abuse of process in many cases).

Lots of chaps like yourself, whom I suspect are more interested in scaring people than in accurately discussing the law, have trotted out that old chestnut about how the old boys will sue you if they get de-coordinated. Maybe they will. But they won't win, and a motion to dismiss should take care of it with no problem whatever. (Not just my opinion. I did some checking.)

>
>How does TASMA handle open versus closed repeater applications?

They allow both. But open repeaters are presumed to offer more access to all, and are therefore preferred, as the best way to utilize what is understood to be a public resources. Therefore there are mostly open repeaters on 2M in So Cal. And excellent ones, I might add.

Bill,

The display just sort of floats on the circuit board. What I mean is there is not a good way of aligning it. It does not sit in a fixed mounted frame. Many times you will find yourself loosening and retightening up the display board after jiggling the display to get it centered. Getting the display centered on the contacts can be done, may just take a bit of fooling around. Icoms number is 206.454.7619.

>I would like some info on the Friedrichaven fest.
>When is it?

Well, according to my information, June 23-25

>Exactly where is is?

It's in Friedrichshafen on the Bodensee (Lake Constance). I don't remember the name of the convention center but it's the largest one in Freidrichshafen, easy to find.

>Is there a flea market as one finds at fests in the US ?

I went to the event in 1992. The flea market was huge. There are also many vendors on display, including Icom, Kenwood, Yeasu, Standard, Alinco, and some other ones we don't get to see in the states.
>
>If there is a flea market, what is the best day to go for that ?

I think Saturday would be the best day. Get there early.

>How much is admission?

I believe it's around 5-7 DM

>Is there a parking problem?

Well, parking is difficult, but not a problem. There are huge lots, and you may have to walk a little ways, but you'll find a spot (eventually).

>I'm near Wurzburg, looks like a straight shot down A7 to Ulm then
>South on 30 ?

Sounds right. Freidrichshafen is on the North side of Lake Constance. It's a beautiful city, and there's usually some sort of fest in the town on the same weekend, so if you have a chance, go down by the harbor and enjoy the beautiful park.

The solution is to do what I did, and put an ARC-5 set in the car with a second alternator to power it. This discourages theft, because most auto thieves don't have a forklift to carry it away.

While an ARC-5 probably has no value at your local pawn shop (and if it did, I would have got rid of the piles of them in my garage), the truth is that your brand new Kenwood or Icom probably has about as little value there. Fences wouldn't know what to do with the stuff, unlike CBs or cellular phones. So I would say that a vanity plate would discourage expert thieves by informing them that the stuff there is of no use.

However, altogether too many thieves are less than expert. Hell, they left the car with all the radio gear in it alone and stole my '85 Chrysler with the blown head gasket and 260,000 miles on the engine. There was definitely some limited intelligence at work here, and you cannot easily predict what the terminally stupid will do.

I wouldn't put anything in my car without first engraving it (preferably in several places) with my state and drivers' license number. The police can trace that instantly, and they can't do so with a Social Security number.

Roger that! I was driving across the Del. Memorial Bridge during a snowstorm some years ago. The snow was wet at sea level, but as I drove higher up the bridge it got progressively dryer. I reached over to tune my 10m rig that had been temporarily installed (sitting on a leather seat) and got zapped so bad my arm and shoulder were numb for 30 miles or so. Watch out for things whipping past your antenna - it can strip electrons like crazy!

3755. Help -- UNID 29.66 MHz repeater

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-26 00:00:00 UTC
From: decrawf@nervm.nerdc.ufl.edu
Message-ID: <3q4pmm$lb0@huron.eel.ufl.edu>
Source record: 245873

I've been hearing an unidentified repeater on 29.66 and would appreciate any help in IDing it. It seems to be in the Caribbean area, and is usually audible whenever NP2Y (St. Thomas, 29.66) is also in. Squelch break tones are a "doorbell" 2-note chime when the repeater carrier drops, and a morse "A" is heard when the user input drops carrier. Unreadable (distorted) voice IDs are heard also. Have heard an HC3 station working through this one. Any clues, anyone?

Please respond via e-mail, will post summary.

Tnx in advance.

Heck, just the contrary.. I know a story where the funny ham plates
got the car back!

Years ago..like 1982, a buddy of mine had his 280ZX stollen in LA.
He had a nice dual band radio in it, and the car was in pretty
good shape. Anyway, the dufus that stole the car didn't remove
the plates! The 1x2 ham call sign must have stood out at role
call or somethin, he got nailed two days latter about 30 miles
from the scene of the crime...driving the car.

Have you considered an RF choke? This would allow the DC to bleed off to
ground, while keeping the RF from flowing through it.

Actually, many older, tube-type transmitters used to incorporate a choke
from the antenna terminal to the chassis. In addition to draining any static
that had accumulated on the antenna off, it also served as a safety device
in case the capacitor between the anode of the output tube(s) and the Pi
network shorted.

Seriously, consider splinters. Find two weak and/or inactive repeaters which are spaced 25khz apart and put yours 12.5khz offset right in the middle: A splinter repeater. Such a repeater should be at least at 5000 feet and have at least 100w to the antenna.

They do it on the 461-465 commercial band, so why not migrate that practice down 15mhz . 5khz dev. splinters should be ok with a least 40 miles repeater seperation.

If it has loads of AC hum on it, it might be that grinder
out in Colorado. I'd be ashamed to have my callsign
on it if it still sounds like that.

There is one in the Washington, D.C. area which identifies
just fine. You won't hear it unless you go in using
4A PL. That's about the only sensible way to run
a 10 meter repeater--unless you like hearing heterodynes
when the band is the least bit open.

>Dave
>WA4QAL

This would work except for the high impedance on the feedline. At 3000 volts, a 10K resistor would conduct 900 Volt-Amps. To avoid consuming a similar amount of power with a choke to ground, the choke would need to have a value of something like 7 or 8 mh (not uH), a voltage rating of about 5KV and no internal resonance on any of the bands of operation.

The choke concept may still have merit, though. The tuner is a floating pi network with an isolation balun at its input. The balun sees 50 ohms in and 50 ohms out. Given that the inductor in the pi network can conduct the static charge to the balun, maybe that's where I should install the choke? This might risk unbalancing the tuner, but maybe I could use two chokes, one on each leg. That should bleed the charge, protect the rig, and not upset the tuner.

Tnx for the idea - you can bet I'll have this working before next winter. <g>

In NH, our only option is to get a standard vanity plate, not one with the thunderbolt or any other indication that it's a special license. Other hams recognize the call sign, but most "outsiders" won't know what the jumble of letters mean. Get your calls on the plate, but not on a special ham plate?

When the earthquake hit here in LA a while back a lot of microwave links
got "tweaked" - the gear worked OK, but the dishes needed repointing.
After all 1 degree tweak over the length of a shot can result in a
non-working system. I expect that a twister will have some effect on
dish alignment, or the structure itself.

The other two statements in that answer include the word `tube' so
the first statement should be read ``preserving old-radio techniques'',
not ``preserving old radio-techniques''.

A subtle but important distinction.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 MAY AND FORECAST FOR 28 MAY - 30 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 66/-1

GOES satellite data for 26 May
Daily Proton Fluence >1 MeV: 2.2E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 6.4E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 May 29 May 30 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 May: 66/-1

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 26 May
Learmonth 8 2222 2322
Fredericksburg 5 10
Planetary 8 12

Observed Kp for 26 May: 2224 4232
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 May 10 Quiet to unsettled
29 May 35 Active to minor storm
30 May 35 Active to minor storm
COMMENT: IPS Geomagnetic Warning 15 was issued on 26 May and is
current for interval 29 May to 5 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
27 May normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 May normal normal normal
29 May normal normal normal-fair
30 May normal normal-fair poor-fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
27 May 14 near predicted monthly values, with spread F observed
during local night.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
28 May 15 Near predicted monthly values
29 May 10 Near predicted monthly values
30 May -10 About 15% below predicted monthly values

COMMENT: IPS HF Communications Warning 18 was issued on 26 May and is
current for interval 30 May to 5 June. Obs Townsville MUFs: near
predicted monthly values. Obs Hobart MUFs: 15% depressed in the first
half UT day and no data available for the second half UT day.

>that so far has had no activity (for 4 days from what I understand) without
>the blessings of SCRBBA. What other course of action can a group take if
>SCRBBA ignores them?

Dayton was just a couple of weekends ago. I know of two systems that
were totally dead for the duration. Quiet periods do happen...

They might want to check a little longer - like a few months.
I personally know of a system that was down for 3 months (and SCRRBA
was notified of the problem) due to a lightning strike meltdown of
the transmitter, duplexer, feedline and antenna. It took a little
while to scrape up the $$$ to purchase replacements...

Has the group put up it's system yet on the test pair? Or taken
secondary status on another pair? Having a working kerchunkable system
goes a long way in proving that you are not another paper system. For a
number of years the way to get a pair was to build your box in the
garage on the test pair (441.875 in, 446.875 out, with a PL tone) (I
think that was the test pair), and get it working. This is the spot
where the process stops for 85% of the systems - they never get
finished. Most never get started. Why allocate frequencies to systems
that exist only on paper? A system under construction, even a simple
one without a autopatch or a remote base located in the worst of the
"RF black holes", would prove that they builders are serious and provide
neighborhood coverage, even with a 1/4 wave whip on a mag mount on top
of the cabinet as a temporary antenna. Once you have a working system,
you'd turn in your Request For Coordination, complete with a snapshots
of the cabenet front and rear, and of the site, a copy of a site
agrement and the location of the garage system and the PL tone it was
on... (and the RF channel if it was a secondary box as opposed to a test
pair box). Expect a member of the frequency coordiation committe to
pop up on the garage system and prove that it really existed.

This is how it was several years ago. I don't know (first hand) how
it is now.

>>is there an alternative technique?

If the static charge accumulation rate is small, that will work, but if
the static charge builds rapidly, such as the charge induced during a
nearby thunderstrom, it won't. You'd need to estimate the charge
accumulation in coulombs/sec that can build on your antenna before
corona can set in, and see if the shunt resistance is sufficiently
low to hold antenna voltage below 10,000 volts (roughly the corona
onset voltage). A 10M resistor would be sufficient to discharge a
millicoulomb/second. If the rate of charge accumulation is greater,
you'll still get corona (and static noise). A way to estimate the
charge capacity of the antenna is to determine the antenna's capacitance
to ground, and use the RC time constant of that capacity and the bleeder
resistance to see if the charge can be dissipated in a reasonable time
at a voltage below corona breakdown.

>Have you considered an RF choke? This would allow the DC to bleed off to

>in case the capacitor between the anode of the output tube(s) and the Pi
>network shorted.

A choke can be a good idea, but with a caveat. You have to watch out for self-resonances in the choke. If the choke is self-resonant near the operating frequency, or a harmonic of the operating frequency, then you may have a problem. The AC voltage across the choke will be rather large in the case above, and a choke with an insulation value sufficient to withstand it is a must. To have negligible effect on the signal, the choke should have a reactance at least 10 times that of the circuit impedance at the point where it is attached. It's probably going to be difficult to make such a high reactance choke while keeping the self-resonances from stray interwinding capacitance low enough to keep the self-resonant frequency far enough above the operating frequency.

An antenna with a very high RF impedance and a high capacitance to ground is a tough problem for static control. You have to have a shunt impedance low enough to keep the charge bled down to a point where corona won't set in, but at the same time the shunt impedance has to be large enough to avoid loading the desired signal.

>and find out where you live and walk right in. This was brought up by
>a fellow ham that is an insurance salesman at a club meeting. Kinda
>makes sense!

A couple of things to consider here. First, the average thief is
not smart. Typically, he's a junkie who's trying to get money
for his next fix. He'll tend to smash and grab for the most part.
If he has some smarts, he'll pass by targets that look hard or
unpromising. That's why things like visible warning stickers,
The Club, and alarms have some value. Second, for the rare "smart"
thief, he's going to go after the high value items that are
easily fenced. He's more likely to just take your car since it's
worth lots more than the radio, and easier to dispose of through
a chop shop.

It's unlikely that the average thief has access to a Callbook,
or even knows what an amateur callsign is. If he does case
your house, he's going to be interested in things like cash,
jewelry, guns, and other items that are easily fenced. There
isn't much of a black market for amateur gear, and much of it
is heavy, bulky, and/or cryptic as to purpose. So thieves
generally leave it alone.

When thieves ramsacked my house several years ago, they took
a lot of stuff (TVs, VCRs, stereo equipmment, etc), but they
totally ignored the several thousand dollars worth of amateur
radio gear. A good rule of thumb is that if you don't commonly
see the item in a pawn shop, thieves aren't likely to steal it.
I don't know about where you live, but I almost never see amateur
gear in a pawn shop around here.

That doesn't mean thieves won't *ever* steal amateur gear, they
do from time to time (hell, they've been known to steal refrigerators
and washer dryer sets), but mostly those thefts are by teenagers

or by others who have no idea what they're taking, and the amateur gear just gets swept up with any other portable item that looks expensive.

I'm not concerned about showing amateur plates on my vehicle. I don't think they attract any more, or any less, attention than any other vanity plate. They certainly don't stand out more than all the antennas poking up from the vehicle.

It is not unusual among coordination groups to allow only trustees to be
members. I don't personally think this is the most fair way to run an
organization, but many coordination groups work this way.

>Actually, that's rubbish, about the suing. All that crap about how they can
>sue you for de coordinating them is just that, crap, and indicates a
>misunderstanding of the law.

No, Roger it's not rubbish. The Texas VHF-FM Society has BEEN SUED for
exactly that. The guy who sued us didn't sue for damages, he sued for
slander, claiming that the article printed in the Society newsletter
describing the situation was slanderous. Yes, it was a frivilous lawsuit, and
no, the guy didn't win...but it tied the FM Society up in court for almost two
years. It effectively shut down frequency coordination in Texas for the
duration of the lawsuit. Was there damage done to the Society by this bozo?
Absolutely. You don't have to win a lawsuit to do damage. Defending it is
bad enough.

That is not a law. It is part of the agreement with the credit card
account issuer. It is entirely a civil matter and almost never
enforced because the credit card company wants your business.

Personally I feel that the group should just put up a repeater on a
pair that has no activity. They have taken the initial step to
notify SCRBBA that they want to apply for a frequency pair. But
SCRBBA hasn't responded.

>Has the group put up it's system yet on the test pair? Or taken
>secondary status on another pair? Having a working kerchunkable system

>on... (and the RF channel if it was a secondary box as opposed to a test
>pair box). Expect a member of the frequency coordiation committe to
>pop up on the garage system and prove that it really existed.

The group has (as I observed) put up a system on 440, but it was not on the test pair, but they have encountered some problems and are working on it. But the machine they wish to ultimately put in service will be a turnkey solution so constructing a system is not a problem. They will have to put all the equipment at the site (on a hill top close to a bunch of other commercial repeaters).

I suppose putting a repeater on the test pair could work, but right now there are 3-5 repeaters that have been there for over 3 years. Putting up a repeater on a pair that has no observed activity will serve a dual purpose. It will show that the group is serious and that SCRBBA has to face them instead of ignoring them. I know this sounds kinda confrontational but what else can they do? They have tested the coverage, and have been waiting for SCRBBA to respond.

This message is to publicly thank these San Francisco Bay Area amateur radio operators for getting out of bed at a really rude time on a sunday morning to help the Red Cross medical teams at the 1995 San Francisco Bay to Breakers race.

Through the eforts of these operators and the 160 medical and support staff, two people were snatched from death's door and saved. And scores of others were assisted with everything from chest pain to chafed thighs.

A big 73 to these folks!

> Sez who? My Alinco DJ-580T does.

Ah, but that is being replaced by the un-mod-able DJ-582T. The 580T isn't being manufactured for sale in the US anymore. Note the 580T is now on sale most places. Dealers are just selling off their remaining stock. However, the price of a 580T w/ discount is still a better value than a full-price 582!

STOLEN

One TM741A from KC6ZKO in Corte Madera, CA., sometime between Tues/May 23rd and Wed/May 24th from his vehicle. Noticeable marks are that the power cord was cut as well as the UHF coax.

Chris/KC6ZKO had two 741 radios, One is not stolen and I will repost as soon as he takes his other radio out to give the singular serial number, however, we do have both sn's at the moment. One sn is 30301614, and the other is 40200188. If you see either of these numbers please let us know! Thank you.

If anyone sees anything that resebles these charateristics, please contact N6ZVZ at 415-457-7944. Collect calls will be accepted.

Jeff:

With the amount of effort you have been putting in defending the "need" for CW as the only way the world can really seem to communicate, I am surprised that you consider Amateur radio "only a hobby". I am not one, but there a lot of hams that feel that attitude demeams the "service".

Please be sure to note the sarcasm in the above paragraph - I am just poking a little fun at you. In other words, " :) "

But I think that amateur and professional in terms of radio services only refers to whether someone is getting paid or not. The quality of the Amateur service doesn't take a back seat to the 'professional" radio business (take it from someone in the business). The best part is, Amateurs don't do it for money.

Quite frankly, there is _no_ rig ever made that works well on any voltage with a rubber duck. Think of it as a flexible dummy load. It's not a problem with the rig, it's a problem with the inherent physics of a sub-wave stub.

SB DX @ ALLBBS $OPDX.208
Ohio/Penn DX Bulletin No. 208

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 208
BID: $OPDX.208
May 29, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, AH0W, KJ4JH, W5VBX, BV5AF, DF4RD, F6AJA, G1FYC, JH2PDS/1, JI1DLZ, JR2BNF, and DL9GOA & DX News Letter for the following DX information.

3Y, BOUVET. The DXNL reports that UA9OBO and RW3GW (perhaps together with other operators) will leave St. Petersburg in June to take part in a scientific expedition to the Antarctic lasting several months. The most interesting destination of the expedition is Bouvet Island scheduled for the beginning of November 1995. Bouvet Island ranks 11th on the most recent "OPDX/NODXA Most Wanted List". They already have all necessary permissions from Norway. The call will probably be 3Y/R0FL.

6 METERS. Watch those seasonal openings on this band. Reports from stations on the east coast in the U.S. and Canadian indicate hearing the CU3URA/B beacon in the Azores.

BV9P, PRATAS ISLAND. The Chinese Taipei Amateur Radio League (CTARL) is now active from the Taiwanese Tung-Sha Dao (Pratas Island) until June 5th. This is their third DXpedition to Pratas Island which includes an international team of amateur radio operators from USA, Japan, Europe and 13 Taiwanese operators. The group is led by Mr. Ken Chang, BV2RA, a Senator of the R.O.C. Government and Dr. Bolon Lin, BV5AF, the President of the CTARL. Operators mentioned are: BV2VA, BV4QA, BV2FB, BV2KI, BV7BK, BV2AP, BV2TA, BV2DD, BV4FH, BV4ME, JH1KRC, JH4RHF, N7NG and OH2BH. As of May 28th, the group has reported that they have worked over 10,000 QSOs. The following modes and frequencies will be used: CW - 1827, 3504, 7004, 10134, 10424, 18074, 21024, 24894 and 28024; SSB - 1827, 3555, 7045(EU), 7065(NA), 14195, 18125, 21295, 24945 and 28495; RTTY - 7082, 14082 and 21082; and 50 MHz - Some 50 MHz and OSCAR operation are tentatively planned. The main station is an FT-990 and a FL-7000 amplifier, but reports indicate the team can only run about 300 watts due to the unstable power station on the island. Also, some of the team members are having health problems due to the very high temperature on the island

(nothing serious, so no cause for concern at this time). The QSL Manager for the operation will be Steven Wheatley, KU9C, 12 Netherton Terrace, Morristown NJ 07960, USA.

CY9, ST. PAUL ISLAND. A fax received from Dan, WA4DAN, indicates that everything is a GO for this operation. The boat charter, travel arrangements and the Canadian Coast Guard landing permission have been all acquired. Operators AA4VK, WA4DAN, KW2P and W5IJU will be active from July 27th until August 2nd. Operators will sign homecall/CY9. Operations will be on CW/SSB/RTTY, 160-6 meters and the satellites. Yagi's will be used on 40-10 meters including a 2 element 40 meter yagi. QSLs and donations for the CY9 operation should be sent via WA4DAN.

E3, ERITREA. Accoding to Jin, JF1IST, he will be going to E3-land for UN business between May 27th and June 11th (This schedule may change). Jin plans to operate on 160-10 meters, 50 MHz; and the satellites AO-10 and AO-13, but states this is not a DXpedition. He has requested E31A or E31J for callsigns, but a station signing E31FAO was reported by the Tokyo PacketCluster which may be Jin. E31FAO was heard around 14280 and 21283 kHz between 1300 and 1500z.

GB, STEEPHOLM ISLAND EXPEDITION. Stroud Radio Society announced their plans to activate this island between June 17th and 19th. The club will be taking part in the Practical Wireless 2 meter Low Power Contest which is being held on Sunday the 18th. Operations will be on all HF bands, 50 MHz, 2 meters and on both CW and SSB. Steepholm qualifies for the IOTA award as part of the EU-120 group, and is also in a "wet square", ST 26, for the Worked All Britain awards. Callsigns in use during this period of operation will be as follows: GB0SRS on the HF bands, GB2SRS on 2 meters outside of the contest period, GB6SRS on 6 meters and G4SRS/P (the Club call) during the 2 meters contest. QSL via the RSGB bureau or if preferred, via G0ATX the QSL Manager.

IOTA NA-031. The South Coast Wireless Society from Pawcatuck, CT, plans to activiate Block Island, RI (NA-31) during the IOTA contest July 29 and 30. They will be active on 10, 15, and 20 meters, and possibly on 40 and 80. Callsign is to be announced. This operation will be the first from NA-31. (From, Joseph A. Natale)

KH4, MIDWAY. The 59(9) DX REPORT, was advised that Rick, KH6JEB, would be active from Midway Island (OC-031) as KH6JEB/KH4, from May 26th possibly through May 28th. There were no QSNs reported as this bulletin was going to print. It would be advisable to continue to listen to 14195 kHz for possible updates. ("You never know if a delay has taken place.")

PRINCIPALITY OF SEBORGA (FALSE REPORT). It has been rumored that the ITU has allocated the T8A-T8Z call-block to the Principality of Seborga. Jean, F6AJA, reports talking to Ted, F8RU, who is retired from ITU in Geneva and has phoned the current ITU manager. Ted reports that at this moment NO allocation (T8A-T8Z) has been given to Seborga and this information is absolutly WRONG.

T2, TUVALU. Just a reminder that Masa, JE1DXC, continues to be active from the Pacific and will be active next from here June 1-6th, as T20XC. Activity will be on all HF bands in CW/SSB/RTTY. QSLs for all activities are via his CBA or bureau. If you send your card direct please remember: In Japan one IRC is better than one US-dollar which is not enough for return postage (per DXNL)!

UPCOMING CONVENTIONS.....
ARARM CONVENTION. The Association of Radio Amateurs of the Republic of Mexico (ARARM) welcomes hams worldwide to its 35th annual convention to be held this year in Guadalajara, Mexico, 27-30 July 1995. The convention will be held at the Hotel Malibu, one of Guadalajara's luxury resort convention centers. Rooms at the hotel will be available for approx. US $36.00. The convention will offer forums on DXing, packet radio, repeaters, satellite and emergency communications. Families are welcome to attend, and there will be a special cultural program for the spouses. Additional information/reservations: Sergio Valdes Sada XE2RJ at 011-52-83-357113 or 011-52-83-353368

NEW ORLEANS DX CONVENTION. The 1995 Fourth Annual New Orleans International DX Convention will be held at the Royal Sonesta Hotel on Bourbon Street on August 25th and 26th. Scheduled will be DXpedition presentations on Conway Reef by NI6T; South Georgia by WA3YVN; 4J1FM by AH0W; Belize by W5ZPA; Thailand by W5VSZ; Ghana by K5VT; and technical presentations on arrays, towers, antenna efficiency and angle of radiation. Other activities include DXCC card checking by ARRL; DXCC desk update by NC1L; DX Advisory Committee update by K5UR; and DXer of the Year Award to K5VT at the gala banquet. A hospitality suite sponsored by the Delta DX Association will be open Fri & Sat evenings. For info and registration form contact "Wondy" Wondergem, K5KR, at 504-837-1485 days or 24 hr fax at 504-524-2129.

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch.
To access: 1) Dial Number. 2) Wait for first ring and dial four ones ("1111"). (Note: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

3801. ICOM Battery BP-24 Question

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-28 00:00:00 UTC
From: gtupper@monkfish.nosc.mil
Message-ID: <3q8g9f$nbq@pandora.sdsu.edu>
Source record: 245695

I have an ICOM BP-24, and no longer have the wall charger for
it. The local electronics shop/ HAM shop did not have any
information on the battery pack and were unable to help me.
I would like to know the specs of the pack and the voltage to
apply to either or BOTH the ports on the pack.

A note on the back of the battery states "Charging this battery
with the CM-16 or BC-16 wall charger while attached to an operating
handheld...." So the specs for either of the two charging units
specified would probably help also.

Thanks

Greg Tupper

3802. My CB Linear

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-28 00:00:00 UTC
From: an262119@anon.penet.fi
Message-ID: <060314Z28051995@anon.penet.fi>
Source record: 245696

I just got a new HXT202 for Rad Shack and have picked out a call sine for myself and gotten on the air. I have been having alot of fun. It is just like CB but I can talk alot farther. I wanna hook my Rad Shack HXT to my CB linear amplifer and then to my TV antenna. Can somebody tell me how to do this. I hve a flat wire going from my TV to the antenna. Do I use the same kind of wire to go from my HXT to the linear.

Also the guy at Rad Shack said he put some repeater chanels into my radio. Can someboby please tell me what a repeater is and what it does.

Also can I use my cb handle or do i have to makeup another one. The guy at rad shack said to just makeup a call sine.

Also when I get my linear and TV antena hooked up will I be able to talk to and hear people in other countries and if so on what chanel. My Rad Shack HXT
has 20 chanels I think. Which one do I use to talk to somebody in another country.

Also what chanel do the other truckers hangout on. I tried all 20 chanels and cant find them. I even tried chanel 19 but there was no one there.

Thankyou for all of the help. I hope to talk to all of you on the air.

Keep the rubber side down. Catch you on the flip side.

Bubba

>CB linear amplifer and then to my TV antenna.

The easiest way to do this is as follows:

1. Leave a CB transceiver hooked to the amplifier's "Transmitter" connector
in order to provide a 50 ohm load and prevent oscillation.

2. Connect the "Antenna" connector of the amplifier to the "Antenna" connector
of the HXT202.

3. To test, Key the mike on the CB transceiver and the Push-to-Talk button on
the HXT202 simulatneously. You should now be able to hear audio from the CB
transceiver on your new rig, indicating that everything is working OK.

4. You're ready to go!

Hmm, is that why everyone but fossilized amateurs are abandoning
CW? If it does such a great job, then why are the commercial and
military worlds abandoning it as quickly as possible for newer
digital methods? When everyone is out of step but you, it becomes
time to question your own pace.

[Wow, Gary, i didn't think i'd end on this side of this discussion with you!]

Because they can *afford* the newer technology and because it provides
benefits that they cannot obtain in the old way. Satellites and micro-
waves are a lot more reliable and predictable. CW has its place; we
can't have very many people running 56Kbs on HF. CW wins simply down
there simply because it's rather low bandwidth and uses the human brain
instead of analog ICs or a DSP to do the decoding, which has its place
under poor quality signal conditions. (Please note that i'm not ruling
out use of newer DSPs and clever software to compete in a DX pile-up
someday.) We can't send wide bandwidth signals world-wide in those
bands. CW is cheap, and lots of people can do it at the same time.
How many people on this list could homebrew a 19.2Kbs digital radio?
But i do wish *OUR* pace in this realm were a little faster, especially
in terms of the regs...

>slander, claiming that the article printed in the Society newsletter
>describing the situation was slanderous.

It seems the TVFS editor had bad legal advice. Our lawyer says never
editorialize in public about specific actions toward individuals.
As long as you stick to publishing general policy statements, you
give no grounds for a slander suit. (Publishing the truth is also
a defense, but the truth is often a mallable thing, subject to
interpretation, and is more risky.) Publishing is a risky business
in any event, and any group that decides to publish has to either
be very careful, or have a legal staff ready to defend them,
preferably both. And a liability insurance policy should be
mandatory in these cases to protect the group against large
legal bills and settlements.

>Yes, it was a frivilous lawsuit, and
>no, the guy didn't win...but it tied the FM Society up in court for almost two
>years. It effectively shut down frequency coordination in Texas for the
>duration of the lawsuit. Was there damage done to the Society by this bozo?
>Absolutely. You don't have to win a lawsuit to do damage. Defending it is
>bad enough.

Thanks the to the tort reform that has swept the nation, in many States
you can countersue if a frivolous suit is brought, and collect triple
damages and legal costs. This has become a growth industry in the legal
profession as more companies and individuals have started to actively
pursue these remedies. In some cases, sanctions against the suing
lawyer can be laid, and that is even more effective in discouraging
suits. Once the local legal profession understands you aren't afraid
to go after *them* as well as their clients, they start giving their
clients more conservative advice about what is and what isn't grounds
for a suit.

It's unfortunate that we live in a society where the national motto
seems to be "I'll sue", but that's the way it is. We can either
cower, buckle, and cease to be effective at our primary jobs, or we

can fight back. Tort reform has given us the tools to fight back.
All we have to have is the backbone to use them.

It IS rubbish:

You have proved the correctness of my point. What you said earlier, that if you tried to re-coordinate you would "have your butt sued off" was complete rubbish, and you know it. So what if some old fossil decides to file an unrelated lawsuit about some newsletter? Big deal. And it isn't very expensive to defend against a lawsuit like that. If you guys spent more than a grand, you got gypped. And you should have been able to get the guy for abuse of process.

Furthermore, this is completely unrelated to what we were talking about. YOU said, or at least insinuated strongly, that it was grounds for a lawsuit

if coordination was withdrawn for this or that repeater. Now you trot out some old frivolous lawsuit on an unrelated silly subject in order to prove your "point."

Kind of a lapse there, Mr. Reese. Let's stick to the topic of coordination, and not try to obfuscate by planting the seeds of completely groundless fears of litigation. Completely groundless.

The word "amateur" comes from "amatore" which basically means "for the love of". I like this definition as it inplies radio amateurs are in it for the love of the medium and its use. Many "professionals" don't even like their jobs and can't wait to get home at the end of the day!

You never know. Around here a couple years back, some bozo attached an illegal CB linear to the base antenna of his cordless phone, and then to some sort of roof antenna, in an attempt to increase range. He apparently didn't know that the base antenna is used for receiving only, primarily to keep people from doing things like this. He also didn't know that his amplifier was going into wild oscillation and spewing amazing amounts of stuff on the 10M band. Calls to the FCC did no good, but a quick visit to explain what was going on (by about twenty hams) got it off the air.

>Lewis,

You're right about the smoke Lewis, the method is important. The smoke
could cause harmful effects to the environment. It needs to be
trapped and filtered.

So, they should do what I do: (1) tap into the equipment case with a hole
about the size of a fastfood straw, (2) assure the case is "tight" (I use a
plastic bag for this), (3) slip the straw through a small opening in the
plastic bag {that also used for the cables} and into the hole you
drilled. Be sure the straw is straight - no kinks, etc., (4) apply the
power as stated above; and (4) filter the smoke by, (4a) sucking the smoke
into your lungs, (4b) blowing the air out into the room.

If this is done correctly - no PCBs or vaporized lead (from the solder) will enter the normal air without being filtered, at least to some degree, first. Depending on the CB Linear, having your mouth on the straw when you apply power can be a real rush! NOTE: Please don't substitute a metal straw for the plastic one - One should not get more than one buzz at a time.

Walter Zorn / KF0OS

Legal Note: I'm not a doctor or work in the medical field, and am not sure of any Health or Environmental effects of taking the above actions. This is not the method (position) used or supported by the government or any government contractors that I know of. [That's classified.] Users should do this at their own risk.

3815. Monitoring in NZ

>in terms of the regs...

You're looking at apples and oranges. Yes, present techniques won't
let us use 56kb on HF, but that's not the point. We *can* send 60WPM
error free through a 63 Hz bandwidth with presently realizable technique.
That's 2 to 3 times better than most Extras can achieve on CW. And,
we can do that using less power and under worse conditions than the
CW operator must have as well. More importantly, radio equipment
designed from scratch to be optimized for digital operation can be
of the same order of cost and apparent simplicity as the CW stations
used by those operators.

You ask how many people on this list could homebrew a 19.2 kbs
digital radio. My answer is about the same number who can master
13 WPM 70% error free Morse in the same study time. Actually,
I would expect most could master the technology in substantially
less time than was required for them to reach minimal Morse
competency. And for that effort, they gain about 2110 times
as much performance as they would have using Morse at that
level. Now if that isn't a good deal, I don't know what is.

This year the local scouts are going to help with setup, kitchen duties (cooking), and operating at our Field Day.

We have provided an amateur radio nov/tech class at winter camp which was a big success!

We link our 440 repeater to HF for the Jamboree on the Air and let the scouts at their various locations talk via HT. That works great by the way.

>of this... :-)) but an awful lot of technology (= expensive) is needed
>to make it that simple. Think of the complexity of a simple QRP CW rig.

One of the fasinating things about modern electronic technology is
that complexity very often leads to economy, IE today's more complex
electronics is *cheaper* than the simpler electronics of the past.
One can look at computers, TVs, VCRs, etc and see that as these
items have become functionally more complex and powerful, they have
also become less expensive, and with lower parts counts. I can remember
paying $800 for a 16k RAM board. Today, a single chip, holding more
RAM than that, includes a processor, some I/O, and costs only a few
dollars. TVs that once were crammed full of discrete parts now only
contain 3 or 4 chips, yet perform better than their older counterparts
(and cost less in constant dollars).

Amateurs who are content to stick to older ways often don't see those
cost savings, or the performance improvements that go along with
them. They just moan about the increasing price of their Yaecomwood
radios, which being built to exploit older modes can't take full
advantage of modern technology. A purpose built digital radio can
be deceptively simple, with most of the complexity hidden in a few
parts and firmware. It can be cheap to build, yet perform far beyond
anything implementing less efficient coding methods.

As example, how would you like a HF radio that can transmit and
receive error free data at 60 WPM, occupy only 63 Hz bandwidth,
operate worldwide on less than 1 watt of output power (propagation
permitting), and cost under $200. Such a radio exists, setup to
operate in the 10 meter amateur band, but most amateurs either
don't know about it, don't recognize it, or turn their backs on it
because it doesn't use the holy Morse Code.

Even better performance radios, with even lower costs, have been operated experimentally. Radios that permit data transfer at aural S/N ratios undetectable to the ear exist, and are very inexpensive to implement. Few amateurs use them, or even know about them, because they live on a mythos that says "CW gets through when nothing else will". That's not true today, and hasn't been true for decades.

When amateurs expound about the economies of CW, they neglect the real costs associated with offloading into wetware things done cheaper and better in hardware and firmware. Those costs are real and substantial in terms of performance, time, spectrum usage, dollars, and training manhours wasted. In the time required to condition wetware to do 13 WPM 70% error free, a person can learn all the necessary theory and techniques to implement a 60 WPM 100% error free communications channel that uses equipment with only slightly greater apparent complexity, and with as low, or lower, dollar costs of construction and operation than that which is required for CW transmission and reception.

Now, no doubt, lots of amateurs will take issue with what I've said above, but invariably that will be because they are unfamiliar with available technologies. They may think that digital weak signal work is "too complex" or "too expensive" because their only experience with it is from the vacuum tube days, or from passing looks at the horrid boxes called TNCs or multimode controllers. Those things don't begin to tap the power of digital radio, because they are horrid kludges designed to work through totally unsuitable analog radios designed originally for FM or SSB/CW operation. The paradigm that analog voice and CW radios are suitable and necessary for digital radio has held many back for a long time. The true power of digital can't be exploited without radios optimized from the beginning for digital. It turns out that such radios can have a very low apparent complexity, low actual costs, and rather startling performance.

Amateurs should be leading in exploiting these techniques, since the cost of entry is low, and the rewards many, but they aren't for the most part. Much of the reason for that is because amateurs are in the main stuck in an analog aural paradigm fostered in part by the over-emphasis on Morse Code in amateur training and testing. Amateurs, and amateur radio, would be better served if Morse Code were treated as just another mode of operating, albeit one of historical interest, that an amateur may choose to pursue, instead of it being treated as the sine qua non of amateur existance.

>I'm currently advancing the state of Mathematics. Amateur radio is
>only a hobby for me, not a profession (note the words amateur and
>professional are antonyms).

Professionals do things for money, IE mercenary reasons. Amateurs
do things purely for the intrinsic value of the task, driven by
their enthusiasm rather than the lure of money. That most emphatically
does not mean that amateurs must be less competent or less dedicated
to their chosen pursuits. It does not mean that amateurs should be
backward or retro in their techniques, or that their skills be mainly
of historical interest to the entire field in which they labor. In fact,
many of the breakthroughs that have occurred in many fields have been
accomplished by amateurs, doing things because they've puzzled out how
to do them simply because they wanted to know, rather than doing things
because they had a contract to fill and a deadline to meet. Professionals
are often stifled in what they can do because they first have to find
someone willing to pay them to do it. Amateurs face no such limitation.
They may do things simply because it piques their interest. That's a
powerful advantage and powerful freedom that professionals don't share.

>>I've built...
>>I do...
>>I've had...
>>... I co-designed.
>
>I I I I. If that's all you've done with your life, what a pity.
>If I started listing my lifelong accomplishments I'd surely use
>more than one paragraph.

Well being long winded isn't necessarily a virtue, but give it
a try. What *have* you accomplished to advance amateur radio. We
don't care about your mercenary professional accomplishments here.
Try, like Brian did, to list your amateur accomplishments. Lets
see how they compare.

>If you're profession happens to coincide with amateur radio then
>it's expected that you advance the SOTA. Mine doesn't. I'm trained

>in pure mathematics. Radios and computers are *just* a hobby for me.

What you do for money often has little bearing on what you
contribute to your chosen avocations. Some of the more significant
advances in amateur radio (and many other fields) have been done by
people with little formal background, and no mercenary interest, in
the field of their avocations.

However, there is little doubt that a formal background can sometimes
be helpful. Perhaps with your formal mathematical training you should
take a look at information theory and apply your mathematical skills
to discovering the relative advantages and disadvantages of coherent
coding versus incoherent coding. Just do it for it's own sake, not
because you're getting paid to do it. It might open your eyes. Then,
at the very least, when you choose to turn your back on superior
methods, at least you'll know you are making a suboptimal choice,
and you'll know that your continued advocacy of suboptimal choices
is a drag on your chosen avocation and detrimental to its advance.
Doing harm in the name of "fun" is never an admirable trait.

I have two cars with my call sign on them. (that throws people when they are parked side by side!) and have never had a break in. Nor have I heard of anyone in the Milwaukee area having a problem.

I did have one problem and this was at a club meeting. Someone stole my mag mounted 2mtr antenna and also poked a hole in another's gas tank. This was probably due to us being the active fox hunters trying to nail a frequent jammer to the club repeater.

So if you have any enemies on the frequencies, they can easily locate your car to do damage at a club meeting. They know you will not be out for a couple hours. Only way around that is to have a guard in the lot.

>for abuse of process.

We were advised that there was no remedy available for the suit we were slapped with. No, it wasn't expensive, but only because our lawyer was a ham from the area in which the suit was filed who agreed to represent us for actual costs, and it was incredibly time-consuming and a major hassle to deal with.

(Just in case you're wondering how I can comment on this, I was president of the Texas VHF-FM Society during the time this litigation was going on.)

>Furthermore, this is completely unrelated to what we were talking about.
>YOU said, or at least insinuated strongly, that it was grounds for a lawsuit
>if coordination was withdrawn for this or that repeater. Now you trot out
>some old frivolous lawsuit on an unrelated silly subject in order to prove
>your "point."

The person who filed the suit did so because we decoordinated his repeater. He made the suit be in relation to a newsletter article because he was told, I understand, that he'd have a better chance in court with that cause of action - but make no mistake, the real issue was his coordination. Now, I'm sure you're going to say that there's no relation, but answer me this: If not, then why did he make repeated offers to settle the case if we would simply coordinate his repeater?

>Kind of a lapse there, Mr. Reese. Let's stick to the topic of coordination,
>and not try to obfuscate by planting the seeds of completely groundless
>fears of litigation. Completely groundless.

Spoken like a lawyer trying to drum up business from careless folks.

The simple fact is that you're the one obfuscating here. We've been there, and we know what it was like. It's an experience that I do not think it would be in the best interests of the Texas VHF-FM Society - or any other coordination body - to repeat.

Once an old ham in our small town offered to teach me about ham radio.
This old gentleman was a house painter by trade and he lived and ate ham
radio every spare moment, when he wasn't out working his butt off.
I was wondering if any of the older hams out there remember Qso's with
w3pdp/Pappy (Leroy Lewis)? I guess he is about 84 years of age.
It saddened me see that Pappy's call just recently expired in May.
What happens to old Ham's calls. They should be retired like the jersey
of an NFL Q-back.
He loved his hobby and as he rests in a local nursing home I wonder if
he can, at times remember his QSO'S with all who shared his love for a
great hobby.
He doesn't remember this runny nosed little kid who was amazed with his
equipment shack and with his willingness to teach others.
I only recently acquired my ticket and I wish I had many years ago when
this nice old fellow wanted to elmer me.
Thanks for taking the time, Pappy. Your QSO's will be greatly missed by
many, I'm sure.....

> Brett - N7OLQ

Brett,
I disagree with your opinion that ads, even if directly aimed at Ham Radio,
scanning, or topics relating to this subject SHOULD BE ALLOWED on this net.
To open the door would be the same as opening Pandora's Box.
Even if at this point, the net doesn't carry all that it could, it still
covers subjective conversations between participants. To open the area to
ads would be to lessen what activity occurs now...and become one
"long-commercial". If you really want to see ads, pick up any number of
magazines that cater to the ham radio field. There are many you (and I) know of.
Use their 800 numbers, and call them. Write to them Snail-mail. You'll get
answers and -QUICKLY-!
If this net started touting 80K of messages a day, and 2K or less was of
actual human conversing, I believe a lot of SysOps would simply drop the net
due to inactivity on their own local levels. Maybe I'm wrong...but if I want
to read ads for radios, I look through QST or 73. If I want computer ads,
I'll pick up the Computer Shopper.

I have had call plates on my vehicles for 30 years and have not had any problems. As I travel a lot, it has led to many "on the road" friendships.

On the other hand, in some areas it might be an invitation to being a likely target for a breakin.

3836. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-28 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.uVeu6c1w165w@GRAFex.sbay.org>
Source record: 245730
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your

system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE
and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

That's a packet address, not an internet address.
You have to send your mail via packet back to that address along with
the internet address of the recipient. In the format requested by that
operator.

Gary

David,

I have had two radios (VHF) stolen. But whether or not it is due to the fact that I have a vanity plate is purely achedemic. True, one might argue that the vanity plate is an advertisement, however, the neighborhood in which they were stolen may suggest that the culprits were of below average intellegence and illiterate.

I doubt that they understood or even bothered 'reading' the plates, but got their clue from the antenna.

The first radio was recovered when the 'lowlife' tried selling it as a scanner. HA HA HA. What a scream.

My suggestion would be, use a slide mount (don't use the antenna or power connections) so removal can be easy when you leave it at night. Also, lock your car. One would think after losing two rigs, I would learn. RIGHT!

Ray

Source record: 245638

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: It seems the TVFS editor had bad legal advice. Our lawyer says never
: editorialize in public about specific actions toward individuals.
: As long as you stick to publishing general policy statements, you
: give no grounds for a slander suit. (Publishing the truth is also
: a defense, but the truth is often a mallable thing, subject to
: interpretation, and is more risky.) Publishing is a risky business
: in any event, and any group that decides to publish has to either
: be very careful, or have a legal staff ready to defend them,
: preferably both. And a liability insurance policy should be
: mandatory in these cases to protect the group against large
: legal bills and settlements.

I wrote the article that was the catalysis for the suit. I was sued along with the Texas VHF-FM Society. No names were mentioned in my article and the references were (I believed) vague enough so that anyone not directly involved would not know who was involved. It was essentially a news article about what was going on in Texas coordination. The article merely mentioned the FCC citation of an uncoordinated repeater interferring with a coordinated repeater. The citation existed (we had a copy of it), the facts were undenyable. The interesting thing was that the FCC citation was not directed against the guy who sued us (that is, he was not the trustee of the repeater in question).

Despite of what Mr. Buffington says in one of his replies, however, this lawsuit was directly about frequency coordination. Of that there is no question.

Gary, I hope you are right about tort reform. But even the threat of a lawsuit is enough to make most folks blood run cold. I have heard more than one of our directors say that the hobby was not worth being involved in a lawsuit.

Jerk the coordination of someone with a lot of money to burn (anywhere, Mr. Buffington, even someone who runs a closed repeater in southern California) and you may get to test the old adage "he who has the most attorneys wins."

Any frequency coordination body that discriminates against closed repeaters in any manner is walking a tightrope. No FCC rules having to do with Amateur Radio suggest that closed repeaters are frowned upon on in any manner. In fact, the FCC rules specifically state that closed repeaters are allowed; they don't say that open repeaters are allowed. I think that is a fairly clear statement about how the FCC feels about repeaters: they would rather that they WERE closed.

Recently, in another southern California action, the FCC clearly told a two meter group that they (and any other repeater trustee) ALWAYS had the right to exclude specific operators on their system. In fact, they implied that it was the RESPONSIBILITY of a trustee to know the users on his or her system. This is another clear indication of how the FCC feels.

There has never been any indication from the FCC that open repeaters were in any way favored over closed systems. The amateur radio spectrum may be open for all licensed Amateur Radio Operators to use, but the equipment in a repeater station is not. The trustee in EVERY case is in control. From that aspect, all repeaters are closed.

ANNOUNCING A NEW ERA IN DUAL BAND HANDHELDS!!!

THE NEW ALINCO DJ-G5T

VHF/UHF Dual Band FM Handheld Transceiver
(still awaiting FCC approval)

Here is a list of some of the major features

V/V or U/U
Built in CTCSS Tone Encoder and Decoder (50 Tones)
A/B 2 VFO's
80 Memory channels plus call channel for each band, plus 3 program scan memory
Memory Channel Skip
Independant VHF/UHF TX/RX LED
Selectable RF ATTENUATOR (VERY VERY VERY HANDY!!!)
Bell Function, DSQ Function, Priority Function (VFO, Memory, Call, Priority)
Memory Shift (Transfer memory content into VFO)
Mono Band Operation
Cross Band Repeater Function
Memory Reset / VFO Reset / All Reset
Channel Scope w/ 2 5 channel scope or 1 11 channel scope w/ 5 levels
TOT (Time Out Timer)
Auto Dialer (up to 20 memories)
APO (Automatic Power Off)
Key Lock
Band Scan, Programmed Scan or Memory Scan
Airband Receive Standard (No modification necessary)
Expanded UHF TX frequencies (438.000 - 449.995MHz before Modification)
Tone Burst Function
Switchable DTMF Delay, DTMF duration
Direct Frequency Entry from the keypad
Low Battery Indicator
Cloning function

SPECIFICATIONS:

GENERAL: Frequency coverage:
Receiver:
VHF: Left Side: 108.000 - 173.995 MHz (AM,FM)
Right Side: 130.000 - 173.995 MHz (FM)
UHF: Both Sides: 420.000 - 470.000 MHz (FM)
Transmitter:
VHF: Both Sides: 144.000 - 147.995 MHz (FM)
UHF: Both Sides: 438.000 - 449.995 MHz (FM)
Operation Mode: F2E, F3E (FM), A3E (AM) Receive only

Channel Steps: 5, 10, 12.5, 15, 20, 25, 30, 50 KHz
Operating Temperature: -10C - +60C (-14F - +140F)
Frequency Stability: +/- 5ppm
Antenna Impedance: 50 ohms unbalanced
Power Requirement: 4.5V - 16V DC
Number of memory: 80ch each + 20 autodial memory
Current Drain:
VHF UHF
Transmit: (H: 13.8V) Approx 1.4A Approx 1.5A
(H: 9.6V) Approx 1.4A Approx 1.5A
(H: 7.2V) Approx 1.4A Approx 1.5A
(H: 4.8V) Approx 1.0A Approx 1.2A
(Medium) Approx 0.8A
(Low) Approx 0.5A
Receive: Twin band mode: Approx 85mA
Single band mode: Approx 50mA
Battery save mode: Approx 35mA
Dimensions: 57(W) x 139(H) x 28 (D) (mm) (Extrusion not incl.)
Weight: Approx 350g

Transmitter:
Power Output
VHF UHF
Transmit: (H: 13.8V) Approx 5.0W Approx 5.0W
(H: 9.6V) Approx 4.5W Approx 4.5W
(H: 7.2V) Approx 3.5W Approx 3.0W
(H: 4.8V) Approx 1.5W Approx 1.0W
(Medium) Approx 1.0A
(Low) Approx 0.3W
Modulation system: Variable reactance
Spurious emmissions: Less than -60dB below carrier level
Maximum deviation: ± 5KHz
Microphone Impedance: 2K ohms

Receiver:
Receive circuitry: Double Conversion Super Heterodyne
IF frequencies: 1st: Left side: 39.8MHz / Right side 45.1MHz
2nd: 455 KHz
Sensitivity: (within ham bands)
Left side VHF: better than -16dBu
Left side UHF: better than -12dBu
Right side VHF: better than -12dBu
Right side UHF: better than -15dBu

Selectivity: more than 12KHz (at -6dB)
less than 30KHz (at -20dB)
Speaker Impedance: 8 ohms
Speaker Output: more than 100 mW (at 10% THD, 8 ohm)

Hope y'all find this interesting...
This is actual information from Alinco USA

Note: Audio output is only 100 mw. This is not up to the standads
of alinco's previous radios such as the DJ-580T and the DJ-582T.
I believe this radio is designed to be used similar to that of
a cellular phone.

AN::CB linear amplifer and then to my TV antenna. Can somebody tell me how to
AN::do this. I hve a flat wire going from my TV to the antenna. Do I use the
AN::same kind of wire to go from my HXT to the linear.

AN::Also the guy at Rad Shack said he put some repeater chanels into my
AN::radio. Can someboby please tell me what a repeater is and what it does.

AN::Also can I use my cb handle or do i have to makeup another one. The guy
AN::at rad shack said to just makeup a call sine.

AN::Also when I get my linear and TV antena hooked up will I be able to talk
AN::to and hear people in other countries and if so on what chanel. My Rad Shac
AN::HXT
AN::has 20 chanels I think. Which one do I use to talk to somebody in another
AN::country.

AN::Also what chanel do the other truckers hangout on. I tried all 20 chanels
AN::and cant find them. I even tried chanel 19 but there was no one there.

AN::Thankyou for all of the help. I hope to talk to all of you on the air.

AN::Keep the rubber side down. Catch you on the flip side.

WB::>like CB but I can talk alot farther. I wanna hook my Rad Shack HXT to my
WB::>CB linear amplifer and then to my TV antenna.

WB::The easiest way to do this is as follows:

WB::1. Leave a CB transceiver hooked to the amplifier's "Transmitter" connecto
WB::in order to provide a 50 ohm load and prevent oscillation.

WB::2. Connect the "Antenna" connector of the amplifier to the "Antenna" conne
WB::of the HXT202.

WB::3. To test, Key the mike on the CB transceiver and the Push-to-Talk button
WB::the HXT202 simulatneously. You should now be able to hear audio from the C
WB::transceiver on your new rig, indicating that everything is working OK.

WB::4. You're ready to go!

WB::Jack WB3U

Wd4cap <wd4cap@aol.com> writes:

>One point that is often misunderstand when discussing what managers and
>sales clerks are paid by Radio Shack, or most any retailer for that
>matter, is that they are not in business to provide good paying jobs.
>They are in business to produce profits and pay shareholders. They don't
>want to pay extra for experienced and intelligent 'technical' people.
>Rather, they want to hire the least expensive individuals they can to open
>the store in the morning, show customers where the stock is, take the
>money, and lock up at night. If they can hire someone that knows
>something about electronics and business at the rates they pay, so much
>the better for them and the customer but that is *not* their business goal

Well, that's true but not completely. I've seen internal Tandy letters
that address the turnover problem. They are willing (up to a ont, whoops
I meant point) to admit their pay plan needs work. They did institute a
slight change that rewards completing some training and longevity, but it
still is pretty pitiful and they cut the part-timers' pay to do it!

>If Radio Shack purposely excluded individuals with technical background I
>guarantee their sales would not suffer much, if at all. I can think of no
>other major retail chain selling electronics (though not exclusively)
>that has a reputation for hiring people that know their products. On the
>other hand if Radio Shack made it policy to hire only people with some
>sense and technical experience, particularly with the product line, the
>consumer wouldn't really know the difference and most of the time wouldn't
>care. R.S. would have to pay higher wages to find and keep those reps

I disagree. Of course, this might be true in some parts of the country,
but it definitely is not true here. The few RS people here who know
anthing make a lot of xxx (gotta fix this keyboard!!!)
Anyway, the few RS people here who know their stuff make a lot more money
than the rest of them. If RS hired *good* people and paid the appropriate
wage, I'd bet their sales would go up enough to justify it.

>I worked as a service manager for an independent consumer electronics
>retailer many years ago. I observed that the less the customer thought
>you knew, the more comfortable they were (we're talking the *majority* of
>customers here, not all). I think it has to do with feelings of
>inferiority around a 'know-it-all' sales clerk. Granted, a few customers
>will be angered if you don't have the technical answer they need, but most
>don't care. There are many customers that like to believe they know more
>than the clerk (and sometimes they really do know more). There was one

I've seen this in action and can relate...however, I think a lot of it
is how the salesperson hadnles the situation. A little skillful PR and

customer courtesy goes a long way towards making the customer feel comfortable, regardless of how little (or much) he or she knows.

I have heard that some guys out there are experimenting with very low
frequency (as low as 5 Hz), does anyone have info on that ?

I even heard that is this very low frequency transmission works out,
it is going to be used on U.S. submarine, really ? Brief me please.

>Unusual or not, it is an entirely inappropriate way to run a coordination
>group, and any group that is run this way should not be recognized as a
>coordination group.

I made no judgement as to tha appropriateness of this form of organization, I only mentioned that it was not unusual in the US for coordination organizations to be organized this way.

I believe the issue is whether SCRRBA does frequency coordination or whether they do spectrum management. These are two different, but related things. If SCRRBA's only objective is frequency coordination, they can concern themselves with minimizing interference between radio systems. This is a purely technical pursuit. Spectrum management, on the other hand tries to maximize the spectrum usage for the collective good. This is almost entirely political in nature. It is possible that SCRRBA is a good frequency coordinator, but a poor spectrum manager.

>So what if some old fossil decides to file an
>unrelated lawsuit about some newsletter? Big deal.

This lawsuit was a direct result of a coordination action I took as 2 meter frequency coordinator in Dallas. Since he couldn't find anything else to sue us over, he sued for slander.

>And it isn't very
>expensive to defend against a lawsuit like that.

..If you think time is valuless... but the fact is the guy accomplished his objective. He stopped the FM Society from doing anything for two years.

>You should have been able to get the guy
>for abuse of process.

It wasn't worth the trouble. This is a hobby.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 860 28th May 1995

ARLX023
EMF cancer link studied

The Council of the American Physical Society (APS) has issued the results of a study entitled ''Power Line Fields and Public Health", concerning the potential dangers of cancer from electromagnetic fields that emanate from common power lines and electrical appliances.

The APS concluded that ''the scientific literature and the reports of reviews by other panels show no consistent, significant link between cancer and power line fields'' and '' the preponderance of ... research findings have failed to substantiate those studies which have reported specific adverse health effects from exposure to such fields.

''While it is impossible to prove that no deleterious health effects occur from exposure to any environmental factor, it is necessary to demonstrate a consistent, significant, and causal relationship before one can conclude that such effects do occur. From this standpoint, the conjectures relating cancer to power line fields have not been scientifically substant-iated.''

The APS said that billions of dollars are being spent by states and municipalities to mitigate and litigate this perceived problem and ''the burden of cost placed on the American public is incommensurate with the risk, if any.''

A background report on this issue by David Hafemeister is available on the Internet through the APS World Wide Web HomePage at: http://aps.org

ANARTS WW RTTY/Digital DX Contest 10-11 JUNE Part 2

Contest period: from 0000Z Saturday to 0000Z Monday (48 hours)

Logs; Separate logsheets are required for each band. Logs must show: BAND, DATE and TIME (UTC), CALLSIGN, MESSAGE sent and received, NEW MULTIPLIERS and QSO POINTS. Summary sheet must

show: your callsign, name and address of operator, bands used, ponts claimed for each band, number of VK stations QSOed, total points claimed, and signature/s. Multi-op stations must contain the signatures and callsigns of each operator.

Logsheeets, summary sheets, multiplier and dupe sheets, EXCHANGE POINTS TABLE, and Band Use Chart for recording ON/OFF are all available for copying from the RTTY Contesters Guide, published by the RTTY Journal.

Logs must be received by the Contest Committee by September 1, 1995.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(19 MAY - 25 MAY)

ISSUED ON 26 MAY 1995

1. SUMMARY

Date 19 20 21 22 23 24 25
10cm 86 81 75 71 69 67 67
A 11 13 7 7 15 20 (10)
T 26 16 4 16 19 24 10

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET TO UNSETTLED ON 19TH MAY, QUIET TO ACTIVE ON 20TH, QUIET 21ST TO 22ND, QUIET TO ACTIVE ON 23RD, UNSTTLED TO ACTIVE 24TH TO 25TH WITH A BRIEF MINOR STORM PERIOD ON 24TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES, EXCEPT FOR NIGHTTIME ENHANCEMENTS OF UP TO 30 PER CENT ON 19TH, AND 15 PER CENT DEPRESSIONS ON 21ST MAY. SPREAD F WAS OBSERVED ON 24TH AND 25TH MAY.

2. FORECAST (26 MAY - 01 JUNE)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED UNTIL 29 MAY, ACTIVE TO MINOR STORM LEVELS EXPECTED THEREAFTER.

IONOSPHERIC: DEGRADED HF COMMUNICATIONS ON 30 MAY TO JUNE, NEAR NORMAL OTHERWISE.

DX Bulletin 28 ARLD028

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Jose, CT1ENQ, Joe, NJ1Q, Martti, OH2BH, Leo, JI1DLZ, Jim, JR2BNF, Randy, K0EU, and Contest Corral from QST. Thanks to all.

PRATAS ISLAND. A large group of ops will commence operations on May 25. On CW try 1827, 3504, 7004, 10134, 14024, 18074, 21024, 24894 and 28024 kHz. Listen for their SSB on 1827, 3555, 7045, 7065, 14195, 18125, 21295, 24945 and 28495 kHz. RTTY should be on 7082, 14082 and 21082 kHz. Some 6 meter and satellite operating is possible. Pratas Island is IOTA AS-110. QSL via KU9C.

VIETNAM, 3W. Warren, KF7AY, and other members of the Central Arizona DX Association hope to get on the air from Vietnam around October 12 or 13.

CAMBODIA, XU. Hungarian Embassy worker Sanyi, XU95HA, will leave Cambodia on June 10 or 12. Sanyi will be active everyday until departure and plans to be in the CQ WW WPX CW Contest.

ERITREA, E31. Jin, JF1IST, will be in Eritrea May 27 to June 11 on UN related activity. He plans to operate all HF bands, 50 MHz and OSCAR 10 and 13, though this is not a classic DXpedition.

SRI LANKA, 4S. 4S7/JA4FM is active on the low bands. Check 7045 kHz between 1600 and 1700z, then 3795 to 3799 kHz or 1909 kHz simplex calling CQ.

FIJI, 3D2. Steve, AA6LF, and Bob, N6EK, will sign 3D2LF and 3D2EK respectively, for two weeks starting May 29. They hope to activate the Mamanuca Group, OC-121, and the Yasawa Group, OC-156, for IOTA chasers. Listen for their CW 5 kHz up from the band edge. For SSB try 7058, 14260 and 21260 kHz. QSL 3D2LF via AA6BB. QSL 3D2EK via N6EK.

MALAWI, 7Q. A European Satellite DX Fund sponsored DXpedition will run May 26 to June 4 by Arie, PA3DUU, with activity on OSCAR 10 and 13. The only HF will be on RTTY. QSL via PA3DUU. Please include sufficient postage.

ZAIRE, 9Q. Alex, PA3DZN, aka 9X5EE, is now active as 9Q2L. Check 14025 kHz from 2100 to 2330z.

CAPE VERDE, D4. Geoff, GJ4ICD, will start his 6 meter effort around June 1 from the QTH of D44BC. Listen for D44BC on 6 meters as well as 28885 kHz.

VATICAN, HV. Paolo, I2UIY, hopes to be in the CQ WW WPX CW Contest signing HV4NAC. QSL via IK0FVC.

SVALBARD, JW. JW2FL will be on the air from Bear Island, IOTA EU-027, starting around the end of May, mostly on 20 meters.

JUAN FERNANDEZ ISLAND, CE0. Bob, K4UEE, and Randy, K0EU, are planning a DXpedition slated for a week in September 1995.

MONACO, 3A. Luc, I1YRL, will be on all bands and modes June 10 and 11, 24 and 25, and sometime in September. He will sign 3A/I1YRL. QSL via CBA.

ALASKA, KL0. Lanny, W5BOS, will operate from the Popof Islands, IOTA NA-087, in the Shumagin Island Group, from 2200z July 12 to 2300z July 15. Listen for his SSB and CW and the call sign W5BOS/KL0. QSL via W5BOS.

CUBA, CO0. A group including CO2QQ, CO6CG, CO7KR, CT1EEB, CT1ESO, EA5BYP, EA5YN, I8IYW and I0SNY will activate Sabana Archipelago May 25 to 29. Listen for CO0OTA. This will be a new one for IOTA. They will be on all bands and modes, including satellite operations. VHF activity will be on 50, 144 and 432 MHz for the benefit of grid square hunters. QSL via CT1ESO, Luis Gomes, PO Box 207, 8900 Vila Real de Santo Antonio, Portugal.

QSL NOTES. CT1CJJ is handling cards for the 4L5O operation of 1995. QSL 4L5O via Omari Odoshashvili, PO Box 101, 61000-Trabzon, Turkey.

The Venezuelan Independence Day Contest on SSB starts at 0000z July 1 to 2400z July 2. Exchange signal report and serial number starting with 001. Work all stations, not just YV, YW, YX, YY or 4M.

Divisional elections

DIVISIONAL ELECTION

At 4:30 pm yesterday afternoon, 27th May 1995, the annual report, notification of the Annual General Meeting and the ballot papers were posted to all financial members. These should start appearing in your letter boxes over the next few days. Letters to overseas members will be posted on Monday.

Short wave listeners, members who do not presently hold a amateur certificate of proficiency are not entitled to vote in the ballot for the council, and so will not receive ballot papers in their posting.

Peter O'Connell VK2EMU
Divisional Returning Officer
27th May 1995

WIA meeting with SMA

WIA meeting with the SMA

On Thursday, 18 May, the WIA's SMA Liaison Team met with the SMA in Canberra. There were eight major subjects on the agenda. These were:

* New Technical Licence Specifications and Regulations

* Special conditions on Repeater Licence Renewals

* Action on the 80 metre DX window

* Exam Service Memorandum of Understanding

* Club Station Operations

* Callsigns

* SMA Information Paper

* Connection of Amateur Stations to the Telephone Network

The members of the WIA SMA Liaison team who attended the Canberra meeting were: Federal President, Neil Penfold VK6NE, Federal Vice Chairman, Roger Harrison VK2ZRH, Federal Coordinator International Study groups, David Wardlaw VK2ADW, New South Wales Division President, Michael Corbin VK2YC, and South Australian Division

Federal Councillor, Bob Allan VK3BJA.

Only brief comment on most of these topics can be offerred at present, but more information will be available during the month of June after the minutes of the meeting have been finalised and further and information which the SMA has agreed to provide becomes available to us.

Special Conditions on repeater Licence Renewals

A number of repeater licensees have received renewals which have special conditions detailed on the licence, particularly with regard to interference.

This reflects conditions which have existed up to now, but have not been attached to licences in the past.

However, the new Technical Licence Specifications for repeaters, due to be completed soon, will supersede these conditions. It is anticipated conditions regarding the operation of beacons and repeaters on a non-interference/no protection from interference basis, as has existed to now, will be watered down.

80m DX Window

This matter was raised to get a progress report. The WIA Victorian Division has taken on the task of writing to primary users on the band adjacent to the 80m DX window, above and below 3800 kHz, to ascertain possibel willingness to share. This action is still under way.

The SMA has been monitoring the band and issuing infringment notices to amateurs allegedly breaching their licence conditions.

Exam Service Memorandum of Understanding

The agreement between the SMA and the WIA, under which the WIA Exam Service operates, is still being revised.

It is expected provisions under which exams are to be conducted in remote areas will be eased.

Club Station Operations

Conditions applying to the operation of Club stations have long been a bone of contention.

The WIA has sought an easing of the requirement to maintain a full log book and to notify portable operation away from the Club licence's address.

The WIA is awaiting a reply from the SMA on this matter.

Callsigns

This is a complex set of issues. The issues discussed included callsigns for amateurs visiting from overseas, new callsign blocks, the "portablility" of callsigns - retaining and using your old callsign when you move interstate (for example), suspending deceased amateurs' callsigns from reissue for a period and the possible issuing of single-suffix callsigns, such as VK1A, VK2Z, etc.

As there are lengthy issues and explanations necessary on this issue, and further information is to come from the SMA, more details will have to wait for a later release.

SMA Information Paper

The SMA is releasing an information paper on the new licence conditions and Regulations. Its contents were discussed.

It is expected the Information Paper will be relased at the same time the new Technical Licence Specifications and Regulations are released.

Connection of Amateur Stations to the Telephone Network

While voice "phone patch" has been permitted for some years, the connection of packet stations to the Public Switched Telephone Network (PSTN) is forbidden under the Regulations.

The WIA has asked the SMA to provide reasons and is seeking the relaxation of this requirement.

Family membership

FAMILY MEMBERSHIP

The recent Federal Convention adopted a policy regarding a Family Membership grade which would allow households having three or more amateurs in the family to obtain membership of their Division at a considerable discount.

The Tasmanian Division first proposed that the Family Membership be looked into at the 1994 Federal Convention. The NZART has a Family Membership option.

There are a number of options available under which households could apply for Family Membership, but a general discount of 25% would apply. The principle behind it is that there would be a 'cap' on the total amount of membership subscription from the one household, the total amount being decided by the individual Divisions. As Divisions have differing membership subscription rates, the maximum payable will vary from Division to Division. There would be only one copy of Amateur Radio magazine sent to each Family memmbership household.

For a three-amateur household applying for Family Membership, one option is for one Full grade membership, one X-grade membership

and one Student membership. Or, it might be a combination of two G-grade (concessional) memberships and one Student, for example. Households with more than three amateurs (or, say, three amateurs and an interested SWL), only the international and national representation components of a membership subscription may be charged ($2.90 at present) for each additional member.

As an example (only), a household applying to the VK3, VK4 or VK5 Divisions, where three amateurs might want one Full, one X-grade and one Student membership, the present total amount would come to $174. The proposed capped Family Membership, with the 25% discount, would only have to pay $130.50, a saving of $43.50.

As a general rule, the policy is that a household applying for Family Membership must all have the same surname (but allowing for de-facto and special exceptions), they must live at the same address and only one copy of AR is sent by the household. Further information may be obtained from your Division, NOT from the Federal Office.

VK2 WICEN News

VK2 WICEN News

Following last week's announcement that Federal WICEN have set up a Web page for the benefit of Internet users, we would like to announce that a similar page for New South Wales will soon become available. Permission has been granted by the employer of a WICEN member to establish the page, which will carry the latest news and events, and other items likely to be of interest to WICEN (NSW) personnel. Full details will be announced when the page has been established (and when the Internet firewall has been re-programmed).

Those members who have not yet renewed must do so by 30th June, if they wish to remain a member. For just $10 (plus a joining fee) you can be a member of the only Amateur Radio organisation accredited by the State Government to take part in a disaster situation.

May is almost at an end, and members are reminded that the closing date for the Newsletter is this Wednesday; similarly, the closing date for the Annual Reports is also Wednesday.

Next month will be active, with the Watagan Mountains Horse Enduro on the weekend of 10th-11th June, conducted by the eponymous Dan VK2GG, and at least three events on Sunday 25th June -- the Waratah 100 Horse Enduro run by Andy VK2XRX, the Lake Macquarie Half Marathon run by Steve VK2KBL, and the tentative Elouera Half- and Mini-Marathons.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123,

St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on repeater 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, Central Coast each Thursday at 8.30pm on t Hunter repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Bits and Bytes

Bits and Bytes

Here again we take another irregular and irreverent look at the high-tech industries, and the computer industry in particular.

Users of "Windows 95" (which for a while looked as though it would be called "Windows 2000") may be familiar with the fact that their software "phones home" as part of the registration procedure -- as an aside we hope that your credit card number is encrypted in some way -- but you may not be aware that it has compiled a list of ALL software on your machine, whether Microsoft's or not (and presumably whether it has been registered or not). Is Big Brother Bill watching you?

Looking at other Microsoft offerings, we now know what sort of a market at which "Bob", a "user friendly" front end to Windows (we thought that Windows itself was meant to be user friendly, whatever that term means), is aimed; it seems it now has the concept of passwords, but if a user forgets their password, they merely have to enter a new one after mis-typing the old one three times. Obviously, security was not high on their priority list...

Meanwhile, over at Intel (the company that brought you the defective Pentium known as the "Approximator", it seems that chip designations are no longer a guide to performance; for example, a high-end "486" will easily outstrip a low-end Pentium. Also, it appears that some listeners could be confused by the difference between a "DX/33" and the new "DX/2-66 Overdrive" chips that are now appearing on the market. It seems that the only difference between them is the packaging; the former are sent to dealers, and the latter (complete with instructions and fancy packaging) are sent to end-users. Several dealers report shipping one chip for the other, when out of stock.

Furthermore, just when you have worked out what a "DX/2-66" really is (a clock-doubled 33MHz chip) Intel throws a spanner into the works with the release of the "DX/4-100". No, this is not a clock-quadrupled 25MHz, as could be implied, but either a doubled 50MHz or a tripled 33MHz chip; we assume they used a Pentium to assign these labels.

Be listening next time for another critical look at the industry giants.

-- Dave VK2KFU

News briefs

NEWS BRIEFS

EMF CANCER LINK STUDIED

The Council of the American Physical Society (APS) has issued the results of a study entitled "Power Line Fields and Public Health," concerning the potential dangers of cancer from electromagnetic fields that emanate from common power lines and electrical appliances.

The APS concluded that "the scientific literature and the reports of reviews by other panels show no consistent, significant link between cancer and power line fields" and "the preponderance of research findings have failed to substantiate those studies which have reported specific adverse health effects from exposure to such fields.

"While it is impossible to prove that no deleterious health effects occur from exposure to any environmental factor, it is necessary to demonstrate a consistent, significant, and causal relationship before one can conclude that such effects do occur. From this standpoint, the conjectures relating cancer to power line fields have not been scientifically substantiated."

The APS said that billions of dollars are being spent by states and municipalities to mitigate and litigate this perceived problem and "the burden of cost placed on the American public is incommensurate with the risk, if any."

A background report on this issue by David Hafemeister is available on the Internet through the APS World Wide Web HomePage at: http://aps.org

SYDNEY LANDMARK RETURNS

Listeners may remember that the AWA Tower was dismantled a year ago for renovation. Last Saturday, the tower was returned to its city home atop Wireless House in York Street, Sydney.

The 48 metre high tower, built in 1939, was once the tallest structure in Sydney; during Word War II, it was the last thing departing soldiers saw as they left Sydney Harbour. On VE (Victory in Europe) Day, the tower, illuminated by a 1.5 million candle-power beacon, featured on the front page of the Sydney Morning Herald, with the caption "The Lights Go On Again". After the war,

the tower was used by radio station 2CH, which was then owned by AWA.

The restored, gleaming white, AWA tower is a sight to behold; next time you're in York Street, have a look and wonder what it would be like to have it in your back yard...

from Richard VK2SKY ---

IPS Report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(19 MAY - 25 MAY)

ISSUED ON 26 MAY 1995

1. SUMMARY

Date 19 20 21 22 23 24 25
10cm 86 81 75 71 69 67 67
A 11 13 7 7 15 20 (10)
T 26 16 4 16 19 24 10

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET TO UNSETTLED ON 19TH MAY, QUIET TO ACTIVE ON 20TH, QUIET 21ST TO 22ND, QUIET TO ACTIVE ON 23RD, UNSETTLED TO ACTIVE 24TH TO 25TH WITH A BRIEF MINOR STORM PERIOD ON 24TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES, EXCEPT FOR NIGHTTIME ENHANCEMENTS OF UP TO 30 PER CENT ON 19TH, AND 15 PER CENT DEPRESSIONS ON 21ST MAY.

SPREAD F WAS OBSERVED ON 24TH AND 25TH MAY.

FORECAST (26 MAY - 01 JUNE)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED UNTIL 29 MAY, ACTIVE TO MINOR STORM LEVELS EXPECTED THEREAFTER.

IONOSPHERIC: DEGRADED HF COMMUNICATIONS ON 30 MAY TO 1 JUNE. NEAR NORMAL OTHERWISE.

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Illawarra

The Illawarra Amateur Radio Society advises all listeners their next meeting on the 13th June will be a mini auction of shop-soiled stock. There will be radio controlled cars, walkmans, power

boards, etc. All stock will have low reserves. The auction will start at around 2000 so bring your money with you. See you there!

--Brian VK2UBF for Illawarra Amateur Radio Society

Club News: Manly-Warringah member

Readers of the Sydney Morning Herald might have noticed a mention in "Column 8" of tandem bicyclist Yves Bernier, who broke his leg when he crashed during his morning commute across the Harbour Bridge. Yves, whose callsign is VK2AUJ, is currently recovering from his injuries, and should be "back on the road" before too long. Thankfully, Yves' partner Connie VK2CON got off at North Sydney and wasn't involved in the accident.

We wish Yves a full and speedy recovery!

--Richard VK2SKY, Manly-Warringah Radio Society Publicity Officer

Club news: Summerland

Summerland Amateur radio Club

The most successful SUMMERLAND COMPUTER EXPO was held on Saturday 27th May in the Lismore City Hall.

Sponsored by the Summerland Amateur Radio Club this was the third and best Expo held so far with over one thousand people inspecting displays by 20 exhibitors. Most exhibitors were local but ranged from Grafton to Brisbane.

The latest computer developments were presented including Internet connection via Nornet by Southern Cross University, mobile phone facilities and Windows 95 by other exhibitors.

Hardware, software, re-inking supplies and technical books were also available.

Fifteen Lucky Door Prizes, donated by Exhibitors, were won by visitors during the day.

The Exhibitors reported a very good day and will present the latest advances at the next Expo in November. Over twenty Club members, family and friends were involved in running the Expo which is held twice a year.

For Summerland Amateur Radio Club
J.W.Alcom

Club news: AAPRA

Australia Amateur Packet Radio Association

AAPRA is looking forward to welcoming new operators to the packet mode when the new Regulations are gazetted.

As a matter of policy AAPRA does not operate Bulletin Boards, so we are not responsible for the congestion on the 2 metre band which results from their activities. However it is pleasing to record that some Sysops are kind enough to do their onforwarding on UHF or 6 metres. For example VK2OP and VK2AAB in Sydney have agreed to use UHF. If more Sysops did the same users would be very grateful and the Bulletin Boards would actually be useable.

But newcomers have more immediate problems in starting out on packet and AAPRA exists to help with advice - and who knows what else - where we can. To contact AAPRA write to:

AAPRA
59 Westbrook Ave
Wahroonga 2076

or phone (02) 489-4393

de Geoff VK2BQ Publicity Officer

Club news: RAOTC

Radio Amateurs Old Timers Club

Members and friends of the Radio Amateurs Old Timers Club are reminded that the next series of broadcasts and call backs will take place on Monday 5 June.

Times and frequencies will be as follows:

10 AM. MELBOURNE TIME (2400 ZULU)
145.700 MegaHertz FM
AND
7.060 Megahertz LSB
3.650 MegaHertz LSB

11 AM. MELBOURNE TIME (0100 HOURS ZULU)
14.150 MegaHertz USB beaming NORTH
from Melbourne

12 NOON MELBOURNE TIME (0200 HOURS ZULU)
14.150 MegaHertz USB beaming WEST
from Melbourne

8.30 PM MELBOURNE TIME (1030 HOURS ZULU)
3.650 MegaHertz For the benefit of members
of friends who, for whatever
reason are unable to hear any
of the morning transmissions.

Callbacks will follow all six transmissions.
News for inclusion in the club broadcasts will be welcomed by Club Secretary Arthur Evans VK3VQ or Allan Doble VK3AMD both of whom are OK in any call book.

Club news: BMARC

The Blue Mountains Amateur Radio Club is holding its bi-annual Trash & Treasure sale on Friday, 2nd June, 1995 at Springwood High School, corner of Grose Road & Chapman Parade, Faulconbridge.

This event commences at 8.00pm with a short business meeting followed by the Trash & Treasure sale. Vendors please arrive by 7.30pm.

The usual tea and scones will be served. All are welcome. Be there!

Alex, VK2ICL
Publicity Officer
B.M.A.R.C.

Club news: Orange

The Orange and District Amateur Radio Club, at their May meeting, had the pleasure of hosting Divisional President Mike Corbin VK2YC and Cesar Mirands VK2TCM. A better-than-usual attendance appreciated their frank talks and enjoyed socialising with Mike and Cesar afterwards after supper.

The Orange Club's June meeting next Friday, June the second, has a most interesting agenda.

Item one is discussion on the recent closure of the Bathurst Amateur Radio Club and the consequences for the Orange Club.

Item two is a computer networking talk by Gerald VK2BFR who recently installed a Novell system at Forbes.

Item three is a tour of the network control centre of the NSW Department of Agriculture's very large state-wide computer network, at their head office in Orange. Vicki VK2EVM who is responsible for the Department's maintenance, will be in charge of the tour.

Visitors are welcome as always and members are asked to bring family and friends who are interested, to this meeting at 7.30pm next Friday the second of June, in the warm meeting room of the Cultural centre, Sale Street Orange.

from Peter Carter VK2ETK, Club President

Club news: Liverpool

The Liverpool and Districts Amateur Radio Club Inc. holds their next meeting on Wednesday 14th of June at 7:30pm.

Guest speaker will be Wayne Simpson VK2WJS on the topic of Power Supplies, the homebuilt variety. A topic near and dear to everyone's shacks!

The meeting will be held at the Scout Camp, Cambridge Avenue, Glenfield.

See you there

Brad VK2QQ
Publicity Officer

I am new to ham radio, so new in fact that I haven't even bought any radios yet. I'm wondering if someone could help me out and tell me from where in the U.S. can you buy good, low-priced ham equipment, mainly radios? Also, do you know a number I could call to get a catalog of ALL ham radios manufactured by Kenwood & Icom? Thanks alot for any help.

FWIW: I had a car stolen and stripped, they took the stereo, the CB, and the radar detector. They left behind a 2-meter mounted right next to the CB radio and an HT that was laying on the seat. They took the spare tire and a pair of jumper cables from the trunk, plus some other non-descript stuff.

This time the culprits were caught, not that I recovered anything since they were Juveniles, but did have the oportunity to ask why they didn't take the ham gear. One thought it was police radios and the other said that he heard that kind of stuff automatically transmitted its location. So they were actually scared to touch it.

They did not damage the car, wish I could say the same for the Police who did over 90% of the damage to the vehicle before I got it back.

Gary

>I'm currently advancing the state of Mathematics. Amateur radio is
>only a hobby for me, not a profession (note the words amateur and
>professional are antonyms).

Professionals do things for money, IE mercenary reasons. Amateurs
do things purely for the intrinsic value of the task, driven by
their enthusiasm rather than the lure of money.

A few minutes of searching failed to turn up the source, so I'll
have to give this quote from Walter A. Willis from memory:

Anyone who believes that professionals are always superior to
amateurs must therefore prefer the attentions of a prostitute
to those of a willing and enthusiatic lover.

What is the current thought regarding getting 'music on hold' when one makes an autopatch call?

I don't use the patch that much myself, but I have heard some folks transmitting over the music or clearing the patch to get rid of it.

I suppose that this should be posted to rec.radio.amateur.policy but that group is so full of crap that I don't read it. E-mail responses and I will summarize.

Flames will be directed to /dev/null.

I guess it depends which state you live in. Here in Washington, I paid a charge for new plates (which everyone pays if they request new plates) which if remember was under 10 dollars. I don't pay any extra each year so there is no recurring cost to my ham plates. Too bad they don't say "AMATEUR RADIO OPERATOR" like some states do tho...<G>

>I understand, that he'd have a better chance in court with that cause of
>action -

Now there is the understatement of the year. Your silly and dishonest
argument (that we'll all "get our butts sued off" if we try to recoordinate
440) was clearly and dishonestly posted to stoke fears in the ignorant
rather than to promote honest and straightforward discussion.

I use the word dishonest with considerable care. It most clearly describes
your argument.

>
>>Kind of a lapse there, Mr. Reese. Let's stick to the topic of
coordination,
>>and not try to obfuscate by planting the seeds of completely groundless
>>fears of litigation. Completely groundless.

>
>Spoken like a lawyer trying to drum up business from careless folks.

Sorry, buddy. I'm two years away from hanging my shingle, so the personal
slur doesn't cut the mustard any better than the rest of your dishonest
posts about suing.

The silly argument that you made is basically that if you do anything to
anybody, they can sue you for anything. Only kind of true. Courts
regularly throw out lawsuits, with few legal costs having been accrued, when
they see that this is what is going on.

Maybe you chaps were foolish enough to give this guy some grounds for suing
you, for all I know. But your posts have had nothing but nothing to do with
coordination. You have dishonestly tried to link the coordination issue
with some problems of your own, but sorry, buddy, it doesn't cut it.

>
>The simple fact is that you're the one obfuscating here. We've been there,
>and we know what it was like.

You have dishonestly tried to link a non-issue with the coordination issue.
And even then you had to admit that the lawsuit didn't amount to anything,
even though you foolishly may have slandered the guy in your silly
newsletter, for all I know. It IS a fact that newsletters have to be
careful about what they say about people, or the body promulgating the
newsletter may get sued for libel. Few libel suits succeed, but surely

common sense tells us that. If you failed to practice common sense in your organization, I'm not surprised you were sued.

>attorneys wins."

This is absolute nonsense. There are no legal grounds. None. None. No privity of contract. No tort grounds. Nothing. Nothing! You can say this silly stuff all you want, but it is not true. And your foolish article that evidently got you sued is proof of my point. If the guy could have sued you directly on the coordination issue, he no doubt would have. But he didn't. No doubt because his lawyer told him that the suit would be dismissed for lack of a cause of action, which any attorney could file for you in an hour.

>
>In fact, the FCC rules specifically state that closed
>repeaters are allowed; they don't say that open repeaters are allowed.
>I think that is a fairly clear statement about how the FCC feels
>about repeaters: they would rather that they WERE closed.

This is a howler. But there is no merit in it. You are being silly. The FCC has very little interest in amateur radio one way or the other. They don't care.

The guy couldn't sue you over coordination as an issue. No privity of
contract. No tort grounds. No state actor. In short, NO LEGAL ISSUE.

Too bad about the slander suit, but it still proves my point.

3868. NEW REPEATER

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-29 00:00:00 UTC
From: kb0oxd@netcom.com
Message-ID: <kb0oxdD9CsGM.AGM@netcom.com>
Source record: 245663

Hello Gang:

Just a little FYI, the 145.34 repeater as listed in the ARRL Repeater Directory is, for the time being, 145.345 with a _610_ Khz. offset. Due to technical problems at the repeater site (Eldorado Mountain), the technical crew for the RMRL (the club that owns the KB0HKY repeater) has had to perform a little trickery to get the repeater up and running at its new (and permanent--we hope) home.

As I said before, the offset is _610_ Khz., instead of the standard 600 Khz. offset. The transmit frequency is _144.735_, and NOT 144.74 as it normally would be. Please consult the owners manual of your radio for setting non-standardized splits BEFORE using this repeater.

Any and all amateurs, technician class and above, are welcome to try out this new repeater. The repeater covers the Denver AND Boulder areas quite well. All amateurs are welcome to use ANY carrier-access, and PL-Tone specified repeaters in Colorado.

Speaking of PL Tones, as is with the RMRL's 440 repeaters, and unlike the club's 2 meter machines, at present, a PL Tone of 103.5 Hz. is REQUIRED to bring up the 145.345 repeater. The other three machines (the 145.22, 145.43, and 146.94 repeaters) have 103.5 Hz. PL Tone OPTIONS, and are not required to bring up those repeaters, though using the 103.5 Hz. PL Tone WILL eliminate the 1-second key-up time delay when first bringing up the machines.

Please email me DIRECT with any questions you might have.

73's for now, my friends!

Need help with using the PK-900 as a modulator for the JVFAX 7.0 FAX and SSTV program. I figured out how to use the PK-900 as a DEmodulator (turn on analog mode in the PK-900 params)but have not figured out how to transmit with the PK-900(even though there is an option in JVFAX7.0 that you can select the PK-900 in the modulator option in the JVFAX7.0 configuration menu. Has anyone done this successfuly?

I was in/at Philmont last summer, and boy, would I have LOVED to have had a radio with me up on Baldy! I got into radio through the Jamboree on the Air a few years ago, and have always been interested in electronics. I, personally, have not had any real experiences with scouts _and_ radio, other than just helping out with that, and, on occassion, at the Wichita Childrens Museum's Ham Shack (They helped with a Jamboree on the Air last year, and I help a younger child talk to a guy down in Florida... both got a kick out of it)... Well, if anyone else has any ideas, comments, or suggestions on how to get a little more excitement & adventure out of this awsome combination, don't hessitate to let me know!

Later,

>
Wait a minute now, this is not entirely true. Where are you located? There is still lots of
420 Mhz ATV activity. Just look at the ARRL repeater directory. You will find that there are lots of folks with repeater outputs on 420 Mhz. Our local repeater output is on 427.250 Mhz.

What offsets are you talking about? The only offset that I know of is that most folks operate ATV on 434.0 Mhz instead of 433.250. It is still able to be received on most modern receivers because of their AFC circuitry.

Your channel numbering is not correct. Channel 57 is 421.250 Mhz, and channel 58 is 421.250. Channel 56 would be well below the amateur band at 415.250. Channel 59 is 433.250/434 Mhz.

>

I'm sure a yagi designed for 430 Mhz with good gain and bandwidth will work much better than a standard TV antenna, even if it has extended elements.

I guess twin lead would work, but I am not sure about the loss involved with a balun. Perhaps someone else could address this issue.

My house was burglarized last October and only my ham gear was taken. He
didn't bother with the TV, VCR, stereo, etc, etc, only the ham stuff.
Fortunately, there was some kind of spat with his girlfriend and she turned
him in, bless her heart!! When the idiot spilled his guts to the cops one
thing he said was that he chose my house by just driving around till he
spotted the tower in the back yard and figgered there had to be some goodies
in there.... And to compound the felony, guess what this financial wiz
sold my beautiful TS-850S/AT for??? $40 bucks!! That alone should be
worth an extra ten years! Well, at least he is now a guest of the
Washington Department of Corrections, and all my stuff is safely back and on
the air. And to anybody who's thinking "gee, I wish I could get a nice
radio for $40 bucks", bear in mind that the guy who tried that not only lost
his money, he now has a file with his name on it at the Everett PD.

Amazing but true.

Just did this myself. I am connected to a Kantronics KPC-3. Anyway I called
and they gave me these pinouts, and they work fine.
1 - Mic, audio input
2 - ptt
3 - down (not used)
4 - up (not used)
5 - +5 volts (not used, also not sure voltage is correct, not checked)
6 - remote serial bus line to Mic (not used)
7 - mic ground
8 - chassis ground
You will need to have 5 connections 2 are ground. 3 will be connected to the
8 pin connector in front, and a separate connector 3.5mm (1/8in.) connector to
connect to the back of radio at the external volume. Make sure it is not a
stereo connector, or you will be getting the UHF receive thru that connection
also. Good Luck. If you need anything else let me know.

The following is a QST

Los Angeles County says yes to a new tower height ordinance,
the FCC says its taking orders for form 610 V and the ARRL says no
the W5YI anti bulletin petition. These stories and more on
Newsline report number 928 coming your way right now!

(*****
LA Tower

California's Los Angeles County has a new and fairly liberal
tower and antenna ordinance thanks to the mediation efforts by
members of the local ham radio community. The new law permits the
erection of a ground mounted 75 foot high retractable tower that
can be nested to below thirty-five feet when not in use. Only a
basic building permit is required. Prior to enactment of the new
law, all ground mounted towers were limited to thirty-five feet
maximum unless a variance costing over $3000 in non-refundable
filing fees was granted.
Also under the new ordinance, hams are permitted one vertical
antenna exceeding thirty-five feet, and no permit is required for

any antenna not exceeding the thirty-five foot height limit.
What about those hams who want to put up fixed towers to the seventy-five foot level? Those hams can apply for a special Amateur Radio Antenna Permit which is actually a variance that carries a $317 filing fee.
And we have saved the best part for last. Let's say you have a neighbor who does not like your tower and antenna. Well from now on, anyone wanting to challenge the installation of an approved Amateur Radio tower will have to pay for that privilege. As a part of the new ordinance, the County has instituted a $280 planning review fee that must be paid by anyone posing a challenge to a ham radio tower installation. The county says that it took this action as a way of stopping what it calls frivolous objections to the granting of antenna installation variances to licensed radio amateurs.
Work on the new ordinance was spearheaded by The Tri-County Amateur Radio Association, the Los Angeles Council of Amateur Radio Clubs, local ARRL officials and ARES disaster communications personnel.

(*****
Form 610 V

The FCC has begun accepting requests for Form 610 V, the form necessary for applying for a vanity call sign through their Forms Distribution Center at 1-800-418-3676. The agency says that it will be some time before the forms are available, however, and some people who request them may get a back order notice. Applications for amateur vanity call signs will not be accepted until some time after the forms are available from the FCC, and the Commission will make a public announcement of the date of opening of the first "gate" for vanity call sign applications.
You can also get a Form 610 V by sending an S.A.S.E. to the ARRL - VEC at 225 Main Street, Newington, Connecticut 06111. Write "Form 610 V request" on the outer envelope.

(*****
ARRL Rebuffs W5YI Petition

With the commentary period now closed, the ARRL is making known its resentment of an anti-bulletin station petition that would put W1AW off the air. The League says that the arguments in the petition filed by Texas publisher Fred Maia, W5YI to end one-way high frequency bulletin transmissions were overstated and inflammatory. This, in use of words such as "chaos" and "crisis proportions to describe what Maia sees as on-the-air dissension among amateurs related to such one-way transmissions.
In its strongly worded filing to the FCC, the League cites W1AW's sixty-five years of free service to amateurs, the absence of any allegations that W1AW creates any significant interference

to ongoing amateur communications and the value of W1AW's bulletins in alerting amateurs to disaster situations as the primary reasons for filing against the Maia rules change request.
The ARRL says that since W1AW bulletins are not intended for the general public, they are not broadcasting. This, according to definitions in the Communications Act, the ITU Radio Regulations, and the Amateur Service Rules. They are, says the League, amateur communication that has no more potential for undue interference than any normal two-way communication.
The League says that any on-air anger perceived by Maia ought to be the subject of FCC enforcement action, not rules changes.
The national society says that these situations are the direct result of the Commission allowing abuses to continue for months and years rather than addressing them in the context of the existing rules.
The League notes that there are other countries whose amateur societies also conduct informational bulletins on the air, and, in its closing arguments the ARRL urges the FCC to deny or dismiss RM-8626 without further consideration.

(*****
RENEWAL ON HOLD

Word has reached Newsline that the FCC has placed the renewal application of a Pennsylvania ham on hold. This pending the outcome of a hearing to determine if he still holds the requisite qualifications to remain a licensed radio amateur.
It comes 6 months after his conviction on 4 counts of corruption of minors and an addition 4 counts of indecent assault.

The May 15th W5YI report says that the ham allegedly attracted his victims through common interest in amateur radio. Each victim says W5YI was assaulted while spending the night in the amateurs home to use the ham station.
Last November a Pennsylvania court sentenced the ham to three consecutive terms of imprisonment for 3 to 6 months on each count. He was also ordered to pay $20,000 in restitution to his victims, this to pay for their therapy.
In designating the license for hearing, the FCC says that it plans to determine if a conviction for corrupting and indecently assaulting minors, attracted to a crime scene through amateur radio is relevant in evaluating the likelihood that a liceseholder will comply with the commisions rules that govern the amateur radio service. If the decision goes as expected, that being against the radio amateur, it will reinforce a precident that stood for years. A precedent that says the FCC con remove convicted criminals from the ranks of amateur radio.

(*****
Update on Condition of W4OYI

From the ARRL word that President George Wilson, W4OYI, continues to recover from his February 11th stroke. George is now able to communicate quite well, and thanks everyone for their good wishes.
As previously reported, back on May 1st W4OYI was transferred to an intensive rehabilitation program in Evansville, Indiana. ARRL First Vice President Rod Stafford, KB6ZV, continues as acting League President.

(*****
Newsline Home Page On WWW

Newsline has become the first ham radio on-air news service with a home page on the World Wide Web. The Newsline home page is the work of Lou Williams, KE4ARM, and sits in hypertext on a North Carolina file server system. Now, pick up your pencil and paper and get ready for the Internet address for the Newsline home page. To access it, connect to
HTTP//WWW.NCSU.EDU/HAMRADIO/NEWS.HTML
Yes, it is a Unix command line and a bit complex, so tell you what. If you did not get it, simply drop us a note at our regular e-mail address and we will send it to you. Our e-mail address is a lot simpler to remember. It's billwa6itf@aol.com.

(*****
Fund Report April

And speaking about Newsline, its time for our regular Support Fund Administrators Report.

We begin this months report by thanking everyone from the Greater Greensborough Hamfest, the Atlanta Area Kenahouchy Radio Club, and Wayne Zena's group from Plymouth, Indiana. From Ohio we heard from the Canton Amateur Radio Club. From California we heard from Charles Miller-WB6JHQ from San Dimas, and Dell Radent-N6JZE from San Diego. Finally we were left scratching or heads a little bit when we heard from South Canadian Amateur Radio Society. Apparently they are based Norman, Oklahoma.
Of coarse here in Arcadia, California we have a noisy flock of South America wild Parrots that got waylaid on their migration. Maybe this is just a group of Canucks that got migrated to Americas heartland.
Remember that clubs that support us, the club name, repeater call and service area get a mention during our newscast ID break.

Andy will be back with another report in about 4 weeks.

(*****
Central States VHF Conference

The 1995 conference of the Central States VHF Society will be held July 27 to 29 in Colorado Springs, Colorado. The conference will be held at the Sheraton Colorado Springs Hotel. For information about the conference contact Lauren Libby, KX0O,

719-593-9861.

(*****
Atom Museum Operation

Jay Miller, WA5WHN reports from the Duke City that there will be a Special Events Station, August 5 & 6 from the National Atomic Museum located on Kirtland Air Force Base. This, to coincide with the 50 year celebration of VJ Day and the reunion of the 509th US Army Air Corps Wing taking place August 5th to the 11th in Albuquerque.
Jay says that the callsign for the special event operation will be K5QQ with operation in the General Licensee phone band on 15, 20 & 40 meters. The Station itself will be set up right next to the B-29 display just outside the Museum.
QSL requests along with an S.A.S.E. go to the National Atomic Museum Special Events Station, P.O. Box 6552, Albuquerque, New Mexico 87197-6552.

(*****
DX - Jason

In DX, from the United Kingdom comes word that Project Jason is the operational name of a worldwide educational program for the development of young peoples interest into the world of communications has begun.
To commemorate the event, stations GB0JAS, GB6JAS and GB4JAS will be operational from June 3rd to November 11th on 80, 40, 20, 15, 6 and 2 meters and on 70 Centimeters for 12 hours a day.
QSL as directed on the air.

(*****
Yaesu DX Caribbean Cruise goes VHF

The Yaesu DX Caribbean cruise scheduled for June 18th thru June 25th will be operating on 50, 144 and 432 MHz SSB as well as on the high frequency bands. Operators are willing to make schedules with interested VHFers wanting rare grid squares or maritime mobile contacts. Contact Gordon West, WB6NOA to arrange a scheduled UHF or VHF sideband contact and for other scheduling information.

(*****
New England Ham Wins QST Cover Award

Congratulations to Mike Ardai, N1IST, of Brighton, Massachusetts. Mike is the winner of the QST cover plaque award for April 1995. His article, "Building a Digital Voice Recorder for Less Than $15" was selected as the best article in that issue by the ARRL Board of Directors.
Mike is an active member of the Boston ARC and manages various Amateur Radio distribution listings on the Internet. He will receive an attractive plaque to celebrate the selection of his

article.

(*****
Pentium Fun

And finally, it would seem that Intel Co. has had some salt poured into their gaping wound over the bad Pentium chips. AC4BZ reports via packet radio that a California company, Silicon Valley Ware, has found a new use for defective Pentium chips. They're making jewelry out of them. AC4BZ says that an ad in the latest issue of Playboy Magazine notes that you have your choice of earrings, bracelets, necklaces and key rings made from a Pentium chip.

(*****
And for this week, that's all from the Amateur Radio Newsline.

3881. Re: ? Open 440 repeaters in SoCAL ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-29 00:00:00 UTC
From: CVQX20A@prodigy.com
Message-ID: <3qdbhc$1ftc@usenetp1.news.prodigy.com>
Source record: 245676

They plan to open up a machine on a pair
>that so far has had no activity (for 4 days from what I understand)
without
>the blessings of SCRBBA. What other course of action can a group take
if
>SCRBBA ignores them?
>

Let me tell you where they can go to John. S.E.C.R.E.T. SEventy
Centimeter RE-coordination Team.

I am circulating a petition (not that I need one to form the
organization) but it clearly states at the beginning...

"I am signing this petition to show my support for S.E.C.R.E.T. and its
efforts to re-coordinate the seventy centimeter band in Southern
California. The current band plan as designed by SCRBBA is monopolistic
and does not serve the better interests of the amateur community."

I am having the by-laws drafted and edit as we speak and will have them
ready to go in about 2 weeks along with a growing list of participants
(members who arent forced to pay like SCRBBA does). The list is about 25
names deep and growing daily. I will have the list/petition of support
at every HAM swapmeet for anyone to sign.

I have checked with the FCC private radio bureau and they do not require
me to send them paperwork one, however, I will mail them a copy of all
the signatures I have obtained on the petition as well as a copy of the
by-laws and who the President and Secretary are ging to be.

Coordination will only be granted on repeater pairs where there are no
active/physical repeaters. Closed or Private repeater efforts will not be
sanctioned by our body. I have 3 high-level repeaters (not mine but
they're ready to go) on the verge of going up (I mean WAY up). High
coverage, and high quality. 97.101 (d) will be the greatest obstacle but
fortunately since I have documentation showing what is coordinated on
paper and what is not, I can safely coordinate (without SCRBBA able to do
SQAT about it).

ANY AMATEUR RADIO OPERATOR WHO WISHES TO BE RECOGNIZED FOR COORDINATION
IS WELCOME TO HOP ON THE S.E.C.R.E.T BAND WAGON. SEND ME PRIVATE E-MAIL
WITH YOUR CALL AND ADDRESS/PHONE AND YOU WILL BE RECOGNIZED ON THE MEMBER
ROSTER AND SENT A PROXY PETITION TO SHOW YOUR SUPPORT AS WELL AS A COPY
OF THE MEMBER LIST. NO SECRETS, NO JOKE.

STOP THE LIES, STOP SCRBBA.

3882. Smoking Radio

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-29 00:00:00 UTC
From: an262119@anon.penet.fi
Message-ID: <210337Z29051995@anon.penet.fi>
Source record: 245677

I tired what you said and here is what happened.

When I keyed up the mike on my CB a very loud buzzing noise came out of the HXT202. I talked into the CB and could heer myself on the HTX. It was pretty cool until the smoke started coming out. Smoke came out of my HXT202 and it stunk really bad so I unhooked all of the stuff. I think that maybe I did not do something right. Now my HXT202 does not work and smells reely bad. I am going to take it back to Rad Shack and tell them what happened and see if they will give me a new one. It is only one week old and should not burn up after only a week. A firend of mine says that maybe the CB linear was to big and that is what caused the thing to burn up. I hope that Rad Shack will get me another HXT. When I get the new one, I am just gonna hook it to my TV antenna and forget about the linear.

Keep the rubber side down and watch out for Smoky Bear.

Bubba

This is what I tried.....

>> 1. Leave a CB transceiver hooked to the amplifier's "Transmitter"
connector
>> in order to provide a 50 ohm load and prevent oscillation.
>>
>> 2. Connect the "Antenna" connector of the amplifier to the "Antenna"
>connector
>> of the HXT202.
>>
>> 3. To test, Key the mike on the CB transceiver and the Push-to-Talk
button o
n
>> the HXT202 simulatneously. You should now be able to hear audio from
the CB
>> transceiver on your new rig, indicating that everything is working OK.
>>
>> 4. You're ready to go!
>>

Hi from the Straits of Mackinac in northern Michigan.

Just acquired a Dentron model 8889 "Jr. Monitor" antenna tuner
without manual.

I can get it to work, but suspect I am missing a part of the "proper"
adjustment proceedure ??

Does anyone out there have such a unit & perhaps fill me in on
the right tuning proceedure?? (three controls -- a) "transmitter match"
b) a multi-position coil switch c) "antenna match")

Thanks much! Please respond to my e-mail address.

Well, I just started volunteering on the project last Saturday, and when I
got there they had the "parasol" (ie, the antenna panel) out in the back yard
pointed up and were working Oscar 13 through it. Not often you see a QSO
that involves going through TWO satellites. :-)

Sorry, but that is my honest belief. I truly believe that that is what will
happen, based on my personal experience. You see, Roger, I've been there.
You haven't.

>I use the word dishonest with considerable care. It most clearly describes
>your argument.

I am stating that which I truly believe. You may attack those beliefs, but
please allow me the courtesy of at least believing my own argument.

>Sorry, buddy. I'm two years away from hanging my shingle, so the personal
>slur doesn't cut the mustard any better than the rest of your dishonest
>posts about suing.

Well, then, you sound like a law student with dollar signs dancing in your
eyes.

Come talk to me when you get out into the real world.

>The silly argument that you made is basically that if you do anything to
>anybody, they can sue you for anything. Only kind of true. Courts
>regularly throw out lawsuits, with few legal costs having been accrued, when
>they see that this is what is going on.

This may be true in California today, but it was not true in Texas when we
got sued. It is a fact - and you have no personal knowledge of this, so you
are in no position to refute it - that, had our lawyer not donated his time
to the Society, that we would have run up a thousand dollars or so in legal
fees.

>Maybe you chaps were foolish enough to give this guy some grounds for suing
>you, for all I know. But your posts have had nothing but nothing to do with
>coordination. You have dishonestly tried to link the coordination issue
>with some problems of your own, but sorry, buddy, it doesn't cut it.

You failed to answer my central question about this, so I'll ask again - if this had nothing to do with coordination, why, then, was the offer repeatedly made to drop the suit in exchange for our coordinating the guy's repeater?

As for grounds for the libel suit, Joe Jarrett's post answered those in quite sufficient detail. I refer you to it if you haven't read it already.

I still have a KDK FM-240 2 meter transceiver for sale along with the manual, speaker mic, and MFJ external speaker...I'm asking $225. If you're interested leave me email here or give me a call at 214-233-2386. Thanks and 73, Fred, W5HTR

3889. Field Day PC Logging Program?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-30 00:00:00 UTC
From: leigh@rain.org
Message-ID: <3qe0j8$paa@news.rain.org>
Source record: 245537

I'd like to use a logging program for our club's Field Day station this year. Suggestions and sources are welcomed. My computer is basic: a 12 mhz/286 PC clone.

Thus far I've tried Hamlog3 ftp'd from oak.oakland.edu. It seems to be mainly for DX, and does not seem too flexible in the "contest" mode. Another program I've downloaded ("Radiolog") seems mostly for non-ham SWLing. Are there any programs intended specifically for Field Day use?

Thanks in advance and 73 from Leigh/KM6JE.

3893. Digest of Articles - QST Apr 95 (Long - 38k)

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-30 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <3qes43$r0v@horus.infinet.com>
Source record: 245541
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the April, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Building a Digital Voice Recorder for Less than $15
Author>Ardai, Michael L. - N1IST

Source>QST Apr 95, pp. 28-29
Abstract>Describes a DVR built from the electronics removed from a "talking" greeting card.

DIGEST>Shops that sell greeting cards now display a variety of "talking cards". These contain recording/playback circuits, including miniature microphones and loudspeakers, that will "speak" a pre-recorded 10-second message each time the card is opened.

N1IST removed the audio system from a card that he bought for $7.95 and made a digital voice recorder (DVR) for amateur radio use from it. This DVR does not require a computer for its use! It makes an ideal accessory for Field Day or contest usage when one particular message must be transmitted repeatedly.

The particular card that the author selected was made by Hallmark. He removed the tiny PC-board containing the electronic circuit and mounted it in a small metal box, for shielding. Since his transceiver supplies 8-volts d.c. on the microphone plug and the DVR circuit operates on 6-volts, he placed an LED in series with the positive supply voltage to obtain approximately 2-volts drop. The LED also gives a visual indication of when the audio circuit is active.

In order to make the recorded message automatically key the transmitter, an opto-isolator was placed in series with the LED and its output transistor grounds the PTT line. An 8:1000-ohm audio step-up transformer is used to supply the audio to the microphone input of the transceiver. These components, plus two switches, a headphone jack, and a microphone plug, are the only components necessary to be added to the original PC-board to make a complete, operating DVR.

The article contains a complete wiring diagram and parts list. To adapt the system for use with rigs that do not supply proper supply voltage on the microphone plug, the diagram also includes optional voltage regulators to drop the 13.8-volts from the main power supply to 8-volts.

Title>TA2:How to Evaluate Your Antenna Tuner - Part 1
Author>Witt, Frank - AI1H
Source>QST Apr 95, pp. 30-34
Abstract>How to test tuning range, power loss, SWR bandwidth, output balance, power limits, and harmonic attenuation of antenna tuners at all operating frequencies.

Digest>Antenna tuners, when properly used, are extremely useful devices. However most hams, even those who use tuners every day, know little about their characteristics. AI1H, in this series of articles, explains how to use some basic test gear to measure the salient characteristics of any tuner.

The important variables to be measured are:
1. Impedance range - the range of antenna impedance that can be matched to 50-ohms

2. Power loss in the tuner
3. The bandwidth over which SWR can be kept below 1.5:1 for each antenna in use
4. Output balance - is the "balanced output" truly balanced?
5. The limit of power that can be handled for various loads
6. Degree of harmonic attenuation (if any), on each band

Characteristics 1. through 4., above, can all be measured using only a low-power SWR analyzer and a switchable resistance box. SWR analyzers are coming into common use by many hams and are offered by AEA, MFJ, and other suppliers. As for resistance boxes, the article contains instructions for building two of them, for use in simulating balanced and unbalanced loads, respectively.

Each resistance box uses a multi-position rotary switch to select one of a series of quarter-watt resistors across the terminals. The resistors are scaled geometrically; after the first one, each subsequent value is approximately twice the ohmage of the previous one.

The balanced load box contains a second rotary switch, with four positions. It allows one side of the balanced line, or the other side, or the center neutral, to be grounded. Its fourth position provides no ground connection, so selecting it causes the line to float.

To evaluate a tuner, the author first establishes the impedance range at the frequency extremes; he makes measurements at 1.8-, 3.5-, and 29.7-MHz. Then he steps through the following procedures:
1. Set the frequency
2. Set the load to 50-ohms, for an unbalanced load, or 200-ohms for a balanced load, and adjust the tuner for 1:1 SWR
3. Perform the impedance range test
4. Perform the power loss test
5. Perform the SWR bandwidth test
6. Perform the output balance test (on balanced tuners, only)
7. Switch in another load, readjust for 1:1 SWR and repeat steps 3 through 6 for each step of load resistance
8. Step to the next test frequency and repeat steps 2 through 7.
The article gives detailed instructions of how to make each of the tests listed above.

The most striking results that the author describes are from the power loss test (Number 4), which demonstrates that, under certain operating conditions, a shocking amount of power loss can occur in the tuner. If such conditions exist when the tuner is being used with a high-power transmitter, hundred of watts may be dissipated in the tuner itself. That would certainly be enough to burn up (or melt down) almost any tuner!

In the next installment of this two-part series, AI1H will describe the results he obtained in evaluating three different types of antenna tuners.

Title>TA3:An HF Hum Interference Mystery Solved!
Author>Williams, Lyle Russell - KC5KBG
Source>QST Apr 95, pp.35-37
Abstract>Describes a peculiar HF noise source, and how to eliminate it from receivers.

Digest>KC5KBG describes a type of hum that sometimes is noticed when one is using an HF receiver with a whip antenna and no separate ground lead. That kind of hum is rarely heard in a receiver that uses a coax cable antenna lead or is operating at frequencies other than HF.

The noise is caused by the fact that a whip antenna is inherently unbalanced; r.f. voltage picked up on the antenna can be detected only when it is compared against ground potential. Without a separate ground lead, the ground return must be developed through resistive or capacitive coupling to ground. In most cases, the lowest impedance path to ground from an a.c.-powered radio is through the capacitive coupling between the windings of the power transformer and through the rectifiers and power line to outside ground.

Since bridge rectifiers are commonly used, the described ground return passes alternately through one pair, and the other, of the rectifiers, depending on the instantaneous phase of the mains power. At the instant of changeover, there is a brief period when neither set of diodes is conducting. During this instant, the r.f. signal is greatly attenuated. Since this interruption occurs on every half-cycle of power frequency, it is expressed as a 120-Hz. hum. The reason it is rarely heard at low frequencies is that the reactance of the small capacitance between windings in the transformer does not allow a significant ground return through that path, so other leakage paths provide the only available path. It is not heard at VHF because the transformer and the power lines, themselves, provide enough inductance to block that return path.

The way to eliminate the problem is to provide a separate ground lead to a low-impedance ground connection and/or use a common-mode choke on the power cord leading to the radio. This choke can be a ferrite toroidal core or rod with a number of wraps of power cord through or around it.

Title>TA4:A Remote-Oscillator, High-Frequency VFO
Author>Smith, Lew - N7KSB
Source>QST Apr 95, pp. 38-40
Abstract>A classic VFO circuit modernized with state-of-the-art components.

Digest>In this article, N7KSB describes a VFO for QRP operation that uses a classic Colpitts circuit brought up to date with modern components. The main tuning capacitor is a tuning diode, the oscillator is a JFET, and two buffers are made of high-speed CMOS octal inverting buffer chips.

The unit is built in two pieces: the oscillator is in an r.f.-tight metal box to be located some inches or feet away from the buffer and

power supply assembly, which is in a separate enclosure. Separating the two assemblies isolates the frequency-determining circuit from the heat, vibration, noise, and possible feedback from the other portions of the radio. Remote operation is facilitated by the fact that tuning is done electrically rather than mechanically.

If it is desired to use the oscillator on more than one band, the author strongly recommends that no attempt be made to bandswitch oscillator tank circuits and use a single transistor. Instead, duplicate all components of the oscillator for each band and switch the outputs to the first buffer.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>PR1:ICOM IC-736 and IC-738 Transceivers
Author>Cain, James D. - K1TN and Swanson, Glenn - KB1GW
Source>QST Apr 95, pp. 67-71
Abstract>Performance characteristics of a pair of ICOM transceivers.

Digest>ICOM supplies two HF transceiver models built from many of the same subassemblies. The IC-736 differs from the '738 in that it has a self-contained power supply, MOSFET final amplifiers, and can operate on the 6-meter band; whereas the IC-738 lacks those features. The '738 uses bipolar final amplifier transistors and requires an external 13.8-volt d.c. power supply. Otherwise, the two models are identical.

Both models contain almost all of the features that are expected in modern full-featured transceivers: dual VFOs, a large number of memory channels, scanning, automatic antenna tuners, and the like. In addition, they have built-in electronic keyers. Available optional i.f. CW filters are confined to 500-Hz. bandwidth. Output power is adjustable from about 5- to 100-watts for both models.

A nice additional feature involves split-frequency operation. There is an XFC button which, when depressed, allows one to adjust the transmit frequency and/or listen to it, when desired. In addition, receive and transmit frequencies are displayed at all times.

A hand mike is supplied as standard equipment which contains UP and DOWN pushbuttons to adjust frequency or select memory channels. The tuning speed of the main dial is adjustable to select fine tuning steps of 10-, 20-, or 50-Hz., and also quick-tuning in either 1-Hz. or 1-KHz. steps.

Another very interesting feature is a tuning "memo pad" that stores frequencies in a memory "stack" on a last-in/first-out basis. If one, in scanning across a band, finds a station that she/he wants to return to, its frequency can be stored by pressing the "memo pad - write" (MP-W) button. Later, the saved frequencies can be recalled using the

"memo pad - read" (MP-R) button. ICOM also supplies an optional computer interface and software to make it possible to control almost all of the functions of the trasceiver from a transceiver.

The reviewers used the radios in a number of on-the-air activities and found them to be excellent performers, but with some disappointing or annoying limitations. For CW operators, the lack of a variable CW offset is likely to be a major annoyance; the CW offset is fixed at 740-Hz. Another annoyance results from intermodulation distortion (IMD) in the receiver audio. When one is listening to a CW pileup, the IMD of all the various signals causes spurious tones that are not necessarily coordinated with the keying of each station in the passband. This makes it well nigh impossible to separate out in one's head any one of the signals.

For SSB operators, there are no filter options available, and passband tuning shifts only one side or the other of the i.f. bandwidth, not both at the same time. The receiver audio IMD, noted earlier, causes strong SSB signals to sound "muddy". Notch filtering and signal processing are both done in audio, not i.f., with compromising results.

Manufacturer's list prices for the basic receivers are: IC-736 $2385; IC-738 $1935. CW 500-Hz filters for 1st and 2nd i.f. add $274; power supply (for the '738), $330.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:Adjusting HF Yagi Matches
Author>Beezley, Bryan - K6STI
Source>QST Apr 95, p. 74
Abstract>Verified: Yagi antennas can be accurately matched at ground level, if they are pointed upward.

Digest>K6STI is the publisher of the MN series of computer software for antenna analysis. In this letter, he addresses the question of how best to adjust the feedline match of Yagi antennas.

"Conventional wisdom" has it that one can make an accurate matching adjustment of a multi-element Yagi antenna without the need to raise it to full height by aiming it vertically upward. The author decided to test this procedure by using the program NEC which, unlike the less sophisticated MININEC, is able to calculate antenna performance taking full account of the effects of the ground.

First, he modeled a five-element 20-meter Yagi with a 40-foot (12.2-m.) boom in free space and made the necessary adjustments in dimensions to obtain a 1:1 SWR. Then, he modeled the same antenna with the reflector element only 3-feet (1-m.) above real ground, pointed upward. In that configuration, the SWR increased to only 1.013, an insignificant change.

Thinking that the good results may have been caused by the fact that the F/B ratio of that antenna is so high, he next modeled a 4-element beam on a 30-foot (9.1-m.) boom, which was optimized for forward gain. The resulting F/B ratio was only 11-dB. Following the same procedure as before, he found that the effect of the ground caused a rise of SWR only to 1.19, still nearly insignificant.

The obvious conclusion of these tests is that, in this case, "conventional wisdom" is correct. It is true that a Yagi antenna can be accurately matched while at ground level, so long as it is pointing directly upward.

Title>TC2:Designing a Vertical "J" Antenna
Author>Belrose, John S. (Jack) - VE2CV
Source>QST Apr 95, pp. 74-75
Abstract>Design dimensions for "J" antennas, for any frequency and conductor diameter.

Digest>Vertical "J" antennas are widely used on the VHF bands, and are very effective omnidirectional radiators. In its most basic form, a "J" is a vertical half-wave dipole with a quarter-wave open-wire stub attached to the bottom end, all made as one assembly. They are easily constructed from copper water pipe, or other readily-obtained materials and a wide variety of plans have been published in ham literature for such antennas sized for the 2-meter band.

VE2CV, in this letter, generalizes the dimensions so that an accurate design can be made for any frequency. Calculating the dimensions is complicated by the fact that the equivalent electrical length of a radiator becomes greater as the diameter increases. The author used NEC-2 software to calculate the increase of equivalent length as a function of its diameter expressed in fractional wavelengths, and plotted the data in the form of a convenient graph.

The graph is included with the letter, as is also a series of well-known equations expressing the dimensions of radiators and stubs.

Title>TC3:Easy Measurement of Coaxial Cable Loss
Author>Jensen, Ed - K5ED
Source>QST Apr 95, p. 75
Abstract>How to measure coax loss without disconnecting it from the antenna.

Digest>K5ED suggests that it is easy to measure the loss in a coax cable that is already in use attached to an antenna, without disconnecting it. To do so, one uses a calibrated SWR meter, such as the Autech RF-1, to find peaks in the SWR at frequencies remote from the antenna resonances. Then the loss in dB. can be calculated from the formula:

Loss = 10 * log[(SWR + 1) / (SWR - 1)]

To avoid the necessity of making the calculation, the author presents a curve showing SWR, from 2 to 15, on the horizontal axis and loss in dB., from 0 to 5, on the vertical.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:A Quick Antenna for 223-MHz
Author>Cameron, William Bruce - WA4UZM
Source>QST Apr 95, p. 72
Abstract>Building a simple vertical antenna from copper wire.

Digest>WA4UZM has designed a simple antenna made of Number 10 copper wire. It is essentially a "J" antenna with a quarter-wave stub at the top end, as a phase reverser, and another half wavelength of wire above it. The top half-wavelength, phasing stub, lower half-wavelength, and lower stub (the bottom end of the "J"), are all bent from the single piece of wire. At the top end, for adjusting the SWR, he slips a 6-inch (15-cm.) piece of 1/4-inch (6-mm.) OD copper tubing over the wire, adjusts it to find the lowest SWR, then solders it in place.

Title>HK2:Low-Pass Filter Cures Touch-Tone Lamp Interference
Author>Birgenheier, Leo G. - AC4DA
Source>QST Apr 95, pp. 72-73
Abstract>Eliminating interference to a touch-tone lamp from a radio transmitter.

Digest>In a "man-bites-dog" vein, AC4DA found that his transmitter interferes with his touch-controlled lamp. He was able to eliminate the problem by inserting a low-pass filter and resistor in series between the lamp's antenna and its oscillator.

He discovered that the lamp's control circuit oscillated at 244-KHz., so the low-pass filter he used was a simple pi-network with a 2.2 mH. coil and an 82-pf., 1-KV. capacitor on either side. The resistor in series between the filter and the antenna is 2200-ohms, 1/4-watt.

In another similar case, if the oscillator frequency is found below 244-KHz., the same filter parameters can be used. If it is higher, the author suggests scaling the components in a ratio equal to that between the oscillator frequency found and the author's 244-KHz. In other words, if the new lamp oscillates at 300-KHz., then the scaling factor should be 244/300=0.813. Multiplying both the inductance and capitance by that factor will find the correct values.

Title>HK3:Filter Capacitors Cure Electric Toothbrush Interference
Author>Sullivan, William P. - W1RYE
Source>QST Apr 95, p. 73
Abstract>How to eliminate radio interference from an electric

toothbrush.

Digest>Mr. Sullivan's wife complained of buzzing in her kitchen AM radio when it was tuned to a particular, rather weak, station. The author tracked down the source and found it was being caused by their Bausch & Lomb INTERPLAK Model PB-6 electric toothbrush! After he called the manufacturer, the company sent him a replacement unit containing filter capacitors, whereupon the problem disappeared.

In an accompanying note, the editor suggests another solution would be to unplug the base when the toothbrush is fully charged, and not plug it in again until the battery is discharged.

Title>HK4:Shaver Brush Cleans Hand-Held Transceivers
Author>Anglesey, Jeff - KB7TJM
Source>QST Apr 95, p. 73
Abstract>Cleaning brushes supplied with electric shavers do a good job cleaning dust and dirt from an H-T's buttons and speaker grill.

Title>HK5:Cleaning Up the OMNI V's Beep Tone - Revisited
Author>Hamel, Patrick E. - W5THT
Source>QST Apr 95, p. 73
Abstract>A simpler solution than in QST Mar 94 H&K.

Digest>In the QST Mar 94 Hints and Kinks, a note explained that the OMNI V transceiver should emit an audible beep when a button is pushed, but many of them make a "pop" instead. A solution was offered that required some modifications to be made.

W5THT offers a simpler solution that only requires that R-57 be replaced with a .0027-mfd. capacitor.

Title>HK6:A Base Station Ground Strip
Author>Rulffs, George, Jr. - AA4GR
Source>QST Apr 95, p. 73
Abstract>A convenient ground strip mounted on the operating desk.

Digest>To provide a convenient way to ground all the equipment on his operating desk, AA4GR mounted a 3/4 x 3/4-inch (19-mm.) aluminum angle across the back edge of the shelf holding his equipment. Six evenly-spaced holes drilled in the aluminum are fitted with either bolts and wing nuts or uninsulated banana jacks. The former are used for grounding station equipment; the latter for easily plugging and un-plugging ground leads to H-Ts and other portable/mobile equipment.

The angle is securely connected to a ground rod immediately outside the window of the shack via a copper braid.

FEEDBACK (FB)

Title>FB1:"Is This Ewe for You?", QST Feb 95
Author>Koontz, Floyd - WA2WVL
Source>QST Apr 95, p. 75
Abstract>The heading for Table 4 in the subject article should read: "Ewe Paramaters for Top Feed..." instead of: "Bottom Feed".

Title>FB2:"A Remotely Controlled Antenna Switch", QST Apr 93
Author>Thompson, Nigel - KG7SG
Source>QST Apr 95, p. 75
Abstract>Describes one condition in which the switch does not operate properly.

Digest>KG7SG discovered that his automatic antenna switch sometimes flips improperly between 160- and 80-meters when he is working on the 160-meter band. This happens because the band signal from his IC-735 drops a bit during transmit. Since the reference signal does not drop, the ratio between the band and reference signals changes, causing the switch action. He does not offer a solution to the problem.

NEW HAM COMPANION (NHC)

Title>NHC1:A User-Programmable IDer
Author>Silva, Robert - WB2OXJ
Source>QST Apr 95, pp. 56-58
Abstract>Building an automatic CW IDer.

Digest>Mr. Silva presents a construction article to build an automatic IDer that will key a morse code identification sequence, or other message, after the sequence has been entered into the unit's memory.

The whole unit is built on a small PC-board, only slightly over 2-inches (50-mm.) square. It contains all components except power supply, which is a standard 9-volt battery.

To program the message into the circuit, one uses a standard PC-AT-compatible keyboard. It uses an integrated circuit containing both an 8-bit microcontroller and a 1024-bit serial EEPROM, 3 transistors and a few other parts.

A complete kit of parts, including etched and drilled PC-board, is available for $34, including domestic shipping, from the author at: 341 Wicomico Rd., Stevensville, MD 21666. For overseas orders, add another $4.

Title>NHC2:Test Your Knowledge!
Author>Silver, H. Ward - N0AX
Source>QST Apr 95, p. 59

Abstract>A quiz for readers to rate themselves in their amateur radio knowledge. It is not suitable for digesting.

Title>NHC3:Build the Camper's Portable Ham Shack
Author>Jones, Bill - KD7S
Source>QST Apr 95, 60-61
Abstract>Construction of a combined carrying case/operating desk for use while camping.

Digest>KD7S is an enthusiastic camper, and likes to operate ham radio from camp. In order to "do it in style", he has constructed a combined carrying case and portable operating desk, in which he mounts all his equipment.

Built mainly of 1/2-inch (13-mm.) particle board, the case is approximately a 12-inch cube (30-cm.). The front cover is a drop-front door which lowers to form an operating table. This exposes the front panels of the equipment on the three shelves, making a compact and efficient operating desk. The author recommends that anyone wanting to build a similar unit should dimension it to contain their own pieces of equipment.

In the article, he also includes schematic diagrams and parts list for two accessories that he finds useful. One is a reverse-polarity protection circuit to avoid possible damage in case an external 12-volt power supply is connected with reverse polarity. The circuit causes a fuse to blow instantly, in that case.

The second accessory is an expanded-scale d.c. voltmeter. It is built on a panel, permanently mounted in the cabinet.

Title>NHC4:Dialing for Deals
Author>Keith, Larry - KQ4BY
Source>QST Apr 95, pp. 62-64
Abstract>Systematically negotiating purchases by telephone.

Digest>Mr. Keith lives in a small town, far from the nearest dealer in radio equipment. Consequently, when he buys new equipment, he does most of his negotiation by telephone. To be reasonably sure that he is getting one of the best deals, and to make the best use of his time, he has worked out a systematic procedure for interviewing sellers by phone.

When he feels the need of new equipment, he attends hamfests, reads equipment reviews in magazines, and collects sales literature from advertisers. From such information, plus word-of-mouth reports from other hams, he decides the make and model he wants. Then he lists all of the names and phone numbers of the dealers he has identified as handling that equipment.

He has drawn up a combination check list and questionnaire which he consults, and fills out, each time he calls a dealer. Among the items

on the list are the name and address of the dealer; name of the person contacted; their quoted price; quoted shipping cost; taxes; availability from stock; trade-ins accepted and the offer; payment options; discounts, if any; plus a series of impressions he gains about the attitudes displayed by the dealer's representative.

After making a considerable number of calls, he has an equal number of questionnaires filled out, and he tabulates the data. Typically, there is a considerable range of prices offered, especially after the offer for his trade-in is netted out. He does not necessarily select the lowest offer, since there are many other factors that are also important. But after surveying the list of offers, he makes a cut-off price, above which he will not pay, and eliminates all offers above that.

From the remaining candidates, often after additional telephone conversations, he makes his final selection.

Title>The Doctor is IN
Author>Various
Source>QST Apr 95, pp. 65-66
Abstract>Questions and answers of interest to newcomers to amateur radio.

Digest>In this issue, the questions discussed include: the frequent failure of the FCC to print "Technician Plus" on recently-issued licenses to persons earning that classification; use of open-wire feedlines on VHF/UHF; use of Type N feedline connectors in UHF; telescoping whip antennas on H-Ts; how to park beam antennas in high winds; the true meaning of "effective radiated power" (ERP); a "reverse autopatch" on a repeater; and other items.

RADIO TIPS (RT)

Title>RT1:Optimizing Your Packet TNC
Author>Anonymous
Source>QST Apr 95, p. 64
Abstract>Suggested changes to TNC default settings for optimizing packet operations.

Digest>The default settings in modern TNCs, as received from the manufacturer, are usually adequate to get started on packet. However, several items deserve consideration for readjustment to optimize performance.

First is transmit delay time. This should be set long enough to be compatible with the turn-around time of the transceiver in use, but not unnecessarily longer. It can be reset by typing: TXdelay n (in which "n" is a number between 0 and 120 representing the number of 10-millisecond delay increments.)

The turn-around time of any transceiver may not be specified in the operating manual. If it is not, the operator must experiment to find a suitable delay. Transceivers that use mechanical relays for transmit/receive switching, that use synthesized frequency determination, and that use external amplifiers, all require somewhat longer delay times.

The other items that should be considered are the unacknowledged packets (MAXframe) and packet length (Paclen) parameters. Both should be conditioned on propagation and channel activity.

MAXframe specifies the maximum number of packets the TNC will allow before receiving acknowledgements. Paclen selects the maximum number of bytes in each packet. If operating conditions are good, a reasonable starting number for MAXframe is 4, and for Paclen, 128. But when VHF operating conditions are not so good, or there is a high level of activity on the channel, and always when operating on HF, these values should be reduced. To set the former parameter, use the command: MAXframe n (in which n is a number between 1 and 7). For the latter, use: Paclen n (n is a number from 0 to 255, in which 0 stands for 256!)

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Wind and Sand: A DXpedition to Tidra Island
Author>Ackerman, Susan Yoder
Source>QST Apr 95, pp. 47-49
Abstract>Describes a difficult DXpedition.

Digest>Tidra Island is a barren sand bank in the Atlantic Ocean off the coast of Mauretania, and is part of that country's national park of the "banc d'Arguin". The author, her husband, and four other men made a short visit there and operated 5T0RIM from their camp site.

They were taken to the island by a fishing boat, and set up their tents in a howling wind. The wind was sufficiently strong to drive sand through their tents and into all of the equipment they took along. For the first day or so, the expedition was a seeming disaster. Later, however, the wind abated and they were able to get some equipment operating. In the end, they succeeded in making more than 3000 contacts, but that was fewer than one-third of the number they had expected to achieve. Nevertheless, the DXpedition has to be counted as a success.

Title>GI2:Welcome to Mallard Marsh
Author>Wall, Cynthia - KA7ITT
Source>QST Apr 95, pp. 50-51
Abstract>Describes experiences of two amateurs who are volunteer hosts at a National Forest campground in Oregon.

Digest>Mallard Marsh is a campground on Hosmer Lake in the Deschutes National Forest in Oregon. For more than 30-years, Max and Nila Peel

have camped there and, for the last 7-years of that time, they have served as unpaid volunteer campground hosts. Four years ago, they both became hams; Max is N7YDG and Nila is N7ZYN. They operate their ham stations from their camping trailer during their stays, every summer.

This article describes the volunteer services that they provide, and the fun that they have doing it.

Title>GI3:The Dodge Dipole
Author>Horlick, Jeff - KZ3F
Source>QST Apr 95, pp. 52-53
Abstract>Two station wagons, parked nose-to-nose, become a dipole antenna.

Digest>From the earliest beginnings of amateur radio, hams have told stories about unconventional antennas that have actually radiated and received radio signals. KZ3F has added a new chapter to the continuing story by loading up his two Dodge station wagons as the two legs of a center-fed dipole.

He parked them on the street, nose-to-nose, with an inch or two separating their front bumpers, and fed them through a 1:1 balun connected to the radiator brackets on each car. With a noise bridge, he determined that the resonant frequency of the resulting "antenna system" was about 19.5-MHz., at which frequency the radiation resistance measured about 20-ohms. Without using a tuner, he was able to load it on the 20-, 17-, and 15-meter bands. The rubber tires on a dry pavement apparently provided sufficient insulation from ground to allow the antenna to radiate useful power.

Regretably, the author does not list the number of QSOs, nor the states and DXCC countries, that he worked using his remarkable antenna.

Scott, I have a simple question for you. Should you succeed in your efforts
to unseat SCRRBA as the frequency coordination body for southern CA, what do
you plan to do with the existing closed systems?

If your proposed organization is to have any hope of success, it will have to
serve the trustees of these existing systems in the same fashion you propose
to serve those wishing to put on open systems. If you do not, then your group
will be guilty of exactly what you accuse SCRRBA of.

I like CW. Reading Gary's posts feels like finding out
that there is no Santa Clause. Or more accurately, I have
a feeling like when I converted to conservatism while reading "Atlas
Shrugged" by Ayn Rand in my college days. ;-)

Seriously, I want to know about the modulation techniques Gary
describes. There is nothing I know of that would keep
everyone from using it! Heck, the ARRL band plan allows any
digital transmission down to the bottom of every HF band as long
as the bandwidth isn't too wide.

I have thought of one possible argument in favor of CW, but it
is probably irrelevant. In the event of a nuclear detonation,
it is my humble understanding that all solid state equipment
within hundreds of miles will be destroyed by the EMP.
With the news I hear from the CIS, Tehran, and assorted 3rd
world places, a hostile nuclear detonation sometime in the next
thirty years seems likely. When it happens, some of us
tube users will still be able to communicate, no?

>
> because they live on a mythos that says "CW gets through when
> nothing else will". That's not true today, and hasn't been true

>In article <3qcr4c$abr@usc.edu>,
>Well, then, you sound like a law student with dollar signs dancing in your
>eyes.

A slimy personal slur. Beneath contempt. I started this thread to
encourage a discussion about Southern California coordination. As a
licensed amateur since 1967, it is a subject that I have considerable
knowledge of.

You have not contributed constructively to this thread by trying to frighten
people with invalid claims. You guys in Texas got sued for libelling
someone with whom you were evidently having a coordination tussle. You
libelled him. This is a different thing.

Bottom line: you should't have libelled him.

>Come talk to me when you get out into the real world.

You seem to have very little knowledge of the real world. You do seem to
have a knack for libel, based on your own recounting of your real-world
experiences.

On the other hand, I have, I think, clarified the fact that you got sued not
for being poor frequency coordinators; you were sued for LIBEL.
>
>This may be true in California today, but it was not true in Texas when we
>got sued. It is a fact - and you have no personal knowledge of this, so you

>to the Society, that we would have run up a thousand dollars or so in legal
>fees.

Well, a thousand bucks isn't very much. But it was only that much because,
as you say, you LIBELLED the fellow. This is a tort in all 50 states.

>
>You failed to answer my central question about this, so I'll ask again - if
>this had nothing to do with coordination, why, then, was the offer
>repeatedly made to drop the suit in exchange for our coordinating the guy's
>repeater?

I guess he didn't like the way you coordinated him. :-) But notice that he
didn't sue you for that.

He sued you for LIBELLING him.

I have a older Yaesu 2M Handheld (FT23R) that has a cloning feature which allows you to transfer frequencies/offsets stored in memory, to another FT23R via a cable attached between the two radios (connected via Mic / Earphone Jacks.

Does anyone have the details of protocol and signal levels that are used to do this? With this info it should be relatively trivial to write some software to program the HT from a computer.

3912. US Island Awards

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-30 00:00:00 UTC
From: johnn0isl@aol.com
Message-ID: <3qfkhm$s1g@newsbf02.news.aol.com>
Source record: 245560

MSG#221 05/29/95 11:02:57 FROM NL7TB TO ISLDX @USA
SUBJECT: US Islands- way to go!
PATH: N0ISL!KZ7I!N0DAI!MSP0MN!TPA1FL!W3IXR!KA6EYH!WB7AWL!WB7VMS ...

The United States Islands Awards Program (US I) is only nine months old and becoming more popular each day thanks to you! We started US I last September from Whidbey and Fidelgo Islands in Washington's Puget Sound (WA-01S and WA-02S- both IOTA NA-065). So far we have 27 states with islands activated and promises of many more new states "to be on" this summer. Some "firsts" for US I:

1. 1st US Island to US Island QSO....N6IV (Douglas Isl-
and, AK-18S) and N0ISL (Island of Peace, MN-01R).
2. 1st fresh water island to be activated....WA2WZX (on
Grand Island, NY-01R).
3. 1st YL on island DXpedition....KD1VE (North and South
Hero Island, VT-01L and VT-02L).
4. 1st District of Columbia island to be activated....
N4VA (mobile on Columbia Island, DC-01R).
5. 1st home states to be activated by US I BOD....WB4SRH,
N0ISL and KG7RS (Ocracoke, NC-01S..Island of Peace,
MN-01R...Box Island, AZ-02L).

What a better way to celebrate US I's 1st anniversary than to have a contest. Not just any contest, a joint-venture with the Canadian Islands Program (CISA)! This should be an easy way to pick up several islands from W and VE. The 1st Annual W/VE Island Contest starts the 4th weekend of September at 1700Z on Saturday running through Sunday 2300Z. N0ISL is the contest mgr.

Don't forget the new Yukon and Alaska islands that will be on starting June 30th. VY1ISL will be operated by N6IV, KF6XC and NL7TB enroute to the Barren Islands off Alaska's southern coast. The AK operations will start July 4 from Ushagat Island- also new for IOTA!

The "US Island Directory" is available for $5.00 US/Canada or $7.00 elsewhere (C Hadfield, RT 2 Box 2161, Benton City, WA 99320). A very thorough information package about US I, islands activated list and awards info- a must for the serious state island collector!

Problem with the above: hams tend to be traders/sellers/upgraders.
What is the _new_ owner suposed to do about the old owners DL#
enscribed on the gear? And if new owner decides to resell?

Note: I am in favor of marking equipment too, but this is not an
acedemic question: I own such pre-marked gear, but interests change
and I might want to sell/trade this someday.

Or what if MY gear is stolen and then recovered and returned to the
original owner (who doesn't know me at all, and I bought it from
a stores used equipment rack on a cash basis)?

Cheers & 73

The lack of cause doesn't keep people from suing. It happens every day...much more frequently than it ought to. Even if the suit is frivilous, you still have to pay someone to defend against it. It's an inconvenience regardless of how effective it is.

>If you libel someone, as you fellows say you did, that's another matter, of
>course.

We never libeled anyone. The suit was dismissed with predjudice after two years of squabbling in court.

This is a kind of fun thread. I am very interested in hearing these viewpoints on the "vanity" ham plates. Let me throw in another observation - I haven't met anyone yet who is not a ham who knows what my plate is. Invariably, people try to pronounce the darn thing, and mine has a good syllable right there in the second half that simply stumps them. All they can see is "KUZ" like in "hi yawl, seen my kuz hereabouts?" They can't seem to get past that - they fixate on it trying to fit it into some goofy phrase. I'd say it's just an Alabama thing, but there's nobody in this burg who's a native.

Anyhow, I agree with Gary. I have seen some really ingeneious vanity plates, and others that simply make no sense at all. A ham plate means nothing to anyone except hams and those who know a ham.

Does this cost extra in other states? Gee, in Alabama, a ham vanity tag
costs a whopping $3 extra. I imagine the extra paperwork cost me and
my neighbors more than that. Alabama likes hams. They tend to do
neat stuff like save lives and such in emergencies.

Those florescent lightbulbs with the "electronic" ballasts and with
the "Edison" screw base (so it can be installed in incandesent light
bulb sockets) might seem a candidate for bad RFI. I've played with
a few of these things, but they seem pretty quiet. Have I
been lucky, or is this pretty much everyone's observation?

>--
>Robert A. Klahn KE6OQV klahn@netcom.com

Diablo - state park during day (possibly at night when the gates are locked if
you camp in the park...)

Tam - state park, accessible during day

San Bruno - county park, accessible during day

* Warning - all three are RF-dense locations, big time *

Twin Peaks - accessible by road 24 hours (majorly RF-dense both from xmitters
there are from those on Sutro Tower)

Mt. Sutro - If you can bicycle to the top, please let me know how. (My
recollection is tha there's a locked gate.)

Marin Headlands - as previously mentioned, a great QTH IMHO.

Various points in Oakland/Berkeley hills - pull off the road at elevations up
to about 1600, with 180 degree (or more) clear view. 24 hours. Very RF dense
at most (otherwise) attractive locations.

Well to answer the Question of where to buy radios there are
truely two answeres. When you pass your test for what ever license you
wish the FCC usualy will do you a huge favor, the sell your name &
address to thousands of companys. But if you are one of the lucky ones
that this hasn't happened to there are two MAJOR stores : Ham Radio
Outlet & Amateur Electronic Supply.
To answer your second question there are MANY more than just
Icom & Kenwood. There is also Yaesu, Alinco, Standard, MFJ, and a few
others. Personally I like Kenwood & Yaesu. Mostly because they
usually will be on a sale price some where.
Hope this helped.

Special Bulletin 24 ARLX024
From ARRL Headquarters
Newington CT May 30, 1995
To all radio amateurs

SB SPCL ARL ARLX024
ARLX024 SSTV at W1AW

A complete, modern slow scan television system has been donated to W1AW.

The system, designed by John Langner, WB2OSZ, includes his PASOKON TV software, a ''frame grabber,'' a 486 color computer, and a charge coupled device (CCD) camera. His system is described in the cover story in January 1993 QST.

The system, valued at some 2000 dollars, was donated by Norm Creller, W8MPM, who said ''I owe my Morse code skills to W1AW code practice and still monitor bulletins from the station. I wanted to do something in return.'' Creller is a manager at Chrysler Motors in Toledo, Ohio.

The new SSTV equipment is set up for use by visitors to W1AW. They will be able to observe SSTV on the HF bands as well as to send pictures.

>Scott, I have a simple question for you. Should you succeed in your efforts
>to unseat SCRRBA as the frequency coordination body for southern CA, what do
>you plan to do with the existing closed systems?

Scott, I missed the swapmeet. I'll drop you a line to find out a little bit
more about what you plan to do about the coordinating committee. You
certainly have made me curious.

The first group of systems that need to be scrapped are the "paper repeater"
systems. Pairs that have no repeaters but are given coordination. The next
to be targeted are pairs that have repeaters, but lack a user base to support
the repeater use. These are the repeaters that service a couple of handfulls
of users or those repeaters that serve only as an autopatch. IF there are
a significant number in this last catagory, then may be the 440 spectrum needs
to be redrawn to include them. But they should be given a pair for low level
coverage only.

>If your proposed organization is to have any hope of success, it will have to
>serve the trustees of these existing systems in the same fashion you propose
>to serve those wishing to put on open systems. If you do not, then your group
>will be guilty of exactly what you accuse SCRRBA of.

No, I can't agree with you here. The coordinating body should not serve the
trustees. The body needs to serve the ham community. The source of most of
the problems and complaints against SCRRBA are that they serve the needs
of the trustees of the existing systems (the good 'ole boys).

Another big gripe is how much of the band plan is dedicated as closed/private.
Let's look at the numbers for SOCAL, there are ~200 frequency pairs available
with the existing band plan for SOCAL. I've counted the number of open systems
on 440 from Mr. Pagel's directory (1993 - yes I know it is old, but the
number of open systems have not changed that much) are 40 (double what I
thought it was on my previous message). Assuming each of these open systems
don't share their pair with another open system (they do in reality, but
let's assume they occupy more real estate than they really do) that would
mean that 20% of the 440 spectrum is open for SOCAL!

I really think the 440 spectrum has to be re-drawn. There has to be a
distinction between high level coverage and low level coverage. Another
part of the amatuer community that has been virtually ignored on 440 are
those that work simplex. Currently the only frequency that can be used
for simplex is 446 and 446.5.

As for that to do with the closed systems that now sit on those frequencies
they will simply have to re-apply for their coordination. I know this

may look good on paper only. But if we get into the issues of law suites and damages, then all I have to say is THIS IS ONLY A HOBBY. And the point of that licensed operators are not suppose to profit out of this. I suspect most of those that will balk at this are actually profiting out of hobby. If you don't like what is being then I will give you the same bit of advice someone else gave me when I balked at the number of closed systems on 440. SELL YOUR EQUIPMENT and GET OUT OF THE HOBBY.

3940. IC-551 rig problem

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-30 00:00:00 UTC
From: jwprice@unity.ncsu.edu
Message-ID: <3qfbmm$b2k@taco.cc.ncsu.edu>
Source record: 245588

Our Icom IC-551 6m rig is stuck on 50.100 MHz and won't tune to other frequencies.

Icom said the problem may be the main CPU, but if so that part is out of production so the rig can't be fixed. (Apparently this rig doesn't have a battery, so it's not a lost memory problem.)

If anyone else has experienced this problem or can point me to someone for advice, that would be great.

3942. TM541A COR Question

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-30 00:00:00 UTC
From: Chris Oesterling <chris@angus.mystery.com>
Message-ID: <m4aX6c1w165w@angus.mystery.com>
Source record: 245590

KENWOOD TM541A COR QUESTIONS

Please help I'm really stuck! I'm putting together a 1.2 GHz repeater
using a pair of Kenwood TM541A radios. I know the TM241A and TM441A
are similar. I have two questions:

My CAT-300DX repeater controller manual indicates I need the COR from
the rx radio with < .9 volts when no signal received and > 3 volts
when the receiving singal exists. I can't seem to find the positive going
voltage, any ideas where I can get this?

I'm getting the discriminated audio from the connector going to the
CTCSS module in the radio. Is this the best spot to get the audio?

Thank you, thank you, thank you for the help!

First of all Bubba: You are breaking the law big time.

1) It is illegal to hook a CB to an amp $5000 fine

2) It is illegal to use a ham radio with out a license 6-month jailed
Go back to radio and tell that guy that he is giving out wrong
information about ham radio.

3) If you are a jammer $25,000 fine

4) CB amps will not work with ham radio, because CB works on AM and ham radio works on FM.

The FCC can catch you if they want, and they will when you start mess around with ham radio. My advice to you is become legal, get your ham license, it is easy to get. Learn about ham radio from clubs in your area.

Remember big brother is watching you.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 MAY AND FORECAST FOR 31 MAY - 02 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 29 May
Daily Proton Fluence >1 MeV: 1.8E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 7.2E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
31 May 01 Jun 02 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 31 May: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 29 May
Learmonth 24 2344 5443
Fredericksburg 27 8
Planetary 35 7

Observed Kp for 29 May: 2222 2232
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
31 May 33 Active to minor storm
01 Jun 30 Active to minor storm
02 Jun 25 Active
COMMENT: IPS Geomagnetic Warning 15 was issued on 26 May and is
current for interval 29 May to 5 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
30 May normal normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
31 May normal-fair fair poor-fair
01 Jun normal-fair fair poor-fair
02 Jun normal normal-fair poor-fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
30 May 25 near predicted monthly values, with spread F observed
during local night.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
31 May -10 About 15% below predicted monthly values
01 Jun -10 About 15% below predicted monthly values
02 Jun -5 About 10% below predicted monthly values
COMMENT: IPS HF Communications Warning 18 was issued on 26 May and is
current for interval 30 May to 5 June. Obs Townsville MUFs: near
predicted monthly values. Obs Hobart MUFs: near predicted monthly
values, spread F observed during local night.

>No one could be that STUPID,

Here is a rec.humor.funny posting from several years back that
provides some evidence to the contrary:

==========
From: jcox@x102a.ess.harris.com (Jamie Cox)
Newsgroups: rec.humor.funny
Subject: Ham Radio for the compleat idiot.
Keywords: true, smirk
Message-ID: <S189.1de6@looking.on.ca>
Date: 14 Sep 90 23:30:05 GMT
Lines: 53
Approved: funny@looking.on.ca

The following is an actual letter. The original
was typewritten, and all spelling and grammar has been carefully left
intact, including errors. I thought this was pretty funny.

To Mr. (name omitted)
District Manager for Alabama
Radio Shack
3300 N. Pace Blvd
Pensacola, FL. 32505

Dear Sire,
This letter is complain about the problems I have having with the ham radio
model number 19-1101 I had got from your company Radio Shack. I had this
shipped special to me from your store 1096 Eastdale Mall Montgomery
Alabama. I was got this because I think that i would get transmitt furthur
that I did with the TRC 217 40 channel walkie talkie.

The problem that had first was when I was going to hook this radio
HTX-1000 to the antenna the conektor on the radio was wrong it wouldn't
attach to my cable. I was able to hook it finally by making a small change in
in the connektor. As soon as I tried to use it there was no sound coming
at all. This happened for two days and I never did get to talk to anybody
the whole two days. That day the cable company came knocking my door and
said there was something causing problems at my house and disconnekted my
radio from the cable line. you knew when i brought the Radio that I was
going to use that for my antenne. You didn't tell me not to why not?

Next time I decided to put the HTX-1000 in my automobile I thought I would
see how it worked their. I hooked it to my CB-antenna and at least I
could hear people. But what happens now is no one wants to talk to me because

they says you have to have a licencs to talk to them. Why? I dont have to have a licencs to talk on my CB. They'll talk to me there. Anyhow it dont matter much anymore because somebody done took the radio HTX-1000 from my automobile.

What I would like for you Radio Shack to do is refund my money because I don't have the radio anymore and its not my fault i dont and I think you should give me back my money. Also the cable company here says that I hurt something in there line and want to be paid fix it. It will cost $27482.98 to fix the equipment they say was damaged because you didnt tell me not to hook it to the cable. Please remit to me the check for $27758.53 for damages due. To save this matter from going to court the check must be in my hand by June first or I will turn this over to my attorneys of law.

Thank you

Who are today's professionals in electronics? They hold either a
BS or MS in EE, so they've got at least 4-6 years of formal training,
plus continuous on-the-job training. All the textbooks each has studied
from couldn't be lifted by one person.

Now take the lowly mathematician or baker or plumber with only a self-
taught electronics backround. You're fooling yourself if you think
this `amateur' is able to complete on a level that is even close to
the above `professional'. If the difference between the two was
just a matter of one of them receiving a salary, then we wouldn't see
corporations requiring the BS or MS - they'd be hiring the amateur
who has demonstrated only a love of the work.

Those of you whose daily duties place you on the `cutting edge' of
electronics would shutter at the thought of working with a colleague
whose only training was self-taught. Look around at your fellow
workers - dare I say they've all earned at least a BS? (An EE BS from
this university now requires a 5-year stay.)

Am I ducking my responsibility as laid out in $91.1? Nope, for I
am advancing my own SOTA. The solder flows daily on projects that
are continually more challenging to me. Whether you'd be challenged
by them shouldn't matter, for our backrounds might differ vastly.

: I have had two radios (VHF) stolen.

: My suggestion would be, use a slide mount (don't use the antenna or power
: connections) so removal can be easy when you leave it at night. Also, lock
: your car. One would think after losing two rigs, I would learn. RIGHT!

Of course, locking the car will probably result in a missing radio *and* a broken window. I take the approach of leaving nothing in the car and leaving it unlocked so they can easily find out that there is nothing worth stealing and move on to the next car. Of course, this only works for my 1978 GMC pickup (there are a few tales about my truck!). :-)

That is correct! I have a brochure the State of Illinois puts out about ham plates. The renewal sticker each year after you get the plates is the same as for any other ordinary plate.

I have had ham plates for about 20 years now and have never had any sort of break-in or tampering with my car yet. I don't leave the equipment where anyone can get at it when I'm not there either, if I plan on being out of the car for more than a few minutes. But I haven't seen any signs that anyone has tried to get into it.

The Fox River Radio League (FRRL) located in Batavia, IL is in the process of activating a New Explorer Post specializing in Ham Radio. At our recent Scout-A-Rama as the introduction for the post we operated on 10 Meters (which opened for about 15 minutes, and a 2 meter Packet station. The demonstration was well received and it proved to some that scouting is a good way to increase the missing youth in Ham Radio. Best of luck to all other Scouting (Boy Scouts or Explorers) groups that are pursueing this area.

3957. FCC: Getting better at something, by golly!

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-31 00:00:00 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.801939592@melpar>
Source record: 245489

Well, folks, as much as I like tossing insults at government agencies, I'll have to admit that Ye Olde "Friendly Candy Company" has shown some improvement in administrative matters pertaining to licenses, to wit:

a) My recent upgrade took two weeks from exam to new license in hand; I took the test on a Saturday, and got the license in the mail the second Saturday thence. Allowing for delays by the VE team and the U.S. mail, that's a darn sight better than I ever expected.

b) The new FCC on-line database (and "hotline" number) is a terrific idea. Newbies will love being able to get on the air almost immediately rather than having to endure weeks (months?) of waiting like we did in the "good old days."

c) I like the current license format *very* much. Very clear and easy to read (no "faded printer ink"), and the wallet-sized version is *truly* wallet-sized and fits easily into one of those plastic insert pockets.

d) The 5" x 7" version (suitable for framing) is also nicely done, especially the callsign in easy-to-read larger print prominently displayed and centered.

e) A "consumer warning label" - what a concept! Imagine the FCC actually *recommending* lamination and *warning* the licensee that the laser-printed information "may become detached under certain conditions" (like, sticking to a plastic wallet insert? You bet it will!).

A self-adhesive, clear plastic laminate sheet from the local office supply store (42 cents for an 8.5" x 11" sheet) made lamination a piece of cake. RECOMMENDATION: Cut out the license, fold it in the middle, then laminate each outside face separately and trim flush with the edges of the license. The folded license fits neatly in a plastic wallet insert, the printed faces are fully protected, and the license can still be unfolded to read the "Conditions of Grant" on the back side.

All in all, a very pleasant surprise. Of course, even if they'd written it on toilet tissue with a magic marker I wouldn't have been inclined to send it back..... ;-)

IA>I just got a new HXT202 for Rad Shack and have picked out a call sine for
IA>myself and gotten on the air. I have been having alot of fun. It is just
IA>like CB but I can talk alot farther. I wanna hook my Rad Shack HXT to my
IA>CB linear amplifer and then to my TV antenna. Can somebody tell me how to
IA>do this. I hve a flat wire going from my TV to the antenna. Do I use the
IA>same kind of wire to go from my HXT to the linear.

IA>Also the guy at Rad Shack said he put some repeater chanels into my
IA>radio. Can someboby please tell me what a repeater is and what it does.

IA>Also can I use my cb handle or do i have to makeup another one. The guy
IA>at rad shack said to just makeup a call sine.

IA>Also when I get my linear and TV antena hooked up will I be able to talk
IA>to and hear people in other countries and if so on what chanel. My Rad Shack
IA>HXT
IA>has 20 chanels I think. Which one do I use to talk to somebody in another
IA>country.

IA>Also what chanel do the other truckers hangout on. I tried all 20 chanels
IA>and cant find them. I even tried chanel 19 but there was no one there.

IA>Thankyou for all of the help. I hope to talk to all of you on the air.

IA>Keep the rubber side down. Catch you on the flip side.

>I just spent two weeks in a cabin in the woods that had florescent
>bulbs and found that they were only noisy in certain frequency ranges
>(2-4 mhz was all noise). But otherwise, they were very RF quiet.

Interesting. The noise may have been coming from the invertor. I've
been running CFs of the magnetic-ballast variety (the inexpensive GE
ones mostly) for years without problems on the 75m and 160m amateur
bands. Such hash as there is is definitely coming from my Trace
Engineering invertor. If I run the house on the genset and shut the
invertor down, the hash disappears.

I've been thinking about building a filter to get rid of it, but how
to handle the potential 20+ amps of AC safely while getting rid of the
hash is a sticky point.

>h.f.?

I'm talking about the GRAPES RF modem, of course. It operates on
10 meters (normally driving a VHF/UHF transverter, but it can
work with an antenna too). The baudrate generator is programable
via a DIP switch to lower than 56 kb rates, though to actually
get down to 45 baud (60 WPM) would require a crystal change or
an additional divider stage. The MSK modulation used would yield
a 63 Hz spectrum at 45 baud. Since the modem is the radio, it
could operate this way on 10 meters, and the modulation is legal.

Note that standard 45 baud RTTY occupies 249 Hz bandwidth while
60 WPM Morse would occupy 250 Hz bandwidth (due to the keying
sidebands). The 63 Hz bandwidth of the MSK signal can offer a
considerable SNR benefit. And the coherent signal recovery
can offer an even larger SNR benefit. While this modem isn't
optimized for this low speed, and there are better modulations
one could use for HF conditions, it is an existance proof of
a fairly high perfromance digital radio that's nearly as simple
and cheap as a QRP CW transceiver.

>one makes an autopatch call?

Terminate the connection immediately. Transmission of music is
specifically prohibited except for a couple of very limited
exceptions, and this isn't one of them.

Basically, the exceptions are, when retransmitting NASA Select,
and when the music is extraneous, such as a band playing in the
background at a parade while you are making a transmission and it
just happens to be picked up behind your voice.

>been lucky, or is this pretty much everyone's observation?

They're tolerable if you use an outside antenna and/or if you're listening
to the UHF/VHF frequencies on a scanner, but I've had several
brands over the years and all of them cause a substantial amount of
interference if you operate a portable shortwave receiver (in my case,
a SONY 2010 and Yupiteru MVT-7100) on its whip antenna within 10 feet or
so of the lamp.
I'm a big fan of compact fluorescent lamps for their energy conservation,
but I have to turn it off if I'm using my portable receiver next to it.

>Scott, I have a simple question for you. Should you succeed in your efforts
>to unseat SCRRBA as the frequency coordination body for southern CA, what do you plan to do with the existing closed systems?
>If your proposed organization is to have any hope of success, it will have to
>serve the trustees of these existing systems in the same fashion you proposeto serve those wishing to put on open systems. If you do not, then your groupwill be guilty of exactly what you accuse SCRRBA of.

Please go away with all these assumptions.

I clearly stated in my mission statement that we will coordinate repeaters on the dozens of "PAPER" repeaters that SCRBBA maintains so they can continue their stronghold on the 440 spectrum.

If there is coordination without a repeater providing two way communications (or a repeater at all) then there is NO coordination at all.

last updated May 7, 1995 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@ihlpf.att.com. Thanks to Dennis Dale and ARRL for providing information.

JUNE

June 4, Sunday: Princeton, IL - Starved Rock Radio Club. Bureau County Fairgrounds. Princeton is exit 56 | on I-80. Admission $5. Talk-in 146.355/955. Info, Bruce or Debbie Burton, KU9A (815)795-2201. Big ham- | fest, with plenty of parking and fair restroom facili- | ties.

June 11, Sunday: Willow Springs, IL 6 Meter Club Ham- fest, Six Meter Club of Chicago. Santa Fe Speedway, 91st Street and Wolf Road. Admission $5. Gates open 6AM. Talk-in on 146.52 simplex or 146.97 repeater. Info, call Joe Gutwein, WA9RIJ, at (708)963-4922. | Traditionally filthy restroom facilities.

JULY

July 9, Sunday: Willow Springs, IL - DuPage ARC ham- | fest, Santa Fe Speedway, 91st Street and Wolf Road. | Commercial & flea market setup at 6 AM. Admission $5. | info: call (708)985-9256. Talk in on 145.25 MHz with | 107.2 PL. (-600). This hamfest used to be held at the | American Legion in Downers Grove, then in Stickney, and | was a good small to medium-sized hamfest. Santa Fe | Speeway has traditionally filthy restroom facilities. |

July 23, Sunday: Sugar Grove, IL - Fox River Radio League (FRRL) Hamfest, Waubonsee Community College, Route 47 at Harter Road, 5 miles NW of Aurora, IL. Set up Sat 7 PM, Sun 6-8 AM, open to public 8 AM. Commer- cial dealers, flea market, computer vendors, refresh- ments. VE session: 10 AM (bring original license, a copy of license & photo ID). Free parking, camping nearby. Talk In on: 146.58/147.66. Adm: adv $4, door $5. Table: 8 ft $10. For advance tickets and informa- tion contact: Fox River Radio League, Box 673, Batavia, |

IL 60510-673 or call Small - medium hamfest with good | restrooms.

AUGUST *

Aug 6, Sunday: Peotone, Il - Hamfesters Hamfest Will | County Fairgrounds, Peotone, Il. Take I-57 South to Peotone Exit 327 (East). Flea market open 6:00am - 3:00pm. No additional charge for flea market space. | Admission $5, kids under 12 free. For advance tickets and information contact: Hamfesters Radio Club, Box 42792, Chicago, Il. 60642 or call Amateur Radio Info-Line: 1-708-535-AHAM more info: Robert Truhlar, W9LNQ, 1701 W. 101st St., Chicago, IL 60643. 312-238-0544 | Medium large hamfest with fair restrooms.

August 27, Sunday: Woodstock, IL - Tri-County Hamfest, Sponsor: Tri-County Radio Group, Inc. McHenry County Fairgrounds, Rte. 47 Junst North of Rte. 14. (Only 14 miles North of I90 on Rte. 47.) 6 AM - 3 PM. Advanced Tickets: $4.00, At The Door: $5.00 For advance tickets send check to: T.C.R.G., P.O. Box 3107, Skokie, IL 60076-6107 Information: 708-658-1678 Talk in on: 146.52

August 27, Sunday: Danville,IL - Vermilion County ARA. info: Gary Denison, KA9SKS, 14704 E. 2750 N. Rd., Danville, IL, 217-759-7389

SEPTEMBER

September 10, Sunday: Joliet, IL - Bolingbrook ARS Ham/Computerfest, Inwood Recreation Center, 3000 W. Jefferson. This is a medium size hamfest with indoor/outdoor flea market. Gates open 8 AM for general public. Outdoor flea market on paved lot -- setup at 6 AM. Use Exit 253 from I55, or Exits 126/130 from I80. Admission $5. VE testing 9 AM - 12 noon. Bring original license and photocopy, ID and photo ID, plus $5.95 test fee. Novice-only tests are free. Talk-in 147.33, 224.54, and 443.525 MHz repeaters. Indoor table reservation, call Ed Weinstein at 708-085-0527. Info, BARS Hotline (708)759-7005 between 6 AM and 9 PM. | Small - medium hamfest with reasonable restroom facili- | ties.

COMPUTERFEST SCHEDULE

Feb 12, Sunday: Dolton, IL - Computer Show Dolton Expo Center, 14200 Chicago Rd. 9:30 AM - 3:30 PM. Adults $6, Kids $2. Call (708)974-3123 for info.

March 5, Sunday: Dolton, IL - Computer Show Dolton Expo Center, 14200 Chicago Rd. 9:30 AM - 3:30 PM. Adults $6, Kids $2. Call (708)974-3123 for info.

Computer Central, College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

1995 Show dates
Jan 22
Feb 26,
Mar 26 (at Harper College)

From: gsparks@ix.netcom.com
Message-ID: <3qiond$nrv@ixnews3.ix.netcom.com>
Source record: 245501

In Texas you can get HAM plates for all your vehicles, easy to remember your plate number in any of your vehicles.

One warning I was given, If your plates or car is stolen, then you will likely be harrased and possibly jailed driving the vehicle with the other set of plates. Depending on the city this could also mean physical abuse.

I have had plates for many years, lots of antennas, and have never been broken into. I have parked the car in the same lot where several other cars were broken into, but mine was left alone. All of my neighbors cars were hit one night, but mine was left alone, that was tough to explain.

Either the theives we have know that it is difficult to sell Ham equipment, or they think surely a car with that many antennas and the odd plate is FBI or CIA, and leave it alone.

I also always call any car on the road with Ham plates on .52 simplex and have had several enjoyable commutes. I think the pros outweigh the cons.

While the idea a thief could see your tag and lookup the address, I don't think that is an issue, Now telling everyone on the local repeater you are going on vacation for 3 weeks and won't be around to visit is another story.

Almost any scout leader would be thrilled to have you offer your station to use for the Jamboree on the Air JOTA.

I have been contacted several times to help the scouts communicate on this event.

One year I set up a station at a group campout and was able to demonstrate to several Packs of Cub Scouts.

A lot of fun, I think the information on the event is in this months QST, if not, it will be in July's.

Well, for one, I consider this "incidental" music. Read part 97. This is not
broadcasting music.

>Terminate the connection immediately. Transmission of music is
>specifically prohibited except for a couple of very limited
>exceptions, and this isn't one of them.

Read the exceptions, and I think you'll agree this is a grey area.

>Basically, the exceptions are, when retransmitting NASA Select,
>and when the music is extraneous,

Music on hold could be considered extraneous, since you are not broadcasting
music intentionally.

Just my opinion, and also because I haven't started any good debates on
here lately.

>neat stuff like save lives and such in emergencies.

Here in sunny Alberta, ham plates are a freebie. Considering the price
of vanity plates (around $100) that's a tough deal to beat.

I'm especially happy about it because I got a front & back plate when
I applied 5 years ago. Nowadays one's only required to carry plates
on the rear of a vehicle, so I have a spare plate to go on the front
of another car (should I ever get one, instead of buying gear!).

regards,
Ross ve6pdq

ps: and yes, 99% of the population haven't a clue. That includes the
Mounties, too. I sure got an odd look when one of them asked, and I
said (without any pause for thought) `victor echo number six pappa
delta quebec'. That isn't a possible commercial or private plate
value around here, and I think he figured I was shitting him.

jlsny@nyc.pipeline.com (Jacob Stockton) writes:

>4) CB amps will not work with ham radio, because CB works on AM and ham
>radio works on FM.

First, I think Jacob's had his sense of humour surgically removed. Go back and read the base post if you don't understand what I'm saying. Lighten up, Jacob :).

Second, an AM-capable amplifier must be linear (of course, if it's a CBer's bootleg amp, all bets are off :), and will handle FM just fine. It's an FM amp (ie, a class-C amp) that can't handle AM. The reason an 11m amp won't work on 2m is that it just plain isn't designed to go up that high.

Third, while I got a good grin out of the Bubba post, I kind of wish the trolls would restrict themselves to 1 April or thereabouts, or else be *totally* outrageous so everybody knows it's a joke.

yes, the Internet address for the FCC at Gettysburg is:
ftp ftp.fcc.gov/pub/XFS_AlphaTest/amateur.(case sensitive)
You can download the entire database that expands to 134 megs or start
checking the daily entries that go in each day at approx. 2310 EDT.

I had some difficulty importing the daily update into my database but my
windows based spreadsheet did just fine after some tinkering.

It took two weeks for my name to appear in the database and another week
for the ticket to arrive in the mail.

Good luck and 73

3981. Re: ? Open 440 repeaters in SoCAL ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-31 00:00:00 UTC
From: dgorevin@mblues.stat.com
Message-ID: <N21y6c1w165w@mblues.stat.com>
Source record: 245513

I have stayed quit on this issue for some time now but I can't stand it any more.

It appears that some group is going to put up an uncoordinated repeater on a frequency already coordinated to another group that does not have a radio on the air. Thus the frequency is vacant and someone wants it and they believe they have priority.

So lets say that a new coordinating body is created.

1. "Paper repeaters" will be the first to go. Personally I have been pushing that aspect of coordinating for several years in AZ. And with some sucess.

2. Then it's on to the repeaters that have few users. This is the best idea yet. All those backyard machines that have a 20 mile radius of marginal coverage. That was put up because someone just got their license and they feel they too, need to here the call sign in lights.

3. Then we are on to the "closed" radios. even if it is an established system with 3 radios on the same frequency pair. It's amazing that a group would have enough technical expertice to co channel share with themselves and have very minmum overlap. I would say that is very good usage of a frequency pair. So if a closed group must reapply then be rejected because they are closed. Then they can't be a member of your group. Because they do what you just did to them

So from all this hashing around in this thread for past couple of weeks. I have determined that it is OK to put up a noncoordinated repeater because you feel that you need to. And you can make life miserable for the exsisting coordinating body because they don't think the way way you do.

What it really boils down to is the Have's and the Have not's. Would you anyone allow Joe Blow off the street come into your house any time day or night and use you station. I don't think so. Why would you let him use your station that is a long ways away and cost you alot of time and money. You must have control of what happens on your station. Why. Because you are responsible, remember your call sign is on it.

The FCC has repeatedly implied or stated that all repeaters are "closed". Even WA6ITF and crew mentioned it on Newsline so it must be so. I have never heard the FCC say anything like -let anyone use your station

This profit thing is hogwash. Obviously those who are saying that closed repeater/remote owners are making money has "NEVER" been directly involved in the operation of a repeater/remote. Even "open repeaters need electricity, building space (not always free ya know.), new antennas after

the summer storms, new antennas after the winter storms, and new antennas. How about gas money to drive that 3 hours one way up the freshly graded mountain road. The divorce lawyer because you made one to many all weekend trips to put up that new site. (just kidding I hope)

The closed radios are generally located at the better sites. Why? Because the they own the building, know the owner, work for the owner. If you make the closed radios go away. An open radio may or may not be able to take it's place at the same site. So you can end up with 20 backyard repeaters on the pair. But alas if we refere back to item #2. They will have few uses and be told to shut down.

Not all closed groups are neccesarily closed minded. The groups that I am involved with take on several new members a year. But we are careful as to who we bring in. In addition my groups support several open repeaters. They are completely supported by time and donations from the members. If the closed radio must go. So do the open ones. Oh, and these wern't just backyard repeaters.

>ARRL, rather than send it to my State's Department of Motor Vehicles.

Except that, in California, you do not spend an extra penny in the
yearly resistration fees for having an Amateur Radio plate.

There is an initial fee of about 20 bucks (when I got mine) to get
the plates pressed, and thats it; they never bother you again.

In a little while, when my Lifetime membership due matures, I won't
have to send yearly offerings to the ARRL, either. Imagine, a lifetime
access to the QSL bureau for next to nothing!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 31/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 31 MAY AND FORECAST FOR 01 JUNE - 03 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 30 May
Daily Proton Fluence >1 MeV: 7.1E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.2E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Jun 02 Jun 03 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Jun: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 30 May
Learmonth 22 3244 4533
Fredericksburg 22 31
Planetary 25 36

Observed Kp for 30 May: 2456 5444
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Jun 30 Active to minor storm
02 Jun 25 Active
03 Jun 20 Active
COMMENT: IPS Geomagnetic Warning 15 was issued on 26 May and is
current for interval 29 May to 5 June. Coronal hole induced
geomagnetic activity in progress.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
31 May normal fair fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Jun fair poor poor
02 Jun fair poor poor
03 Jun normal fair poor
COMMENT:Degraded HF comms can be expected at mid-high lats due
to continuing geomagnetic activity. Conditions should ease after
2 June.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
31 May 4 were depressed 15% during daylight hours and slightly
enhanced during local night.

Predicted Monthly T index for May: 15
Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
01 Jun -10 About 15% below predicted monthly values
02 Jun 0 About 10% below predicted monthly values
03 Jun 0 About 10% below predicted monthly values
COMMENT: IPS HF Communications Warning 18 was issued on 26 May and is
current for interval 30 May to 5 June. MUFs at Townsville were near
predicted monthly values, with some mild spread F observed just before
dawn. MUFs at Hobart were depressed 30% during daylight hours, with
spread F observed during local night hours. Spread F was also observed
during local night hours at Sydney. Northern Australian region
communicators should continue to use the monthly T-index of 20.

A friend asked me this the other day, and I didn't know
the SPECIFIC answer...

Someone decides to hit a series of buttons on their DTMF
keypad, the effect of which is to transmit a facsimile
of "Mary Had a Little Lamb" over the airwaves.

Is THIS specifically (or generally) illegal?

I would THINK so, but it's not "music" in the pure
sense of the word.

jsoohoo@netcom.com (John Soo-Hoo) writes:

>I really think the 440 spectrum has to be re-drawn.

According to my Henry Radio/Icom/Gordon West band-plan chart (in color!) here's the frequency assignments for the 70cm band; maybe you folks need to re-evaluate these assignments and push for rptr allotments in the under-utilized segments:

420-426 ATV rptr or simplex w/ 421.25 MHz video carrier control links and experimental

426-432 ATV simplex w/ 427.25 video carrier

432-432.07 EME

432.07-432.08 Propagation beacons (old band plan)

432.08-432.10 Weak-signal CW

432.10 70cm calling freq

432.10-433 Mixed mode and weak signal work

432.30-432.40 New beacon band

433-435 Auxiliary/rptr links

435-438 Satellite only (internationally)

438-444 ATV rptr input with 439.25 video carrier and rptr links

442-445 Rptr inputs and outputs (local option)

445-447 Shared by auxiliary and control links, rptrs and simplex

446.00 National simplex freq

447-450 Rptr inputs and outputs

Maybe the rptr folks can `borrow' some of that 18 MHz the ATV folks have alloted to them.

73 from Hawaii,
Jeff NH6IL

>Were these the PIE desserts, or the CAKE desserts?

If you're going to conduct spelling flames then first learn how to spell `forties' - your previous post regarding my age contained the word `fortys'. Writing your own dictionary, Brian?

And why the flames? I really don't even know who you are or what you stand for. I don't recall ever confronting you or reading anything you've written. You've made as much an impression upon me as the gecko climbing up my office wall. If my opinions bother you then confront them then rather than letting your blood boil for weeks or months. Better yet, get out an exercise in that San Diego sunshine - it'll lower your blood pressure *and* reduce some of that fat!

Take care buddy,
Jeff NH6IL

3997. RTTY is alive and doing well

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-31 00:00:00 UTC
From: colin.davies@dse.mpx.com.au

Source record: 245529

Reference the message dated 20th May 1995 from Todd Little and the
reply dated 22nd May 1995 by Tony K4KYO.

I do agree with Tony and thank him for putting it in better words than I
could have. Ham Radio is many things to many people, if you like to
experiment with new modes all power to you, I think thats great, but
please allow those of us who like to use the older modes to do so,
as and when we wish.....after all, most of the new modes have been
developed from the older modes...its like modern cars, we would not
have them if the early pioneers had not done the hard work...
I first used RTTY in 1948 while a member of the R.A.F. and a lot of
ham stations I communicate with have also learned to use RTTY, ARQ
CW etc serving with their countries armed forces...perhaps we are just
re-living the past, but the fact is, we like it...and it doesnt mean
we dont use the newer modes, a lot of us use packet pactor and clover
as well as the internet....one more thing most of us who use RTTY have
at least one piece of equipment that we built ourselves....
good luck to all from
Colin Davies VK2CTD
President of the Australian Amateur Radio Teleprinter Society (ANARTS).

P.S. Could I please take the opportunity to remind all interested in
Digital modes that our (ANARTS) World-Wide RTTY contest will take place
in a few days time. The contest period is 0000utc saturday 10th June
to 0000utc monday 12th June (48 hours)...You can use RTTY, Amtor (FEC
or ARQ) Pactor or Clover....If you need the contest rules please send
me a message and I will gladly forward them on via this mode...
you can send your logs in by Sept 1st 1995 to our contest manager
Jim Swan VK2BQS P.O. Box 93, Toongabbie New South Wales 2146 Australia.

For those interested, Toongabbie is an old Aborignal word meaning
The Watering Place and was the third town to be settled in Australia
after Sydney and Parramatta (The place of the Eels).

This subject should be moved to the Scanner newsgroup. To give you a basic answer, the laws vary from state to state, but all have to do with either a carring a portable scanner or having one in a vehicle. There are no laws, (or enforceable ones, that is), preventing your monitoring from a house or hotel room.

Couldn't find you email address in your post.

Under normal circumstances, music on hold via the autopatch would violate 97.113.

There are two exceptions: The incedental retransmitting of music from a government station when retransmittingon amateur frequencies is authorized (i.e. space shuttle transmissions). And under conditions covered by the infamous sections 97.403 and 97.405 - if your local emergency service uses music on hold when you are calling in an emergency I wouldn't worry about it. "Thank you for call 9-1-1. Your call is very important to us. Please stay on the line and your call will answered in the order received..."

If you are calling your spouse at work (just as an example) and get M.O.H., it would be appropriate to stop it by tranmitting over it (but how do you know when someone answers?) or disconnecting the patch.

If you're stranded on the freeway with high speed traffic, you call AAA and they put you on hold with M.O.H., I wouldn't worry too much about it - but you might take advance steps to avoid it like asking not to be placed on hold. Being stranded on the freeway is an emergency, although not an exceptional emergency condition. You and your local officials would probably like it handled as fast as possible. In this area AAA uses M.O.H and it is not uncommon for hams to ask not be placed on hold.

In black and white...no music under routine conditions.

I have an experimental WWW page for submitting NTS (National Traffic System) radiograms. If you have a browser capable of forms and would like to give it a whirl and send a radiogram to a friend, see:

http://www.columbia.edu/~fuat/cuarc/radiogram.html

For now, until I get some "legal opinions" this is limited to U.S. senders and U.S. recipients (plus to any country with which the U.S. has third party agreements).

Also, if the volume gets unmanageable I reserve the right to discontinue the experiment.

A friend bought the 2 meter (145 MHz) handheld transceiver (HT)
from Radio Shack. This HT has the problem of jamming the TV when he
transmits full power with a 5/8 wave vertical antenna. I suggested
adding a filter to the TV. But it didn't work. I would appreciate
any help and suggestion in solving this problem?

Btw, I tried transmitting with my Icom 2GAT (7 watts) with different
antennas right next to my TV with no bad affected. I guess Icom is
just good with harmonic suppression.

Cheers & 73, Harry/AA2NO

>in order to have fun with your own.

Yeah it would be fun, but do we have for simplex frequencies? 446 & 446.5 and that is all. All other frequencies are dedicated to repeater use only. Do you really believe those two frequencies are enough for everyone in SOCAL to use for simplex?

4011. My Smokin Radio!

I tired what you said and here is what happened.

When I keyed up the mike on my CB a very loud buzzing noise came out of the HXT202. I talked into the CB and could heer myself on the HTX. It was pretty cool until the smoke started coming out. Smoke came out of my HXT202 and it stunk really bad so I unhooked all of the stuff. I think that maybe I did not do something right. Now my HXT202 does not work and smells reely bad. I am going to take it back to Rad Shack and tell them what happened and see if they will give me a new one. It is only one week old and should not burn up after only a week. A firend of mine says that maybe the CB linear was to big and that is what caused the thing to burn up. I hope that Rad Shack will get me another HXT. When I get the new one, I am just gonna hook it to my TV antenna and forget about the linear.

Keep the rubber side down and watch out for Smoky Bear.

Bubba

This is what I tried.....

>> 1. Leave a CB transceiver hooked to the amplifier's "Transmitter"
connector
>> in order to provide a 50 ohm load and prevent oscillation.
>>
>> 2. Connect the "Antenna" connector of the amplifier to the "Antenna"

jsoohoo@netcom.com (John Soo-Hoo) wrote:
>The first group of systems that need to be scrapped are the "paper repeater"
>systems. Pairs that have no repeaters but are given coordination.

I agree with you on this point. There should be a way for systems that are not on the air to have their frequency re-assigned to the next person on the waiting list. If there is not already a mechanism to do this, I believe SCRRBA should develop one.

>The next
>to be targeted are pairs that have repeaters, but lack a user base to support
>the repeater use. These are the repeaters that service a couple of handfulls
>of users or those repeaters that serve only as an autopatch. IF there are
>a significant number in this last catagory, then may be the 440 spectrum needs
>to be redrawn to include them. But they should be given a pair for low level
>coverage only.

This is where problems will develop. You are making a judgement call as to who is "more worthy" of a channel. I agree that radios that have little use should be sharing frequencies, it is quite difficult to implement this as a frequency coordinator. No matter what criteria you use, it has to be fair to all, even the guy that has that private autopatch. Making judgement calls will get you in trouble.

>No, I can't agree with you here. The coordinating body should not serve the
>trustees. The body needs to serve the ham community. The source of most of
>the problems and complaints against SCRRBA are that they serve the needs
>of the trustees of the existing systems (the good 'ole boys).

There is a difference between simply coordinating frequencies to minimize interference, and spectrum management--making the best use of those frequencies. Coordination is almost entirely technical in nature. Spectrum management is mostly political in nature. It looks to me like SCRRBA has done frequency coordination pretty well, but has not addressed the larger spectrum management issues.

If a frequency coordinator doesn't serve the existing systems by keeping interference to a minimum, that coordinator will then be attacked from both sides. Right now, SCRRBA is only being attacked by those new hams who want to put a repeater on the air in a band that has been full (at least by SCRRBA's definition) for 20 years.

>Another big gripe is how much of the band plan is dedicated as
closed/private.
>Let's look at the numbers for SOCAL, there are ~200 frequency pairs available
>with the existing band plan for SOCAL. I've counted the number of open
systems
>on 440 from Mr. Pagel's directory (1993 - yes I know it is old, but the
>number of open systems have not changed that much) are 40

The decision to make a system closed is entirely made by the owner of that system. The frequency coordinator doesn't care either way. It is always the right of the repeater trustee to determine who can and who cannot use his station.

>I really think the 440 spectrum has to be re-drawn. There has to be a
>distinction between high level coverage and low level coverage.

This is another good idea, if you can find a fair way to administer it. I would be surprised if there weren't some kind of sharing plan used by SCRRBA already. I know there are several groups in CA that reuse frequencies heavily within their own systems. Do you know what the criteria is?

>Another
>part of the amatuer community that has been virtually ignored on 440 are
>those that work simplex. Currently the only frequency that can be used
>for simplex is 446 and 446.5.

The amateur band is from 420-450 MHz. I'm sure there is plenty of simplex space below 440.

>As for that to do with the closed systems that now sit on those frequencies
>they will simply have to re-apply for their coordination. I know this
>may look good on paper only. But if we get into the issues of law suites and
>damages, then all I have to say is THIS IS ONLY A HOBBY.

Yup... it's only a hobby, but they'll sue you anyway. Unfortunately, there are people out there who won't take "no" for an answer.

> your car. One would think after losing two rigs, I would learn. RIGHT!
>

Ray, I have had ham call tags on my vehicles since 1982, my second year as a ham. I've come to the conclusion it's not what's on the outside of your vehicle that interests theives, it's
what's on the inside. If there is nothing there for them to steal you could put a sign on your vehicle telling them to check it out and they'll get nothing for their efforts.

I have never had a radio stolen and don't plan on having any radios stolen. If I am not in my vehicle....nine times out of ten neither is my radio. The other one time the radio is out
of sight. Depends on where I am whether I remove the antenna or not. Many times the antenna is how I find my vehicle in a parking lot. Unless I am at Disney World parked in the "Goofy"
parking lot.--Yeah, I've done that. :)

Bottom line as far as I am concerned: If you want to keep your radio...Don't make it accessible
to a thief.

I have lived and travelled all over this country...in all 48 of the lower states...I didn't drive while in Alaska and I've never been to Hawaii...but the only thing I ever lost in a vehicle was my virginity....if you can call it that...I didn't mind that at all.

PARA LOS RADIOAFICIONADOS HISPANOS EN INTERNET

RADIO INTERNET EN ESPANOL

A todos los radioaficionados hispanos que lean este E-Mail los invitamos a escuchar RADIO INTERNET EN ESPANOL que se transmite por esta red. Para hacerlo solo sigan las instrucciones y si tienen cualquier consulta escriban a miglia@ix.netcom.com.

EL TERCER PROGRAMA DE RADIO VIA INTERNET ESTA YA ON LINE, ESCUCHELO.

Tal cual lo programado a las 11:59 PM del Sabado 27 de Mayo fue colocado en nuestro FTP el tercer programa de Radio en Espanol Via Internet y como ya se volvio casi custumbre los radio escuchas comenzaron a bajarlo solo pasados algunos minutos de la media noche. Es notable ver desde que remotas latitudes hay latinoamericanos que ingresan a disfrutar de esta experiencia, nunca pensamos que nuestra gente estaba repartida por toda la tierra como lo esta. A todos muchas gracias por escucharnos y aqui algo de informacion:

Programacion Radio Internet en Espanol

051495.ra Primer Programa Tema Central "Internet Phone" Como Hablar Via Internet (New HF)

052195.ra Segundo Programa Tema Central "Videoconferencia Via Internet"

052895.ra Tercer Programa Variedad de Temas y Demostracion Internet Phone

Espanol.ra Archivo formato .ra para test

Leame.txt Este archivo

SINTONICE RADIO INTERNET EN ESPANOL YA ESTAMOS TRANSMITIENDO VIA LA RED

Si ahora es posible escuchar radio via Internet y nosotros pensamos que sera esta la nueva opcion que reemplazara las antiguas y ruidosas transmisiones de onda corta.
El proximo domingo 14 de Mayo comenzaran las transmisiones de los PROGRAMAS DE RADIO EN ESPANOL VIA INTERNET, dichos programas estaran disponibles en el FTP de nombre FTP.NETCOM.COM en los directorios /pub/mi/miglia y bajo el nombre correspondiende a la fecha de emision, por ejemplo este domingo 14 de mayo el file conteniendo al programa se llamara 051495.ra

FTP: FTP.NETCOM.COM
DIRECTORIO: /pub
SUBDIRECTORIO: mi

SUBDIRECTORIO: miglia
FILE: 051495.ra

PARA ESCUCHAR NUESTRO PROGRAMA DE RADIO EN ESPANOL VIA INTERNET

Para poder escuchar nuestro programa de radio en espanol debera contar con un software llamado RealAudio Player, una PC con Windows 3.1 y una tarjeta de audio. RealAudio lo podra obtener "SIN CARGO" dentro de Internet en:

http://www.realaudio.com/

Cuando este comunicado con esta pagina seleccione:
"donwload your own copy of the RealAudio Player"

Y siga las instrucciones completando la forma correspondiente con sus datos personales, las caracteristicas de su computador y por ultimo el tipo de cuenta en internet que esta usted utilizando. Esto lo ayudara:

A. Ingrese todos sus datos personales
B. Internet Connection = PPP
C. Provider = Por ejemplo NI.NET
D. Speed = 14.400 Baud
E. Machine and Sound = 486 DX2 66MHZ - Windows 3.1 - 8 MB - 340 MB Disco
F. Coloque su nombre el principio del PRE-REASE AGREEMENT

Completada esta informacion RealAudio le enviara de inmediato via
E-Mail un numero de registracion y un password. Con estos datos entonces regrese a http://www.realaudio.com/ y efectue el download del programa RealAudio Player.

1.- El programa obtenido (RealAudio Player) tendra un nombre similar a raplay07.exe.
2.- Ejecutelo colocando el comando raplay07.exe y ENTER.
3.- Este programa al ejecutarse genera un directorio de nombre RAPLAYER.
4.- Dentro de ese directorio encontrara el programa pnclient.exe que es el que utilizara para escucharnos.

Ahora bien para obtener nuestros programas de radio ingrese como ANONYMOUS al siguiente ftp:

FTP: ftp.netcom.com
DIRECTORIO: \pub
SUBDIRECTORIO: mi
SUBDIRECTORIO: miglia

O sea: ftp.netcom.com/pub/mi/miglia

Como Operar pnclient.exe desde Windows:

- Ejecute pnclient.exe
- Habra con el mouse el cuadradito superior izquierdo
- Selecciones Load...
- Seleccione Local File
- Con la ayuda de Browse... busque el file del programa con terminacion .ra en

su disco y seleccionelo.
- Oprima OK y disfrute de nuestros programas.

ESCUCHE CADA DOMINGO NUESTRO PROGRAMA DE RADIO EN ESPANOL VIA INTERNET
EL 21 MAYO TRATAREMOS COMO TEMA PRINCIPAL "VIDEOCONFERENCIA O TRANSMISION DE VIDEO COLOR VIA INTERNET CON UNA PC Y WINDOWS" FILE 052195.ra

Nota: A los 1.050 usuarios de internet que nos escribieron respecto a nuestro programa de radio, gracias.

>
>This is where problems will develop. You are making a judgement call as to
>who is "more worthy" of a channel. I agree that radios that have little
use
>should be sharing frequencies, it is quite difficult to implement this as a
>frequency coordinator. No matter what criteria you use, it has to be fair
to
>all, even the guy that has that private autopatch. Making judgement calls
>will get you in trouble.

Nonsense. It isn't possible NOT to make judgment calls when effecting coordination. Right now, SCRBBA has made one: only the needs of the limited number of people they allow to become trustees will be considered. No care is given to the interests of the average ham. No concept of the frequencies on 440 as a public resource. This has to change.

>frequency coordination pretty well, but has not addressed the larger
spectrum
>management issues.

Well, it's curious that you are able to develop your penetrating insight from your perch out there in Texas. From where I sit, here in Southern California, SCRBBA has done a rotten job of frequency coordination and a horrible job of spectrum management.

>
>If a frequency coordinator doesn't serve the existing systems by keeping
>interference to a minimum, that coordinator will then be attacked from both
>sides. Right now, SCRRBA is only being attacked by those new hams who want
to
>put a repeater on the air in a band that has been full (at least by
SCRRBA's
>definition) for 20 years.

Wrong. I'm not a new ham. Been licensed since '67.

>
>The decision to make a system closed is entirely made by the owner of that
>system. The frequency coordinator doesn't care either way. It is always
the
>right of the repeater trustee to determine who can and who cannot use his
>station.
>

However, it should be the job of the frequency coordinator to insure that an adequate number of OPEN repeaters ARE coordinated. If the trustee wants to operate a closed system, fine. But if there are too many wanna-be trustees with this desire, then most of them simply shouldn't be coordinated.

>>I really think the 440 spectrum has to be re-drawn. There has to be a
>>distinction between high level coverage and low level coverage.
>
>This is another good idea, if you can find a fair way to administer it. I
>would be surprised if there weren't some kind of sharing plan used by
SCRRBA
>already.

Then be surprised. There isn't.

>
>Yup... it's only a hobby, but they'll sue you anyway. Unfortunately, there
>are people out there who won't take "no" for an answer.
>
Mr. Reese has already admitted repeatedly that frequency coordination is not a valid grounds for a lawsuit. He and his group LIBELLED someone (read his previous posts) and got sued. They were not sued over coordination. He continues to trot out this lawsuit isue, apparently to discourage action on the coordination issue. (Do anything against SCRBBA and they'll sue you...get it?)

You really should cut that out, Mr. Reese. We've been all over this, and you ADMITTED that coordination matters were not a valid legal cause of action. Leave it alone.

4023. Repeater Questions

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-31 00:00:00 UTC
From: dfoster@qtm129ca.qntm.com
Message-ID: <3qi4se$eq6@worf.qntm.com>
Source record: 245624

I'm confused as to the meaning of a "closed" repeater. Does this mean you cannot use the repeater? Is usage prevented by not publishing the PL? Is the reason for this that a only the members pay for maintenance, so they want exclusive usage? Do the closed repeaters have alot of fancy features, so they need to be protected from hackers? How do you go about joining a closed repeater?

Lots of questions. Tnx for responses

Dave

Although there is no empirical evidence to support this, I know that someday, SOMEDAY, Mr. Angus will make a constructive contribution to a discussion thread on this newsgroup. It has never happened, in fact it has never come close to happening, but the day, nevertheless, will come.

These things take time.

Meanwhile, I suppose we'll all have to put up with his personal slurs and other unconstructive behavior.

This is a HUGE assumption on your part. How do you know what SCRRBA thinks?

>No care
>is given to the interests of the average ham. No concept of the frequencies
>on 440 as a public resource. This has to change.

This is what I meant earlier by the difference between frequency coordination and spectrum management. I believe SCRRBA has intentionally avoided the political football of spectrum management in favor of the purely technical frequency coordination. They're not trying to be all things to all people. This is what you're asking for, isn't it? For them to be all things to all people?

>Well, it's curious that you are able to develop your penetrating insight
>from your perch out there in Texas. From where I sit, here in Southern
>California, SCRBBA has done a rotten job of frequency coordination and a
>horrible job of spectrum management.

Look, dammit, I know people in SCRRBA, and I've been involved with frequency coordination for some time. I'm getting sick and tired of you telling me I don't know what I'm talking about.

>Wrong. I'm not a new ham. Been licensed since '67.

OK... So there are some old hams who support this arguement, too. I stand corrected.

>However, it should be the job of the frequency coordinator to insure that an
>adequate number of OPEN repeaters ARE coordinated. If the trustee wants to
>operate a closed system, fine. But if there are too many wanna-be trustees
>with this desire, then most of them simply shouldn't be coordinated.

Why should a frequency coordinator CARE who uses somebody's station? The coordinator should work to minimize interference between coordinated stations, nothing more. If the coordination group wants to address the larger issue of spectrum management, then they can write this into the policies to be followed by frequency coordinators. I believe SCRRBA has intentionally avoided involving themselves in spectrum management because it's so political and the

people in SCRRBA don't want to deal with the politics.

They can't avoid it forever, but the politics can destroy the organization if it is not dealt with in a positive manner. It takes strong leadership to accomplish this. I'm not sure anyone in the current SCRRBA structure is willing to attack this dragon...

Has anyone experiences to share ?

Scouting is what helped get us finally started in ham radio. One of the leaders is an Extra and taught
classes to us for the code. We even did a ham radio demonstration booth at our local Scout O'ramma.
My son and husband carried their HTs into Lost Valley and were able to communicate with me back home
in Riverside.

At the end of the month a local scout troup will be cooking for our local ham club at Field Day so we'll give
them plenty of exposure to the world of amateur radio. Don't know about your area but we even have a
scout net on Sunday nights on one of the local repeaters.

These are really too exciting but does show that we are trying to combine the two worlds together. In fact,
there are a lot of Scouting executives from our area that are also hams and in our local club so that probably
helps in the effort and means someone is always prepared out at camp to communicate if needed.

: Morse. As I'm typing this Honolulu Fire Dept.'s repeater just ID'ed
: (WNSL 461) in Morse. And of course, all the repeaters here also ID
: in Morse.

Under the current law, they have to ID in morse or voice. Voice
automated IDers are more expensive, and prevent emergency traffic from going
throughat the same time. CW can be overlaid on voice traffic with little
disruption of service.
When all digital radios enter the public safety service, ID will be
a packet, because it's only software then.

Joel,
Not all hams are like this. Even in the area I'm in (metro Philly) I've NEVER been treated like that on a repeater. I've checked into repeater nets with a HT when I shouldn't have (very weak signal) and those on the other end copied my signal after the third try. There are people out there who give a damn. I think you've run into a bunch of authentic old fashioned jerks. Trust me, you get them in every bunch. No matter how much testing you have, no matter how many years someone's been here, there is always that one group assholes that tries to ruin it for all of us. Hang in there, try and find another repeater and find some nice, interesting people to talk to. I wouldn't want to talk to those jerks anyway.

ESTAN LAS BANDAS DE HF DESAPARECIENDO ?

Los amantes de las comunicaciones tienen ahora otra modalidad disponible y se trata de INTERNET PHONE, si asi como lo leen ♦Hablar via Internet♦ este sera el fin de las bandas de HF o solo un reemplazo cuando las condiciones de propagacion no nos ayuden. Para hablar por internet solo siga las instrucciones y les recomendamos escuchar nuestros programas en espanol de RADIO INTERNET EN ESPANOL, para ello busque mas informacion de como hacerlo aqui mismo o escriba a miglia@ix.netcom.com

Por ultimo los que tengan Internet Phone listo y operativo les regamos nos lo hagan conocer a nuestro E-Mail. Gracias.

AHORA PODEMOS HABLAR POR TELEFONO VIA INTERNET PHONE

Es dificil de creer pero miles de usuarios estan hablando via la red INTERNET y si usted tambien quiere hacerlo aqui le damos toda la informacion necesaria para poder realizarlo y contestamos algunas preguntas tambien:

Pregunta: Cual es el costo para poder hablar via INTERNET PHONE
Respuesta: Ni un centavo mas de lo que paga actualmente por su cuenta

Pregunta: Se escucha claro
Respuesta: Lo mismo que una llamada telefonica internacional

Pregunta: A donde puedo hablar via INTERNET PHONE
Respuesta: A cualquier parte del mundo

Pregunta: Con quien puedo hablar via INTERNET PHONE
Respuesta: Con cualquiera usuario de internet que este On Line y tenga INTERNET PHONE

COMO HABLAR VIA INTERNET

Para poder hablar por telefono via Internet hay que tener los siguientes elementos:

486 PC Computer
8 MB RAM
Windows 3.1
Winsock 1.1 compatible TCP/IP y coneccion a internet 14,400 baud modem (SLIP/PPP)
Tarjeta de audio compatible con Windows
Programa Iphone (Demo o version registrada)

Si esta confundido con los terminos TCP/IP y SLIP/PPP consulte con quien le da su servicio internet y pregunte si su cuenta reune estas condiciones. Respecto al programa Winsock 1.1 o compatible esta dispoble sin costo via Internet. Ahora bien la tarjeta de audio debe reunir la condicion de ser Windows compatible como el caso de Sound Blaster por ejemplo. Por ultimo le hara falta el programa IPHONE el cual lo puede obtener sin cargo en su version demo o pagando por la version definitiva.
Teniendo todos estos elementos usted podra entonces conversar con otros usuarios que esten On Line y que tengan tambien Internet Phone no importando en que parte del mundo esten y lo mas interesante no pagara nada adicional por este servicio solo lo que actualmente esta pagando. Para tener una idea NETCOM ofrece el servicio windows Netcruiser por $19 dolares al mes con 20 horas prime time y free el resto, esta cuenta reune las condiciones para utilizar IPHONE. Con Netcom no hace falta Winsock 1.1 esta ya incluido.

Para obtener IPHONE Demo (Sin Cargo) ingresar a:

http:///www.vocaltec.com/

Hacer el download del programa y seguir las instrucciones, el costo de la version registrada es de $59.00.

IPHONE Vocaltec Inc. (201) 768-9400 o E-Mail info@vocaltec.com

For Winsock Trumpet send E-Mail to tech-support@trumpet.com.au o busque que hay muchas versiones sin cargo en internet como por ejemplo ftp.utas.edu.au

LA CALIDAD DE LA VOZ VIA IPHONE ES CLARA LOS ESPERO ON LINE PARA CHARLAR

Actually, I think you'll find that it is not the birds that are
IDing. They're just linear translators. The ID is being introduced
at the uplinking Earth station. The FCC requires uplinks to ID
since the infamous HBO incident. That's just passed straight through
the transponder with the rest of the signal. While subcarriered CW
is acceptable as an ID method, most of the TV uplinks use a digital
encoding in the vertical interval of the picture. We had to buy
encoder boxes programmed with the call signs of our uplink trucks.

>Morse. As I'm typing this Honolulu Fire Dept.'s repeater just ID'ed
>(WNSL 461) in Morse. And of course, all the repeaters here also ID
>in Morse.

Yeah, and most of the users, and some of the owners, just consider
it a legal noise that they ignore every hour (commercial) or every
10 minutes (amateur). It makes the FCC happy, so they've got a chip
programmed to generate it. It *is* less intrusive than a talking
box, gads I hate those.

Music on hold is not intentional music? Then why are they paying an
ASCAP royalty on it? Remember, with a phone patch we are dealing
with third party traffic. If the third party is paying to have music
on hold, I'd say that there is intent for it to be present. It is
the control operator's responsiblity to ensure that any third party
content transmitted is permissible. This isn't.

>price you paid and estimate its approximate value.

Good advice! In fact, if you use the ARRL insurance program you
should already have such a list anyway. Mine lists Model number,
description, serial number (if any), and replacement cost. The manual
or data sheet for each item on the list has the sales invoice stapled
inside the back cover (with credit card numbers obliterated, of course),
so the XYL and helper will know when it was purchased, from whom, and
how much was paid for it. On used items, I list the seller's name &
address and the price paid for the item on a small piece of paper and
staple that to the manual/data sheet.

A small amount of advanced planning and organization can sometimes
prevent unnecessary problems.....

The trustee has a say in the matter, but the trustee doesn't have the final
say in the matter if a frequency is open or closed. If SCRRBA feels the
ham community isn't being served by a particular machine, SCRRBA can yank
the coordination right from under any system.

>was the best technical solution. It was a very difficult process.

Yes I do agree that there is no fair way to do it, but IMHO it MUST be done.
I don't believe there is a chance that trustee will ever agree to a change.
Why? Because many of the trustees on 440 left 2 meters in disgust and
started their own systems. At the time 440 equipment was not easy to get so
those that got an early jump and staked a claim. Some of the folks on 440
can be seen as pioneers of 440. But as time went on, 440 equipment became
readily available and then anyone with a $1000 could slap a
repeater together in their garage and have it running on their workbench.
The reason everything is closed on 440 is trustees don't want to be faced with
the problem they had on 2meters.

440 used to be a paradise for repeater trustees, but unfortunantely
this paradise can't last forever. When amatuer radio equipment for 440 became
available especially with dual band 2m/70cm radios, licenses jumped, and the
airwaves on 2m became more conjested. The face of amateur radio changed.

Jim, many of the issues you brought up are concerns everyone has to face no
matter who coordinates. But the fact of the matter is a large percentage of

hams are in California just look at the prefixes. With the band plan as it is in CA, do you really think SCRRBA can effectively serve the ham community at large? With less than 20% of the FM band for 440 open and the rest for closed systems I don't see how this is possible.

SCRRBA did a good job in coordinating when it started, but things have changed so much in amateur radio. If SCRRBA made any attempts to address these problems (redrawing the band plan would be a start), the ham community at large would gladly support them. But nothing is being done because they don't want any changes because they have a conflict of interest since they are also a repeater trustee. A proposal for a change and honest talks to changing would satisfy most people.

This is a problem that will not go away. Unless SCRRBA bites the bullet, I'm afraid 440 will suffer the same problems as 2 meters you cited in your previous post. SCRRBA can't dance around this for fear of what they may face with the folks who have coordinated repeaters. If they do, they will never get anything done.

: selction, transmit out-of-band *into* the ham frequencies, install
: higher gain antennas, run 1000 Watts, and other things we as hams
: are privileged to do but other services are prohibited from doing?

I don't know why you would want them to, but I would think that for one good reason, they have not demonstrated their competence to do so. It is for this reason that they must operate with type approved equipment, with fixed powers and antenna orientation and gains whereas no such restrictions are imposed upon amateurs (in Canada and U.S. and most other countries). Since they write no exams to prove technical competence, yet amateurs do, the percieved injustice is in fact can only be deemed fair because the resultant priviledges are commensurate with the demonstrated qualifications.

: You're getting silly now, Jim.

Hardly. Quoting out of context is a better measure for determining silliness. Moreover, postulating illogical conclusions based on out-of-context quotations further confirms the silliness. It is absolutely amazing to what extant some will use puerile and intellectually bankrupt methods of countering arguments. It not only demonstrates desparation for lack of intellectual capacity, but it also leads other to believe that those who use such methods have very heavily calloused knuckles.

Hi There,

To all current subscribers of VHF Communications Magazine, Issue 2/95 of VHF Communications is now at the printers and is due for shipment around June 28th. The following is a preview of the contents of this forthcoming issue:

A Sweep Tuner for the VCO
A Grid-Dip Meter for VHF and UHF
A DIY Receiver for GPS and GLONASS Satellites; part-5
Frequency Doubling using Semi-Conductor Diodes
A 28/432 MHz Transverter
A 28/50 MHz Transverter
Receiving System Parameter Measurements using Radio Stars
A Big Wheel Antenna for 70cm

If you are not already a subscriber and would like a sample copy please drop me a message.

Good reading ... Mike

4041. 40 Meter Interference (Spread-Spectrum?)

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-01 00:00:00 UTC
From: John.Klingelhoeffer@comsat.COM
Message-ID: <9505018020.AA802050310@ccmail.cmc.comsat.com>
Source record: 245392

****
Has anyone heard the following emission:

I was asked by a friend to look / listen at a wideband signal that has been bothering his 40 meter operations last night. At roughly 0058 hours GMT, a signal appears in the 7175-7450 kHz range. It was still on the air when I quit the shack at around 0315Z or so. It is quite a wideband signal, covering all of this range (where I could hear it through the broadcast stations). The sound of the signal is odd. If it were a narrowband signal, I would say it sounded like a broadcast station with an "open microphone" and phase distortion from the ionosphere. However, the signal is quite wideband (several hundred kilohertz) and the "phase shifting" sound is very, very regular and very unlike "natural" ionospheric action.

I listened to the signal on an Icom R71-A while also watching the surrounding +/- 500 kHz on a Tektronix 7L13 spectrum analyzer. It was very apparent when the signal came on the air by listening, but on the analyzer it was down into the noise of the broadcast signals. The signal strength meter on my R-71A is calibrated, and the wideband signal had a level of about 40-50 microvolts (in a 3 kHz bandwidth) delivered from my 40 meter dipole. There was some ionospheric fading, but not much. My understanding is that many members of the net my friend had been attempting to communicate with the last few weeks have all heard this strongly on the east coast and into the midwest. It is not a local phenomena.

I'd appreciate knowing if anyone else has heard this signal, and if so what it is. The level is typically 30-40 dB below the megawatt HF broadcast stations operating in the early evening in that section of the spectrum, but just about on par with many of the normal 100 watt amateur stations, which makes it an interference problem (we have enough interferers on 40 already!). Is this just some HF broadcast station with real problems in its megawatt transmitter, or is it perhaps a direct-sequence spread spectrum station attempting to be covert by hiding in the grass of these high-powered transmissions? Listening to some strong station like Deutche Welle with an AM detector, there is no perceptable interference from this noise-like signal.

Please address responses to this mail reflector. Pardon me if this has been discussed before; I was just asked to look at it last night, but it has apparently been on for several weeks.

John...

This is where problems will develop. You are making a judgement call as
to
>who is "more worthy" of a channel. I agree that radios that have little
use
>should be sharing frequencies, it is quite difficult to implement this
as a
>frequency coordinator. No matter what criteria you use, it has to be
fair to
>all, even the guy that has that private autopatch. Making judgement
calls
>will get you in trouble.

Excuse me for butting in here but there is nothing judgemental about it. Maybe in Texas they have their own FCC rules, but take a good hard look at PR docket 8522. It says it all. SCRBBA (and your method of thinking) are not in concordance with the docket.

I use CF's all over my house and don't do a whole lot of HF stuff
when they are running but I've been pleasantly surprised at the
lack of RFI and noise problems from them.
In my conservation-hating household (wife & kids turn on the lights
in broad daylight and get HOSTILE if they blink or flutter a bit
before full brightness) Compact Flourescents are a MUST.

Being related to your employment, ham radio would be inappropriate for
your stated purposes and illegal as well.
Not only that but Packet Radio, of which I am a user and enthusiast,
is painfully slow. Even just reading email txt messages would get
tedious. I would recommend a satellite phone setup though it may well
be too costly. It would, however, allow fairly high baud rates for
data exchanges.
I haven't tried any of the various hamsats for high speed packet
radio connections so don't know their relative worth or performance.
If you will be in range of any coastal commercial radiotelephone
systems that might be a way of allowing you to hook up a modem to
a radiotelephone.

No Brian, *you* missed the point. I've attached the article that started this thread. The original article makes a number of false claims. Debunking those claims has *nothing* to do with "attacking" CW. You make it sound as though your manhood is on the line. What is being "attacked" are the ravings of Morse is Best fanatics that refuse to accept that some other modes might be better in any number of different ways. Many of those debunking these wild claims a) have demonstrated their knowledge of Morse Code, b) use Morse Code, c) are happy to let amateurs continue to use Morse Code, d) don't buy the "I had to" and "my way is best and only" arguments.

Oh, and by the way, learn to use a news reader and quote properly. Your posts are nearly impossible to follow and recently have been nothing more than one-liners that contribute nothing to the thread.

Anyway, now the article that "started" this thread.

>
> I'm confused as to the meaning of a "closed" repeater. Does
> this mean you cannot use the repeater?
It means the repeater is not intended for use by the general ham
public. No one can force you to not transmit on the input frequency
used by a closed repeater; however if you intentionally do so as to
interfere with users of the repeater it is not nice and can be
prosecuted. If you play around and discover by going through all
your PL tones that a certain one keys up the repeater, all the owners
can do is ask you not to use the repeater and change the PL tone or
touchtone sequence in hopes it will take you a while longer to figure
it out.

>Is usage prevented
> by not publishing the PL?
Usually, though as noted above, sometimes touchtone sequences are used,
as well as other schemes to prevent non-dues-paying user access.

>Is the reason for this that a
> only the members pay for maintenance, so they want
> exclusive usage? Do the closed repeaters have alot of fancy
> features, so they need to be protected from hackers?
All of the above apply as well as the occasional unreasonable so-and-so
who just thinks he should keep his system to himself and his 2 buddies.

>How do
> you go about joining a closed repeater?
Some are by invitation only. Most accept new members who are willing
to contribute funds or manpower to support the system. Looking up
the owner/trustee in the repeater directory or contacting someone you
hear on a closed system (by phone or open repeater preferably) should
get you this sort of information.
>
> Lots of questions. Tnx for responses
>
> Dave
> KE6MOM
..Ah, maybe you are in fact in the People's Republic of California?
The above responses may well not be applicable in that case. Read
some of the posts about closed CA repeaters. Actually, there are a
lot more closed systems that want NO new users out in CA but with a
bit of diplomacy I'm sure you can find a group that will let you in.
You don't have much choice since almost all usable repeater pairs are
already populated there, thus limiting your ability to go snooty and

set up your OWN closed personal system.

... I used to run RTTY and ASCII on 2 meters but gave it up since
everyone went to packet that had any interest whatever in digital
radio.
What aggravated me is that most hams have never tried rtty or straight
ascii on VHF and thus don't realize that it is close to 100%
error free WITHOUT any packet-like correction scheme. It results in
much faster throughput rates and for the majority of ham communications
it is much to be preferred over packet radio. However, rtty and
ascii stuff isn't easily relayed automatically through others's
systems but, hey, nowadays even packet doesn't support that sort of
thing much anymore.

We bought one for our antenna range use here at Los Alamos Laboratory
and I think it's GREAT. My biggest gripe is that it doesn't cover
higher frequencies and no coverage from 170 to 400 or so MHZ even
if you buy the VHF and UHF versions both.
What it is really sweet for is field use and working at or close to
antenna feedpoints .... before we got this I spent half my time
calibrating long lengths of hardline for use with our H-P and other
network analyzers.

It ain't so, but it used to be. Recent rule relaxation by the FCC
specifically lists ordering the proverbial pizza as a permissible
ham use of a ham phone patch.
On occasion some sysop of a patch will shut you down since he thinks
the FCC was all wrong in the new rules, and since he owns/controls
the patch there is little recourse in such situations.
For many years the FCC attempted to enforce the idea that ham autopatch
use was almost entirely for EMERGENCIES ONLY, but thank goodness that
went away. If patches were that seldom used they wouldn't be there
when an emergency DID arise.

I've been following this thread for some while. On the subject of open systems, There is a good coverage OPEN radio on 449.425 that is not very busy and is friendly. There was another good wide coverage radio on Mt. Wilson on 447.025 that went away. Maybe some of the locals or one of the .435 crowd can tell us why the good open machine went away.

A few years ago I attended a several OPEN SCRRBA meetings. Seemed like a well run friendly organization at the time.

I'll give that repeater a try.

>There was another good wide coverage radio on Mt.
>Wilson on 447.025 that went away. Maybe some of the locals or one of the
>.435 crowd can tell us why the good open machine went away.

I used to be a regular on that repeater. My recollection of the problem that
lead to the close of that repeater was due to the actions of a single
individual (KD6NBD). Although there are those that believe another undesirable
should be added to the list N3???, but I really didn't think he was that bad.
N3??? was undesirable, but he is viewed as an undesirable on many repeaters
but none have shutdown due to his actions. KD6NBD was another animal however.
NBD's operations along with his volatile behavior attracted other individuals
who enjoyed tormenting NBD. Who in turn made the repeater unuseable.
I don't think the 435 crowd can be blamed for this, although this is a myth
that has been accepted as fact.

Unfortuantely N6PVC gave up and gave the pair to someone else - N6ENV???

To be honest, things were not bad on the Mt. Wilson Repeater if you compare
it with the problems 145.22 (CLARA) repeater, which might I add happened
during the same time.

The Mt. Diablo ARC has been doing Field Day at the summit forever and ever, at least they were the several times in the late 1970's when I went there.

The arrangement then, as I recall, was to explain to the ranger at the gate that you were a ham going to Field Day, and you didn't have to pay.

The view from the summit at night is awesome, it is usually clear for miles though the fog does roll in past the Golden Gate.

>* Warning - all three are RF-dense locations, big time *

Um, yeah. Good idea to bring your Motorola radio :-). At the same time, Diablo has an excellent HAAT and, as long as your HT isn't trashed by the hundreds of commercial radios there, you can work some smokin' simplex. At least I always do when go to Diablo.

Try asking around on the 147.06 (600+) CTCSS 100.0 repeater for info on the MDARC Field Day.

INFO: COMMUNICATIONS VOLUNTEERS IN GOVERNMENT SERVICE
INFO: AMATEURS U.S (@USA: INFORMATION), CAP, MARS, RACES
FROM: AUXILIARY COMMUNICATIONS SERVICE (ACS) of the Governor's Office of Emergency Services; the volunteer communications reserve of the State of California.

RB380 for release 5/29/95
Subject: MGT - APCO and the Radio Officer Pt. 1/2

The role of the communications volunteers in government has changed quite a bit in the past 15 years -- particularly in urban and suburban population centers. This is due in no small part to increasing demands upon its functions - which are very different today. Unfortunately there are increasing jurisdictions where such units have disappeared because of the inability to keep up with the times - although the leaders and participants may not yet grasp that as the real cause.

To have current relative value to government, the emergency communications unit needs to be an all-purpose Public Safety communications resource. That means that the Radio Officer MUST understand local government systems and know the people responsible for them. Without both the knowledge and a close working relationship, the likelihood of being able to provide a viable service becomes smaller year by year.

The proactive Radio Officer constantly plans by asking, "What if?". In time these questions expand to include others in the local government who are involved with these systems: "What if the fire radio system fails? What if the law enforcement radio system fails? What if Local Government Radio systems fail? What about the Public Works radio? What if the inter-county or intra-state systems fail?" The astute Radio Officer and staff constantly invoke such questions and design viable answers.

ARLD029 DX news

ZCZC AE05
QST de W1AW
DX Bulletin 29 ARLD029
From ARRL Headquarters
Newington CT June 1, 1995
To all radio amateurs

SB DX ARL ARLD029
ARLD029 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Joe, NJ1Q, Michael, KA2AEV, Dave, N7RK, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral from QST. Thanks to all.

BOUVET, 3Y. UA9OBO, RW3GW and perhaps others, leave Saint Petersburg sometime this month to take part in a scientific expedition to the Antarctic lasting several months. Bouvet is scheduled as one of their stops and landing permission has been obtained. Their call will probably be 3Y/R0FL.

PRATAS ISLAND, BV9P. Seemingly unfazed by an unstable power station on the island, heat related health problems with some operators and less than optimum propagation, the CTARL team managed over 10,000 QSO's as of May 28. They should be active until June 5. Listen for their CW on 1827, 3504, 7004, 10134, 10424, 18074, 21024, 24894 and 28024. SSB operations are around 1827, 3555, 7065, 14195, 18125, 21295, 24945 and 28495. RTTY is on 7082, 14082 and 21082. Some 50 MHz and OSCAR operation is possible. QSL via KU9C.

ERITREA, E3. As of bulletin time, there have been no QSN's on Connecticut PacketCluster nodes for Jin, JF1IST, who was to be active through June 11. A station signing E31FAO was posted on the Tokyo PacketCluster which may have been him. E31FAO was heard around 14280 and 21283 kHz between 1300 and 1500z.

TUVALU, T2. Masa, JE1DXC, should remain active through June 6 as T20XC. He operates all HF bands and uses CW, SSB and RTTY. QSL direct to his home CBA or via the bureau.

GIBRALTAR, ZB2. Dave, N7RK, will be active again from ZB2 June 23 to 30 as N7RK/ZB2. He will be on 80, 40, 30, 20 and 17 meters running 100 watts and wire antennas. QSL via CBA. Note that all

QSL's from Dave's November 1994 N7RK/ZB2 operation have now been sent out either direct or via the bureau, depending upon how received.

SAINT PAUL ISLAND. Everything is a GO for this operation slated for July 27 to August 2. Ops AA4VK, WA4DAN, KW2P and W5IJU will sign /CY9 on all bands with CW, SSB and RTTY. Some 6 meter and satellite operation is possible. QSL via WA4DAN.

ANTIGUA. Members of the Frankford Radio Club plan to be active during the CQ WW SSB Contest October 28 and 29. This multi-multi effort will sign V26B. Team members will be active on various bands and modes both before and after the contest period as time permits, using V26B as well as other calls. QSL V26B via WT3Q.

THIS WEEKEND ON THE RADIO. The Portugal Day Contest, sponsored by Rede dos Emissores Portugueses, runs from 0700 to 2400z June 3. Exchange signal report and serial number. Details appear on page 113 of June QST.

: use in order to communicate with Hams using packet radio?
Hmm, it depends on a lot of things, like what the gateway sysop has done,
if you're an amateur and if the person has a TCP/IP station setup.

If you are not an amatuer, then (I think) you shouldn't try to send mail,
as we can only talk to amateurs.

If they gut has a station running and the gateway sysop has allowed it
and you're an amateur, then you can do it, let's say your friend has the
callsign VK1AA.

You email vk1aa@vk1aa.ampr.org this will probably get through.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 JUNE AND FORECAST FOR 02 JUNE - 04 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 31 May
Daily Proton Fluence >1 MeV: 1.6E+06
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 5.9E+08 (high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Jun 03 Jun 04 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Jun: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 31 May
Learmonth 21 3334 4532
Fredericksburg 22 24
Planetary 25 23

Observed Kp for 31 May: 4454 4433
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Jun 25 Active to minor storm
03 Jun 16 Unsettled to active
04 Jun 15 Unsettled to active
COMMENT: IPS Geomagnetic Warning 15 was issued on 26 May and is
current for interval 29 May to 5 June. Coronal hole induced
geomagnetic activity should decline after today.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Jun normal fair fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Jun fair poor poor
03 Jun normal fair poor
04 Jun normal normal fair
COMMENT: HF conditions should steadily improve after 2 June.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
01 Jun -6 10 to 15% below predicted monthly values

Predicted Monthly T index for June: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
02 Jun 5 Near predicted monthly values
03 Jun 10 Near predicted monthly values
04 Jun 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 18 was issued on 26 May and is
current for interval 30 May to 5 June. MUFs at Townsville were near
predicted monthly values, with some spread F observed at times during
local night. MUFs at Hobart were depressed 15% during daylight
hours, with spread F observed during local night hours. Spread F
was also observed during local night hours at Sydney. Northern
Australian region communicators should continue to use the monthly
T-index of 20.

4063. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-01 00:00:00 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-802004410@gonix.com>
Source record: 245414
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.13 04/29/95 13:09:10
Changes: New comp.infosystems.www.* newsgroups
Posting-Frequency: posted on the 1st of each month

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at the Ohio State World-Wide Web Server (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under
the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port
5555 (if the standard Gopher port of 70 was used, the ":5555" part
would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with
callsign.cs.buffalo.edu via non-standard port 2000 (if the standard
Telnet port of 23 was used, the ":2000" part would be replaced by
":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from
your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all
http: URL's in this directory also have corresponding ftp: or gopher:
URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all
URL's through the Lynx WWW client, any referenced documents external
to this document are subject to future changes beyond my control. In
addition, with networks and their administration being what it is,
many services with up-to-date URL's may be temporarily unreachable.
Please consult with your local gurus, consulting staff, or help-desk
to confirm that it's a non-local problem, then ask the Elmer him or
herself (me in the case of URL's which appear outside of individual
entries). The currency and accuracy of URL's should be at least no
worse than that of the Elmers entries themselves (which are each
individually confirmed by me every 2 years, and updated within 1 month
on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.

Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament

about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]" and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly to keep both parts under the 64K message limit for Usenet requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles)

in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/

gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW site:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers/top.html

The advantage of reading the Elmers list at this site via WWW client
software is that all URL's are converted to hypertext links.

see also the newsgroups under comp.infosystems.www.* (I haven't listed
URL's for all of the newsgroups under this hierarchy as there are now
about 20 of them (!!!).)

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

Amateur Radio Elmers Resource Directory (as of 06/01/95)
++++++++++++++++++++++++++++++++++++++++++++++++++++++
- A -
++++++++++++++++++++++++++++++++++++++++++++++++++++++

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP
numbers in Ohio to:

ipaddr@ag9v.ampr.org
```

which is a mailing list read by a team of coordinators.

[Editor's note: All ampr.org coordinators are listed in the document

VHF packet (AX.25 and TCP/IP)
HF SSB and RTTY
FM/repeaters
Clubs/activities
Public relations
Writing (for newsletters and ARRL publications)

My job at as QST Features Editor at ARRL HQ includes (among other
things) writing and editing general-interest feature articles for QST,
and writing the FM column, Up Front in QST and Strays.

I'm the "handling editor" (copy editor+) for other regular columns
conducted by other contributors, including Packet Perspective by Stan
Horzepa, WA1LOU; Public Service by Rick Palm, K1CE; Club Spectrum and

Section News by Steve Ewald, WV1X; How's DX? by Bill Kennamer, K5FUV; Happenings by Jim Cain, K1TN; Contest Corral and Special Events by Warren Stankiewicz, NF1J; Hamfest Calendar and Coming Conventions by Gail Iannone; most of the contest rules announcements and results articles; and I compile the Annual Index in the December issue.

I coordinate and often contribute to the New Books reviews and New Products listings scattered throughout the magazine, and often contribute to QST Product Reviews. I also wrote the "Modes" chapter in the 1995 ARRL Handbook and chapters in the ARRL Operating Manual, and I've contributed to several other publications, including W1FB's Help for New Hams (ARRL) and Ham Radio Horizons (CQ Communications).

I started working at ARRL HQ as QST Copy Editor in December 1989.

I'm 37 years old, I've been a ham since 1976 and I hold an Amateur Extra Class license. I'm a member of the ARRL, the ARRL A-1 Operator Club, Ten-Ten International Net (53313), and the Middlesex Amateur Radio Society/Connecticut Amateur Radio Emergency Service (MARS/CARES, an ARRL Special Service Club, in which I served two terms as president and a couple of years as newsletter editor). I'm also an ARRL Public Information Officer for the Connecticut Section. These days, most of my on-air time is limited to 2-meter and 440-MHz FM and 2-meter TCP/IP packet radio, although I crank up the HF rig when I can spare some time and try to join in VHF/UHF contests when I have the time and access to equipment. My favorite Amateur Radio activity is Field Day; the MARS/CARES club has a terrific time with that event every year.

I have about 10 years' experience with personal computers, including MS-DOS, Windows and IBM OS/2. I was a full-time professional commercial broadcaster for 12 years.

My latest volunteer public service project is that I'm the official Amateur Radio Liaison the the 1995 Special Olympics World Games, to be held in Connecticut. I report to Dr Chuck Bruder, N3AGA, the Special Olympics' Deputy Commissioner of Telecommunications. (This is supposed to be literally the biggest event in the US in 1995, and possibly the world! They expect 10,000-15,000 athletes, 45,000 international delegates from almost all nations, more than 500,000 spectators, about 20 hours of prime-time network TV coverage, and probably a visit from President Clinton and the First Lady...whew!)

Rich Bono NM1D Internet: rbono@nectech.com
+1 508 635-6300 nm1d@aol.com

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

ftp://oak.oakland.edu/SimTel/msdos/hamradio/
ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or
5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Maintainer of the rec.radio.amateur.* Supplemental Archives available
~from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and making
it available to more people. Also coming is a WWW front-end for web
surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up
system. The old system was very specific to the FCC database format
because that's all that was available when it was written (yes, the
server is very, very old). But now there are a number of databases
floating around the net for different countries and I am rewriting the
system to be more flexible and to accommodate a variety of formats and
search types.

In doing so, I'll have the ability to add data for many more countries.
That is, of course, if I have the data. In order to do this I need
help. I need to get in touch with all people that have access to
databases from countries other than the US. The more up-to-date these
databases are, the better. If you have access to a database and would be
willing to donate a copy to the callsign server for everyone to use,

please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

Electronic Circuits
Antennas and Transmission Lines

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

++

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet

radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP," "MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.) To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your guest login name (if you have one). If you want a permanent login, write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet
Enthusiasts Society (GRAPES), but I am in contact with them, and have
experience using their 56 kBaud radio modems. At the very least, I can
forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by
WA4DSY explaining the theory and practice of the 56 kBaud radio modem.
(I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem,
but there are better solutions. The Ottawa PI card and the Gracilis
PacketTwin card are two good solutions. Of course they are PC bus
cards. If you need standalone capability, the Kantronics Data Engine
can handle it, as can the incredible Gracilis PacketTen. PacComm claims
their new Sprint TNC can, too (PacComm now also manufactures the
Gracilis cards under license and you can get them either from them or
from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done
"digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20,
creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number,
and turnaround on info requests may be slower than when dealing with
commercial outfits. Please cut the volunteers a little slack.

++

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm.
My professional fortes are UNIX-based system administration, sendmail,
TCP/IP-based ethernet network engineering, network systems security
(including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS,
Windows and various applications/protocol stacks, including PC-NFS and
LAN Workplace.

I'm still clueless in the electrical/circuit department.

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Scott Ehrlich, Internetworking ASM, Eastern Mass. E-mail: wy1z@neu.edu
Boston ARC ftp archives: ftp oak.oakland.edu /pub/hamradio
Boston ARC Web page: http://www.acs.oakland.edu/barc.html
ARRL Web page: http://www.acs.oakland.edu/barc/arrl.html

I've played around with Mac and PC hardware, as well as dabbling a
little with DOS, UNIX, and MacOS.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is
available at ftp://oak.oakland.edu:/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service
Rules and Regulations) at:
ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/rib/part97.txt

Programs mentioned in QST are in:
ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

Macintosh Amateur Radio Software Archive:
ftp://oak.oakland.edu/pub/hamradio/mac/

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm
EST) on the Talk America Radio Network, now has a World Wide Web home page:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Boston Amateur Radio Club also has a World Wide Web Home Page:

http://www.acs.oakland.edu/barc.html

Due to the popularity of the KY1N VE listing and W1GSL's hamfest list,
I have incorporated both of these listings into the Boston Amateur Radio
Club's Web page:

http://www.acs.oakland.edu/barc/ne-happenings.html

With the cooperation of the Boston Amateur Radio Club, I have put
together a World-Wide Web page for the American Radio Relay League
(ARRL).

Since the ARRL does not yet have web capabilities of their own, this page
is being offered on the same site as the Boston Amateur Radio Club's web
page.

The address to access the page is:

http://www.acs.oakland.edu/barc/arrl.html

It has pointers to the ARRL Letter, E-mail addresses of HQ staff,
official League bulletins, and much more!

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a
copy of the page via E-mail; send a message to listserv@info.cern.ch
with the word "help" in the body for more information). Ask me for
more details about this.

Robert S. French AC6GO

rfrench@cs.stanford.edu

The Stanford Amateur Radio Club, W6YX, will be taking over the Ham-Univ
Mailing List for College and University Amateur Radio Clubs, effective
immediately.

The new address will be: ham-univ@w6yx.stanford.edu

The old address at the New Jersey Institute of Technology will continue
to work for the time-being as a forwarder to the new address.

To subscribe or unsubscribe, send mail to:

ham-univ-request@w6yx.stanford.edu

with the body saying "subscribe" or "unsubscribe".

Current subscribers have been automatically added to the new mailing
list.

Please let ham-univ-owner@w6yx.stanford.edu know if there are any
problems.

~~~~~~

76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable

Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

++

Richard Hieber DL8MFQ, AA8CP (Extra Class)

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise: QRP work
mobile operation
computers (DOS, OS/2, Linux)
Packet Radio
wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html
http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

The QRP-L mailing list is intended to be a relatively noise-free environment for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building.

rdkeys@csemail.cropsci.ncsu.edu

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there
are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be
used, unless no control station assumes control for the
evening, in which case it is an open roundtable format
discussion group.

Note: The midnight local time gathering is designed to maximize
the number of checkins spread out over the world, so less
confusion and more checkins are heard. The hope is that
someone will be aboard almost anywhere and be heard at
least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE
and USE of continuous wave radiotelegraphy as directly is
applicable to amateur radio. Such PRACTICE and USE may
take the form of learning about radiotelegraphy and its
history in amateur/commercial areas, its application to radio
telecommunication, the practicing of the art and craft of
radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special
Interest Group (HB-SIG) of the Raleigh Amateur Radio Society
(RARS), on 15 January, 1991 and was revised for another
presentation on 26 January, 1994.

This document contains excerpts of the National Electrical
Code (NFPA 70-1990) that, in the author's opinion, apply to
the installation of amateur radio equipment as would
commonly be found in most amateur radio stations. Direct
excerpts from the Code are contained within inset
quotations. Paraphrased excerpts from the Code are
itemized. The author's interpretation and discussion of the
Code is set full-width. The author's interpretation and
discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any official

governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'...

ikluft@thunder.sbay.org (home) ikluft@oes.amdahl.com (work) Santa Clara, CA

Former Maintainer of rec.radio.amateur.misc and rec.radio.cb FAQ lists

Available from:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

and

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/cb-faq/top.html
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/cb-faq/

Currently the posting of these articles have been suspended indefinitely
(and will probably be removed from the above sites shortly). New
editors are being actively sought to take over maintenance of the above
resources and keep them from disappearing from the net permanently. As
with any volunteer effort, new volunteers are often needed. We need new
editors to post the above FAQ's. Preferably this should be someone who
has enthusiasm for hobbyist radio, experience with Usenet, and the
ability to work with the other editors. No single person can know all
the various aspects of these diverse hobbies so the editorial review
groups are intended to make a greater combination of experience.

The FAQ's were posted with the AUTO-FAQ software, which is written in
Perl. So it would be a plus for volunteers to post the FAQ to have Perl
installed on their system and be able to use "cron" or "at" so that
postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer
should contact me at my E-mail address above.

The rec.radio.amateur.* Working Group Mailing List is now being
maintained by Jack Hill. See his entry for subscription information.

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the Amateur Community (but there are plenty of other wares on-line). Through user support I hope to keep the latest and greatest ham software on-line. The BBS also offers access to nearly all of the Internet (USENET) NetNews groups, plus access to most Internet services such as Email, FTP, TELNET, Gopher, WWW, Callsign Lookup, Etc... Below is the information that is needed in order to access the BBS via Telephone, Telnet, or FTP. Please pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410 661-2475 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.34,V.FC,HST,V.42bis)

+1 410 661-2648 - 1200/2400/4800/9600/14400/23000
(MNP2-5, V.32bis, V.42bis, Turbo-PEP)

TELNET/FTP - telnet://wb3ffv1.sed.csc.com/
ftp://wb3ffv1.sed.csc.com/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 1.30b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2
and features more than 4 Gigabytes of on-line file storage.
Most transfer protocols are available!! (5 phone lines)

I attempt to keep the latest and greatest HAM software on-line, and encourage all to upload anything new that they come up with, as it is of benefit to all. Here is a sample of the software that is available for downloading:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's
AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
G8BPQ PC-Node (Version 4.08)
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners

Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of available archives are stored in a file called 'FILES', and it is located in the /var/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic directory.

If you want to access the BBS via Telnet, all you have to do is access:

telnet://wb3ffv1.sed.csc.com/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://wb3ffv1.sed.csc.com/

and login as 'anonymous' (may not be necessary, depending on your FTP client). This system is currently attached to the Internet via a dialup SLIP link, and should generally be available 24hrs, but at times the modem will drop the line. Also, since this isn't the fastest link, I will be limiting the maximum number of anonymous sessions for the moment.

ampr.org IP Coordinator for Maryland Subnet (44.060.xxx.xxx)

(see James Fay's entry instead for ampr.org IP coordination in Prince George's, St. Mary's, and Calvert Counties)

[Editor's note: All ampr.org coordinators are listed in the document at:

Fred Lloyd, AA7BQ flloyd@qrz.com
Scottsdale, Arizona | finger flloyd@qrz.com for PGP Key | http://www.qrz.com

---

Author of the QRZ! Ham Radio CDROM. I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data files, frequency lists, etc., that would make a useful edition to the QRZ CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ FTP archive and QRZ WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

ftp://ftp.qrz.com/
http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State Univeristy
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called "elmers@iastate.edu" we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Civil Air Patrol

Co-Host - Ham Radio and More

Ham Radio and More is available for free to any AM station that is
willing to run it with national ads intact. If you want there to be a
nationwide amateur radio talk show, call your local station and ask
them to get the program. They don't have to be part of the Talk America
network. They can call KFNN in Phoenix (+1 602 241-1510) or Talk America at
+1 508 460-0588.

The Ham Radio & More show, after 4 years on the commercial airwaves, will
soon be available via shortwave on WWCR. Beginning June 5, 1995 (Monday
early AM), 3:00 AM ET on 12.160 MHz and repeated each Saturday at 5:00
AM ET on 12.160 MHz.

See the entry for Scott Ehrlich for the Ham Radio and More World-Wide
Web Page.

P.O. Box 7039
Cut 'n Shoot, TX 77303-0039
(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

++

Bruce Perens AB6YM

perens@hams.com

Maintainer of Linux for Hams CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CD-ROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled, and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30.
Free CD-ROM Subscription for Volunteers

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please e-mail to Perens@Rahul.net. You may be be able to get a free CD-ROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

AMSAT-NA Life Member #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

++

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is
expensive and limited!

Bob Salnick, Spokane,WA | UUCP: oliveb!isc-br!tau-ceti!DejaVu!salnick
Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

David Stockton, GM4ZNX

dstock@hpsqf.sqf.hp.com

SWL since 1960
Licensed since 1984 (UK full class A)
Degrees in electronics&comms and digital techniques etc.
Currently senior design engineer doing RF design

Fairly broad interest in amateur radio (but not contests!)

Antennas, Transmission lines,filters from fundamental theory to practice
Receiver structures and circuits from simple to state of the art.
Transmitters, ATUs
Test equipment
Wide experience of troubleshooting/repairing equipment.
Professional experience of EMC/RFI
QRP
UK Operation and Licensing

My morse is flaky, but I keep working on it
No interest in contests
No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL Technical Information Service Coordinator (tis@arrl.org)
ARRL Email Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL Email Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

HELP
QUIT

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

ARRL Volunteer Counsel

I would (have been doing it by default) be happy to be an Elmer in the
area of older HF gear, especially QRP operation with Ten Tec Argonauts
(and Power Mites, etc.). Also have experience with other 10-20 year-old
economy HF rigs, particularly the Kenwood TS-520.

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1) How to operate HF from your apartment without being evicted
2) How to pass tests, both written and code
3) How to make a virtue out of the necessity of your limited equipment,
and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the
baby is asleep, so the XYL demands silent running. Besides, with my
wimpy wire, there is little point in trying to run voice.

Miami, FL

I have been active in amateur and commercial radio for the last 26 years
I have worked on AM, FM, CW, and SSB sets from longwave through 12 GHz.
I have also built TV stations for UHF and the 2.5 GHz ITFS band.

I am particularly interested in finding others to learn from my
experiences. I am available by net or in person.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively
involved in its testing. I'm the author of OrbitDRV (the tracking TSR
that comes with InstantTrack) and a number of other InstantTrack
auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
operates the Internet host AMSAT.ORG to provide for efficient
communications between people interested in the amateur satellite
program. At this time two services are provided: a message remailing
service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive
access to a variety of information related to the amateur radio
satellite program. Use your Web browser program (e.g., Mosaic) to
access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server.
In addition, various files and programs are available for anonymous
FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail
on the Internet without keeping track of each other's Internet
address. The remailing service allows each user to receive mail sent
to the address callsign@amsat.org, where callsign is that user's
amateur radio callsign, or other unique identifier. Mail sent to
that address will be routed first to the AMSAT.ORG host at UCSD in
San Diego, then remailed from AMSAT.ORG to the network address
specified by the user. In most cases, this process delays the
message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to
receive certain types of messages. There are public mailing lists
available to anyone, and private mailing lists available only to

certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current
and planned NASA space missions. Be forewarned: at times
this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases
pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and
remailing aliases is done manually. Later, this service will
probably be automated and you will have to follow a strict message
format. For now, you may send requests in free format. They will
usually be processed within a few days. In general, you will not
receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the
one in your From: header.

You should not send messages about your subscriptions to any of the
mailing lists. Send them to listserv@amsat.org instead. This
includes questions, requests for changes, requests for information
about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing
service may be obtained by requesting the "address book". Note that
the address book as distributed contains only the callsigns of the
available addressees, not their actual Internet addresses. The address
book is updated occasionally, and does not necessarily contain the very
latest information.

You may request to be added to the list, to be deleted from the list,
or to have your Internet address changed on the list. Please include
your callsign if you have one. If you don't have a callsign, that's
OK, but please say so. If you have more than one Internet address
you want to have available on the AMSAT.ORG remailer, you may so
specify. For instance, if you have a regular Internet address and a
CompuServe account, you may appear in the address book as both w1xyz
and w1xyz-cis. Mail sent to w1xyz would go to your Internet address,
and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts
have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing
lists described above. Send a message to listserv@amsat.org,

specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and
is not limited to the US. This reflects the intent to make this
directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via email to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++

+ Richard Hieber DL8MFQ, AA8CP (Extra Class)
+
+ sz0026@daphne.rrze.uni-erlangen.de
+ AX.25: DL8MFQ@DB0SIF.DEU.EU
+
+ Areas of expertise: QRP work
+ mobile operation
+ computers (DOS, OS/2, Linux)
+ Packet Radio
+ wire antennas
+
+ I am an EE student at the University of Erlangen-Nuernberg, Germany. I
+ am active in the university ham radio club (IG-Funk), spending time and
+ thoughts in improving the permanent club display in the lecture hall
+ building. So I have some first hand experience in making printouts and
+ display arrangements visually appealing.
+
+ My main interests are shortwave, especially QRP, and computers (Packet
+ Radio, Internet). I have some experience in shortwave mobiling and
+ considerable success with a modified citizens band whip on the bands
+ from 10 to 20 meters. Generally I am fascinated with simple yet
+ effective equipment, hence my obsession with QRP. I like wire
+ antennas. I feel that over the course of time I will more and more learn
+ to appreciate old ham radio equipment (boatanchors) and get more into
+ homebrewing.
+
```

+ I've compiled a list of QRP Clubs worldwide and a FAQ file for the
+ QRP-L mailing list. They are available from the QRP-L WWW Pages at:
+
+ http://ncc1701-d.cc.nd.edu/qrp-l/index.html
+ http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)
+
+ The QRP-L mailing list is intended to be a relatively noise-free
+ environment for discussion of any subjects relating to low-power amateur
+ radio operation. Example topics: portable operation, equipment design
+ and construction, solar and battery power, QRPp, contesting, kit
+ building.

! Maintainer of Linux for Hams CDROM

! What Is Linux for Hams?

! Linux for Hams is a full-featured Linux system with special additions
! for Amateur Radio. The system includes all of the sophisticated
! software that one would expect on one of today's engineering
! workstations, along with software for packet radio communication,
! electronic design, printed-circuit manufacture, a database of FCC rules
! and license exams, a code-practice program, and other Amateur Radio
! applications.

! The general-purpose software includes software for connecting to the
! Internet, compilers for the C and C++ languages, a full-featured
! typesetting system, a symbolic mathematics program, CD-ROM authoring
! tools, and many other programs. Unlike other Amateur Radio software
! collections, Linux for Hams is an integrated system. The programs are
! already compiled, and configured to work together with the rest of the
! system.

! Linux for Hams is being built by Bruce Perens AB6YM, with the help of
! several volunteers. Of course, it builds on the work of the thousands of
! volunteers who helped create Linux and the other programs it contains.

! The system will be available for free if you download it using FTP. A
! low-cost CD will be available, for about $30.
! Free CD-ROM Subscription for Volunteers

! Most of the software in Linux for Hams is free software, contributed by
! its author for anyone to use. I would like to compensate those authors
! for their work. If you are the author of a significant piece of software
! included in Linux for Hams, please e-mail to Perens@Rahul.net. You may
! be be able to get a free CD-ROM subscription to Linux for Hams.

! Bruce Perens AB6YM reserves the right to decide who gets free
! subscriptions, what is included in a free subscription, and for how long
! those subscriptions last.

! For more information about Linux for Hams, check out the WWW page:

4068. license plates

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-01 00:00:00 UTC
From: ibx@Cs.NOtt.AC.UK
Message-ID: <199506010907.CAA08884@UCSD.EDU>
Source record: 245433

You guys are lucky. Here in the UK our licence plates have:
* an initial letter followed by
* (up to) three numbers followed by
* three letters.

e.g. M 1 KKQ
K 12 OTO
M 989 TTV

Now, this initial letter is advanced one step throught the alphabet every
August. August 1st 1994 we went from "L" to "M" and
August 1st 1995 we'll go from "M" to "N".

There was demand from the UK hams (including the RSGB for the "G" plates
to be reserved for hams. "G", note, and we've currently got as far as "M"
(though "I" was not issued).
The licensing authorities are STILL thinking about it!

The reason is that they sell the "popular, personal" plates for real money.
I believe that the minimum charge is about 300 dollars and prices rise
to over 1,000 dollars.

Miond you, the Brit idea of inventiveness on licence plates is:
* for a comedian - COM 1 C
* for a lawyer - L 1 BEL

Me ...?
I'll stick to my pedal-cycle.

73, Ian G4EAN @ GB7BAD or ibx @ cs.nott.ac.uk

Unfortunately, yes! And its not only restricted to amateur radio
either. Its a sad aspect of human nature. Best way to avoid this
happening to your estate us to tell your wife which of your ham buddies
you trust to help her dispose if your stuff and make sure the above
mentioned scenario does not occur. Also list your equipment with the
price you paid and estimate its approximate value.

I really hate people that abuse the system. Now that we can finally get club calls again, someone has to be a jerk. As soon as the FCC catches on to this, they'll probably shut down issuing club calls by citing this abuse as the reason. Who are these tuckers anyway? Did they certify that each one of these organizations really exist with more than two members each? Does each club have organization papers?

I had a call sign plate back in Pennsylvania. I only recall two times when the plate really grabbed someone's attention. The first time was at a gas station. The attendent was writing up the credit card receipt, looked at the plate, and said "what does that say?" The other time another ham, who also had call sign plates on his car, honked CQ to me on the road.

I still have the call sign plate. It's tacked up on the bulletin board above my desk at work.

> Scouts.....
> >Has anyone experiences to share ?
>
> Almost any scout leader would be thrilled to have you offer your station
> to use for the Jamboree on the Air JOTA.

(Sigh...) I have done JOTA a couple times with our local troop, but have found relatively little real interest among our local scout leadership. Everyone is very computer savvy, and sees radio as "old technology". I'm not much help here, as I mostly use radio as an escape from my job in data communications!

The troop is also so much into rank advancement, they have no interest in "elective" merit badges.

I'm looking for suggestions, too. I'm going on my son's troop's bike trip this weekend, and will bring along an HT. But my guess is that unless I can demonstrate bike-mobile internet-connected web browsing via packet, it will just get yawns.

4076. TUNE Utility (DOS) Available

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-01 00:00:00 UTC
From: S.Miller@rus.uni-stuttgart.de
Message-ID: <3qjqfu$vuo@info4.rus.uni-stuttgart.de>
Source record: 245441

TUNE10.ZIP is a simple but useful program that lets one set his radio frequency and/or operating mode from the DOS command prompt. Nothing whizzy -- just a way to change frequency/mode quickly. Currently only Yaesu FT-757GX-II and FT-890 radios are supported (using the C.A.T. interface). If I get info. on other radios from others I'll try to expand it.

Those nice menu-driven or windows-based control programs for radios are cool, but sometimes I just wanna quickly change frequency/mode and then get on with something else (on the computer). ;-)

I put the program on ftp.qrz.com in the /tmp directory for now (is there a better place?).

Feedback is welcome, and encouraged!

73,

Wow. That's really neat. I read that the FCC was going to allow Radio
Shack to give out call signs, perform abortions, and do minor dental work.
I'm sure glad to see that they are diversifying!

>
>This is a HUGE assumption on your part. How do you know what SCRRBA
thinks?
>

This comment illustrates your lack of understanding regarding basic frequency management and coordination here in So. Cal. I'd say it's pretty clear that an organization that doesn't hold open meetings, has highly restrictive membership requirements, and is notorious for not answering written inquiries from others, has in fact made its priorities pretty obvious.

You say you are against things like this, but then you defend SCRRBA. This indicates either a basic contradiction or a basic lack of understanding and knowledge, Mr. Reese.

>This is what you're asking for, isn't it? For them to be all things to all
>people?

Nope. Not asking them for anything. I'm advocating that they simply be removed as a coordinating body.

>
>>Well, it's curious that you are able to develop your penetrating insight

I recently purchased a HTX-404 rig from Marymac down in Texas. For those of you not familiar with Marymac, they were a non-franchised Radio Shack who sold the same Radio Shack products at a discount... my HTX-404 cost me $209.00 whereas my local Shack had it for $250.00 ($229.95 + sales tax).

I recently called to place a second order and discovered that they are no longer in business! Does anyone know what happened to Marymac and if there might be another company like them that I can do business with?

Apparently only from one side: that of the repeater user. Your comments
speak volumes about your lack of knowledge of how coordination has to work.

>You have not contributed constructively to this thread by trying to frighten
>people with invalid claims. You guys in Texas got sued for libelling
>someone with whom you were evidently having a coordination tussle. You
>libelled him. This is a different thing.

No, we did not libel him. He accused us of libelling him. We did not, and
have published the factual basis for the article which he claimed libelled
him.

Further, even though we have had an extended email conversaiont on this
subject, you still refuse to concede the possibility - which I know as a
certainty - that the libel suit was a smokescreen. The real issue was
always his coordination. He merely chose the libel route as what he felt to
be a better avenue for litigation - but, had we not published the article in
question, there is absolutely zero doubt in my mind that he would have sued
us over the coordination. You cannot say he would not have unless you have
discussed the matter with him; if not, you do not have the information
necessary to make such a statement.

>Bottom line: you should't have libelled him.

We didn't.

>>Come talk to me when you get out into the real world.
>You seem to have very little knowledge of the real world. You do seem to
>have a knack for libel, based on your own recounting of your real-world
>experiences.

Who's the one making slimy personal assaults now?

>On the other hand, I have, I think, clarified the fact that you got sued not
>for being poor frequency coordinators; you were sued for LIBEL.

As a smokescreen for the real issue: his coordination.

>Well, a thousand bucks isn't very much. But it was only that much because,
>as you say, you LIBELLED the fellow. This is a tort in all 50 states.

Not to you, maybe; it represented a significant fraction of the Society's assets at the time.

Once again, though, we did not libel him.

>>You failed to answer my central question about this, so I'll ask again - if
>>this had nothing to do with coordination, why, then, was the offer
>>repeatedly made to drop the suit in exchange for our coordinating the guy's
>>repeater?
>I guess he didn't like the way you coordinated him. :-) But notice that he
>didn't sue you for that.

He thought he had a better avenue of attack. This in no way means that he would not have sued us directly over the coordination issue if that was his only choice.

>He sued you for LIBELLING him.

He accused us of libelling him. We did not.

SCRRBA is certainly not perfect. Neither is any other frequency coordinator.
However, any frequency coordinator attempting to deal with the UHF situation
in southern California will face exactly the same problems SCRRBA faces. I do
not believe anyone can force wholesale change of the type you and others
propose. Changing coordinators won't make the closed systems go away.

It is still the trustee's decision. I see where there could be a problem if
the frequency is shared between a closed system and an open one. I assume
SCRBBA will co-channel only if both trustees agree? Is this the case?

>There is no fair way to administer the re-draw of the spectrum. The
>existing band plan is antiquated and needs to "open up" to serve the
>ham community.

I'm glad you agree that there's no fair way to do it. It's very difficult for
a coordination group to change the band plan after there are many users in
place. These existing users have to be willing to change. Most of the time,
this isn't the case. When Texas proposed switching 2 meters from 15kHz to
20kHz channel spacing, we spent three years convincing the trustees that this
was the best technical solution. It was a very difficult process.

>features, so they need to be protected from hackers? How do
>you go about joining a closed repeater?

Good questions Dave. I'll use the definitions from Kevin Karamanos and Karl Pagel's So. Cal. "The Original Repeater Location Guide" to answer:

CLOSED: Requires membership in sponsoring group. Membership is open to all interested amateurs. Contact licensee for information by sending S.A.S.E. to his callbook address.

PRIVATE: Requires membership in sponsoring group. membership is at the desecration of licensee or club using the repeater.

In most cases that I have found, membership in a closed system is based on a cost pool arrangement to cover maintenance and phone bills, and in some cases a buy-in to the equity of the machine itself. In some cases membership is based on club activity participation, usually a RACES type of organization. Some closed machines are used for specialized activities, like earthquake telemetry.

Every closed system I have come in contact with has been open to an interested new member, in some cases I have been invited to "drop by" occasionally even if I do not join the sponsoring organization. of course, no patch codes without membership. :-) Some closed systems are remote bases with lots of features, including links to other bands, even remote HF operation. Other systems are just simple repeaters. Access is usually controlled by not publishing the PL for the repeater, and well behaved non-members not hacking the tone. :-)

Since the licensee is responsible for repeater operation, closing a system to members only is one way trustees keep track of who is using their station, and getting agreement to operating guidelines. This became quite an issue around here with a formerly open system on 2 meters a couple of years ago that resulted in tort action and criminal complaints.

Hope this info helps.

Source record: 245452

Sometime before this thread broke down into ad hominem attacks on all parties involved, a challenge was issued to find more than five open 440 repeaters in So. Cal. Well, I was in my repeater guide anyway, so I counted over 40 open repeaters on 440 in So. Cal. I have also run in to several in the San Diego / Inland Empire area that are not in my guide (could be I need a newer guide though) :-).

As to simplex; since simplex operation on repeater outputs that does not cause interference is a generally accepted practice, there are more than two frequencies available for simplex.

4092. GB2RS News 4th June 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-01 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <802053907snx@llondel.demon.co.uk>
Source record: 245457
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 4th of June and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners. And a special good morning to those listening from National Field Day sites.

RSGB members are reminded that the June edition of Radio Communication includes the full text of a proposal for changes to the VHF and UHF amateur bands. The proposal, which comes from the CEPT, is a discussion document and members' input is required by the Society. Further information about the RSGB's response to the document will appear in the July RadCom.

At the Drayton Manor Rally, the Worked All Britain organisation presented a cheque for 12,500 pounds to the Royal National Lifeboat Institution. The donation is the result of the WAB Silver Jubilee Appeal and will provide a Class D Lifeboat which will be named 'C John Morris DFM, G3ABG' in memory of the founder of WAB.

The 50MHz Cape Verde Islands expedition group led by Geoff Brown, GJ4ICD, is due to remain active until Wednesday the 14th of June. 6 metre operation will be centred around 50.110 MHz on both CW and SSB. The group will also operate on all bands from 10 to 160 metres using D44BC's station.

The GB2CW Morse practice transmissions for the greater Glasgow area will be reduced to once a week from Wednesday the 7th of June. This will be for the duration of the summer months. Transmission will take place on Wednesday evenings from 2000UTC on 14.250MHz. The 10 metre HF broadcast is being temporarily suspended. A copy of the new RSGB Morse practice schedule is available from the Morse Practice Co-ordinator, David Pratt, G4DMP, 11 Moorleigh Close, Kippax, Leeds, postcode LS25 7PB.

An incorrect telephone number appeared in the list of Senior Novice Licence Instructors on page 96 of the June issue of Radio Communication. The correct phone number for Avon's senior instructor Mr G J Bennett, G4LJO is 01934 843507.

There is a vacancy for the position of RSGB Liason Officer for Hampshire. Candidates wishing to apply for the post should write to the Council member for Zone D, Julian Gannaway, G3YGF, Dean Hill Barn, E Dean, Salisbury, Wilts SP5 1HJ.

Now news of some special event stations at home and abroad:

GB0VIS will be operating to mark the opening Canadian federal government, which makes them unique.

Andy Adams, GW0KZG, will be operating as GW0KZG/MM from on board the Royal Research Ship Charles Darwin until the 20th of June. Operation will be on 2 metres SSB using 100 Watts to a 12-element beam. The ship is presently located off the north-west coast of Scotland, and will sail off the west coast of Ireland to Barry, South Wales, by the 20th of June. Andy will be activating a number of "wet" locator squares during the voyage. Look for him around 144.240 MHz between 1200 and 1300, and after 1800 UTC.

The Rotarians will be holding their International conference in France in Nice, France between Saturday the 10th and Thursday the 15th of June. The ROARS special event station will be based across the border in Monaco, using the callsign 3A2RAR.

During this month, the G7 nations will be holding a summit meeting in Halifax, Nova Scotia, in Canada to discuss financial and political matters. To commemorate the event, the Dartmouth and Halifax Amateur Radio Clubs will operate two special event stations, CG7D and CG7H, for the whole of June. Their primary objective will be to work amateurs in the G7 group of countries, which includes Great Britain. These stations in Nova Scotia have been granted the use of the prefix CG7 - normally reserved for British Columbia - by the ateur Radio Society has an on the air evening. Telephone 01384 374354 for details.

Now some items of HF DX news from the RSGB DX News Sheet, which is edited Chris Page, G4BUE:

As part of an Antarctic scientific expedition lasting several months, UA9OBA and RW3GW are hoping to be active from Bouvet Island from the start of November 1995. They have necessary permission from Norway and their call will probably be 3Y/R0FL.

From Eritrea, Jin, JF1IST is on United Nations business until Sunday the 11th of June and plans to operate all HF bands, plus 50MHz and OSCAR 10 and 13.

The S0URE expedition in the Western Sahara will take place between Friday the 9th and Thursday the 15th of June. Operation is planned on all bands and modes, especially 6 metres and RTTY.

Next the Rally News:

Today, the 4th of June, the Spalding Amateur Radio and Computer Rally takes place at Springfield Gardens, Spalding.

On Sunday the 11th of June the Elvaston Castle National Radio Rally will take place at Elvaston Castle Country Park, near Derby. Details can be obtained from Ken, G3OCA on 01332 662818.

The Amateur Radio Caravan and Camping Club Rally will take place from Friday the 9th until Sunday the 11th of June at Elvaston, Derbyshire, which coincides with the radio rally. For further details contact G4LWA on 01494 531755.

The 6th annual Belfast Rally also takes place on Sunday the 11th of June at the Chimney Corner Hotel, Antrim Road, Glengormley, Belfast. For details contact David Caldwell on 01232 471370.

Also on the 11th, the Royal Naval Amateur Radio Society Annual Mobile Rally will take place on the HMS Collingwood Sports Field, Fareham, Hants. Further details can be obtained from Clive, G3YTQ on 01329 234143.

The RSGB Bletchley Park Amateur Radio and Computer Rally will take place on Saturday the 17th and Sunday the 18th of June at Bletchley, Milton Keynes, Buckinghamshire. Telephone 01923 893929 for details. Three pages of information on the event can be found in the June edition of RadCom.

The Scarborough Amateur Radio Society Radio Electronics and Computer Fair will be held on Sunday the 30th of July. The show's manager has changed address: Ross, G4ZNZ can now be contacted at 4 North Street, Nafferton, Driffield, East Yorkshire. His new number is 01377 257074.

And news of one rally cancellation:

The Gordon Schools Amateur Radio Club has announced that the North of Scotland Amateur Radio Convention - the Gordon Rally - which was scheduled for Sunday the 18th of June, has had to be cancelled.

Now for the HF contest news:

RSGB National Field Day, one of the Society's flagship HF contests, began yesterday and will conclude today, Sunday the 4th of June at 1500 UTC. This CW event involves club stations operating portable and the rules are in the April edition of RadCom.

Next some VHF contest news:

The IARU 50MHz contest got underway yesterday and will finish at 1400 UTC today the 4th of June.

The UK Six Metre Group's 24 hour Summer Contest starts at 0001 UTC on Saturday the 10th of June. The exchange is RST, UKSMG membership number if appropriate and the first four characters of the locator. Logs should go to The Contest Manager, UKSMG, 57 Green Lane, Harrogate, postcode HG2 9LN.

The Worked All Britain Group 70MHz Phone Contest takes place today, Sunday the 4th of June between 1400 and 1800UTC. The contest is open to all licenced amateurs and short wave listeners. Contest stationary can be obtained by sending a 29 pence stamp to Kate Wragg, G0FEZ, whose address is correct in the RSGB Call Book.

Now some repeater news:

The 70 centimetre repeater on Lincoln Cathedral, GB3LS, was turned off on Wednesday the 24 of May for a major overhaul. The repeater, which as been on air for the past 15 years, will be out of operation for several weeks while refurbishment is carried out.

And now the solar factual data:

The period from the 22nd to the 28th of May saw solar activity at very low levels. The geomagnetic field was up to active conditions on the 24th. Sunspot numbers were zero everyday except for the 22nd and the 28th, when 13 was recorded. The sunspot mean for the period was 7. Solar flux levels fell slightly from 71 units on the 22nd to 66 units, with an average for the period of 68 units. No flares were reported.

The electron fluence remained at a moderate level throughout. The X- Ray flux declined from A5.9 units on the 22nd to the minimum reading of A1.0 units for the rest of the period. The average was A1.8 units.

The 90 day solar flux average on the 28th was 80 units, one unit down on last week, and it is still falling sharply. Geomagnetic conditions were mostly 'quiet' to 'just unsettled' levels except for the 24th when an Ap index of 30 was recorded. The quietest day was the 27th with an Ap of 6 units. The average for the period was Ap 12 units. The state had been 'mag alert' up to the 24th. The aa indices, as supplied by the British Geological Survey for the period from the 16th to the 22nd of May, started at sub storm levels with 67.9 nanoteslas on the 16th. Levels then declined every day and by the 22nd they were down to only 12.1 nanoTeslas. The average for the period was 28.8 nanoTeslas, about K3.

I'll repeat the figures: spots - 7, flux - 68, Ap index - 12, X-Ray flux - A1.8.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 19th to the 25th of May, averaged 6.4MHz. Levels increased from 5.9MHz on the 19th to peak at 7.6MHz on the 23rd. Due to the increase in geomagnetic activity on the 25th, levels had declined to 5.1MHz. On the following day levels showed signs of improving again as 6.7MHz was recorded. The darkness hour lows declined from 3.3MHz on the 19th to 2.8MHz by the 24th, with an average for the period of 3.1MHz. The daytime highs took place between 2000 and 2200 hours, while the darkness hour lows took place between 0300 and 0400 hours. On the 21st sporadic E lasted for five hours, while during the early hours on the 24th spread F was observed.

I'll repeat the figures: highs - 6.4MHz, lows - 3.1MHz.

And lastly the solar forecast.

This week the more active side of the sun will be rotating into view, solar flux levels are expected to increase to the high 80s. Solar activity may reach low levels with isolated C class flares expected. Geomagnetic activity is expected to be predominantly at quiet levels but could increase next weekend to active levels. Ionospheric MUFs for the south during daylight hours are expected to reach 20MHz and 17MHz for the north. Darkness hour lows are expected to be about 12MHz. The Zeta Perseids meteor shower is expected to peak on the 8th of June. The shower will last till the 16th. Over the last few years some of the best

sporadic E openings have took place during the first half of June.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Uniform Romeo and G7 Whisky Charlie series, and Novice calls in the 2 0 Alfa Lima and 2 1 Echo Delta series.

I just took my no code tech test (and passed :-) I'm waiting for my
call sign.

Anyway, the Radio Shack no-code tech book says that there is no business
use of ham allowed. If I read this strictly, I would interpret it to mean
that I can not use an autopatch to order a pizza on my way home from work.

I really cannot think of a better or more important use for an autopatch.
Say it aint so.

>will get you in trouble.

Everything you do is a judgement call. Let me suggest that the system
used for commercial broadcast stations be examined as a suitable model
for dealing with these issues. Broadcasters are assigned exclusive use
of a particular frequency for a limited license term. At the end of that
term, the renewal process is open to competitive filings by others who
would like to use the channel. The FCC holds a public hearing, looking
at the operating record of the existing broadcaster, his proposed plans
to enhance his operation in the public interest, and at the proposals of
others who may make competitive filings. The entity that seems to offer
the best use of the channel in the public interest is then awarded
the license for the next term. The actual operating history of the
existing licensee is given great weight. If it appears to comply with
good usage in the public interest, the existing entity will usually
get the renewal. But if the entity hasn't shown good faith efforts to
serve the community, then one of the competitive filings may gain the
license instead. It's somewhat rare, but it does happen.

Now this process could be applied to coordination by making coordination grants of a limited term, and by opening the coordination renewal process to competitive filings. A public hearing would then be held to determine whether to renew a coordination, or switch it to another amateur group. Spectrum planning and policy guidlines would need to be in place so that repeater owners and potential repeater owners would have objective criteria for operating in the amateur community's best interests. This is, of course, the highly political part of the process, and would need a strong consensus of the area amateurs to be viable. This process must be open to *all* amateurs, and not just existing repeater trustees, or just to "members only". It must be seen to be open and fair to all of the amateur community if it is to have a chance of working.

Naturally, because amateur radio doesn't have every channel occupied in many areas, coordination becomes much simpler there, and the chance of a competitive filing is nil since an alternative channel would be available for those wishing to put a new machine into operation. It's in the highly congested areas, and on the highly congested bands, where this approach is needed.

Note, since coordination isn't de jure mandatory to operate a repeater, and 97.101b actually forbids exclusive channel assignment to a particular amateur, but since it is mandatory in a de facto sense because of 97.205c, it may be a good idea to have several pairs on each band set aside that are guaranteed *not* to be coordinated. This is similar in concept to the "test pairs" in SoCal, but wouldn't be limited to just tests. A person could setup a repeater on one of these pairs at whim, subject only to the limitations of 97.101b. This would prevent anyone from being "locked out" of repeater ownership or operation simply because all the coordinated pairs are being well used in the amateur community's interests at the moment.

>
>The only way I know of is first come, first served.

That in itself is a judgement call, IE saying those who ask first
are more worthy than those who ask later. It's simply a way of
embedding inherited priviledge into the system. This is the way
monarchies work, but isn't a valid model for a free society.
If it were, we wouldn't need elections, the first candidate to
file for office would be granted the position, in perpetuity.

>>Right now, SCRBBA has made one: only the needs of the limited
>>number of people they allow to become trustees will be considered.
>
>This is a HUGE assumption on your part. How do you know what SCRRBA thinks?

Looking at how they *act* is a good way to determine how they think.
When is the last time they pulled the coordination of one of their
trustee members? When is the last time they made an existing trustee
co-channel with an outsider? When is the last time they solicited
input from the user community on the usefulness of a particular
coordination?

>it is not dealt with in a positive manner. It takes strong leadership to
>accomplish this. I'm not sure anyone in the current SCRRBA structure is
>willing to attack this dragon...

Any coordination body is a de facto spectrum management organization,
even if their only concept of management is "first come, first served".
Indeed, SCRRBA is unlikely to be able to dodge the issue much longer.
Just as they were forced from the coordination job on 2 meters, they
will lose that job on 70 cm too if they don't face up squarely to
their responsibility to the general amateur community in their spectrum
management role. I think a good model for them to follow would be to
issue limited term coordinations with competitive filings and comparative
public hearings required periodically for an existing coordinated repeater
to retain its coordination. If an existing group can't operate in the
best interests of the amateur community, they should lose their coordination
protection to another group who will operate a machine in the interests
of the community. It's the community's spectrum that is at issue, not
any individual group's equipment.

As usual, Jeff, you don't seem to have a grasp of the issues.
Repeaters aren't primarily intended for random one on one
QSOs. Repeaters serve their user community in much the same
way that a newsgroup serves us here on Usenet. They serve as
a common medium for geographically diverse groups to meet and
converse. The key word here is "group". The repeater allows a
group of people, not all of whom are in direct simplex range of
each other, to converse without losing the context of the
discussion through being unable to hear all the participants.

Repeaters often serve as "watering holes" where groups with
common interests gather to talk and exchange ideas. A simplex
frequency is usually unsuitable for this purpose at VHF/UHF,
especially considering that many of the participants are mobile,
or operating from HTs.

Closed repeaters are like poorly moderated groups where
the moderator only lets his buddies post. That's not a
particular problem on Usenet, since others can simply
start a new group and ignore the clique. That can't work
on an amateur band with limited channels, however. The
number of newsgroups is fixed in that case by physics.

>
>I like CW. Reading Gary's posts feels like finding out
>that there is no Santa Clause. Or more accurately, I have
>a feeling like when I converted to conservatism while reading "Atlas
>Shrugged" by Ayn Rand in my college days. ;-)

Yep, it's a culture shock when popular myths get exposed for what
they are. But that's part of growing up. The more you learn, the
more you discover the world doesn't work the way your nursery
rhymes said it did.

>Seriously, I want to know about the modulation techniques Gary
>describes. There is nothing I know of that would keep
>everyone from using it! Heck, the ARRL band plan allows any
>digital transmission down to the bottom of every HF band as long
>as the bandwidth isn't too wide.

The technique I mentioned is the form of MSK used by the GRAPES
RF modem. It occupies 1.4 Hz per baud. That means that if it
were used to transmit 60 WPM Baudot coding (60 WPM RTTY), it
would only occupy 63 Hz. Meanwhile, 60 WPM CW, for those who
can do it, occupies 250 Hz due to the keying sidebands. The
narrower bandwidth allows more band sharing in the frequency
domain and improves SNR. With uniform codes, FEC, and coherent
detection, the effective SNR is again greatly improved. Then
if you add packetization, the band can be shared temporally
as well as spectrally, leading to much more efficient and
effective use of the limited HF allocations.

Now there are even better modulation techniques that can be
applied to low rate signals. Some of them offer up to 30 dB
of correlation gain over MSK, but they generally require a
more complex receiver, though the transmitter can be similar
in complexity to the simpler modulations. In general, transmitters
are the *easy* part, whether they be CW, AM, SSB, digital, or
whatever. It's at the receiver where the level of complexity
required for good performance can become high. One of the
advantages of digital modulations is that the required receivers
can be somewhat simpler for high performance than would be the
case for analog modulations, or incoherent non-uniform codings
such as Morse.

>I have thought of one possible argument in favor of CW, but it
>is probably irrelevant. In the event of a nuclear detonation,
>it is my humble understanding that all solid state equipment

>within hundreds of miles will be destroyed by the EMP.

Not necessarily so. According to EMP simulator tests published in QST a few years ago, equipment isn't vulnerable to EMP unless connected to a long unprotected conductor, such as a HF antenna, or mains power, at the time of detonation. Typical portable and mobile gear isn't affected. NEMP protectors exist which can snub these spikes even for long conductors. Polyphaser is one manufacturer. Coupled with good grounding practices and proper station layout, there is no reason for solid state equipment to be vulnerable to EMP, whether of nuclear origin or simply caused by lightning.

A 20 MT airburst over the continental US at an altitude of 200 miles (a nearly optimum case for NEMP) would put a induction field on long conductors similar in magnitude to a medium size lightning bolt at 7 miles. Now that can get sensitive equipment attached to a long conductor, but isn't of much concern to most of us who practice good station engineering. The only significant difference in the induced pulses will be that NEMP has a faster risetime than ordinary lightning generated EMP. Modern gas discharge protectors of proper design are fully capable of clamping the faster pulses, see Polyphaser's NEMP line of suppressors.

I agree completely, and I'll surmise that based on your recommendation
we can put to rest any notion that any service outside of amateur
radio itself can be looked at to "justify" the continued CW
requuirement of amateurs access to HF?

That being the case, can we assume we won't see others justifying
amateur knowledge of CW because some service uses it for ID, etc?

In fact, then if amateurs are the only place to look for
justification of CW testing, then I think any continued
requirement to test for CW knowledge is extremely weak, as
there is no real reason to favor any one mode within the ham
ranks over any other mode. Let each amateur decide for
him/herself...merge the CW test questions into the overall
test scoring and then CW is no different in emphasis as SSB,
Packet, FM, etc.

All this brings up an interesting point... do any mobile rigs have removable faceplates like hi-end car stereos do to deter theft?? (It seems like I may have heard about one a long time ago, maybe...) Does that system really work, or can they just get a new faceplate and put it on the radio???

In Georgia, the fee for Amateur Radio plates was recently rescinded because of the service provided to the state by hams during times of emergency. If you live in a state where there is an extra charge for Amateur Radio plates, you can take your case forward to the powers that be. It worked here in Georgia!

4113. Tucker family callsign update

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-01 00:00:00 UTC
From: tarsala@earthlink.NET
Message-ID: <m0sH3Ib-003BL3C@moon.earthlink.net>
Source record: 245478

The Tucker family continues to be busy applying for club call signs. Two new ones have appeared in the 5/29 fcc database update They belong to Eric Tucker, AA6ET:

KE6UEP LOS ANGELES AMATEUR RADIO CLUB
KE6UEQ LOS ANGELES AMATEUR RADIO ASSN

Other club call signs obtained by Eric Tucker:

KE6TXG Southern California Amateur Radio Group
KE6TNT Aardvark Amateur Radio Club
KE6SWN Olive Tree Amateur Radio Club
KE6SWM Arbol Olivo Amateur Radio Club

As you recall, the Tucker family had received 24 club call signs amongst themselves as of two weeks ago. This addition brings the total to 26, 23% of all KE6 club call signs issued. According to the club call sign file, the Tuckers seem to be the only family with multiple club call signs in the entire country. We still wonder: what on earth are they planning to do with them?

Message-ID: <1995Jun1.053500.19310@galileo.cc.rochester.edu>
Source record: 245479

A few years ago, if I recall correctly, there were a series of articles in a Ham magazine about some fellow who turned his bicycle into a high-tech operating station, replete with rig, antennas, computer, and lots of other cool stuff. He also spent lots of time biking around, I think. Anyway, my memory of this is very vague, and I was wondering if anyone knows who it is that I'm thinking of, and where I could find out about his neat work. Does my (poor) description ring any bells?

Thanks,
- Hoss

While it's possible that strong radiated signals from the laptop
are causing spurious products to be generated in your wideband
HT receiver, it's more likely that it's simply the broadband
garbage being radiated directly on channel from the laptop that
is getting you.

The solution is the same in either case, practice good RF shielding
techniques on the *source* of the noise. It's often a mechanical
and electrical challenge to shield a laptop while still keeping it
light and usable. One thing that can help is GC EMI spray. It's
a conductive spray that can be used on plastics to improve RFI
shielding. Of course, conventional VHF RF shielding measures can
be applied as well. I've outlined them often enough here, check
the archives.

I don't really know why the Tuckers have done this. But a friend and I have speculated that this "mad dash" is an attempt to get a vanity call sign by flooding the FCC with a bunch of forms. This is akin to tossing a large net hoping to catch a neat callsign. Remember applications for vanity callsigns are not available yet. And applying for a club call is free.

>station.

In the past if you where given coordination for a frequency pair, you had
to specifically state whether or not the repeater was to have an open
or closed status. You could change the status from closed to open, but
from open to closed was virtually unheard of. The Los Angeles County
Disaster Communications was going to have secondary status on a pair
which was a closed system. The problem was getting a site to house the
repeater. They were going to house the repeater on county owned radio
site, but to do so the repeater had to be open. The station that was
given primary coordination did not want to change the status for the
pair because he would lose the status of a closed system.
Here in SOCAL, frequency coordinators DO CARE whether or not a system is
open or closed. This applies to the 2m spectrum as well.

>
>>I really think the 440 spectrum has to be re-drawn. There has to be a

>within their own systems. Do you know what the criteria is?

SCRRBA has no distinction between high level or low level repeater coverage.
Their main concern is minimizing interference between repeaters. There is
one particular repeater that has low level coverage, but the trustee has
coordination for that pair for the ENTIRE SOCAL. This means no one else
can put a system on that same pair because that trustee doesn't want anyone
else on the pair. I have no idea why SCRRBA doesn't allow another system on
that pair, but it is completely ridiculous.
As to how groups re-use frequencies, they just basically have to get the
okay from the trustees that hold the coordination and then go to SCRBBA.

There is no fair way to administer the re-draw of the spectrum. The
existing band plan is antiquated and needs to "open up" to serve the
ham community.

>>Another
>>part of the amatuer community that has been virtually ignored on 440 are
>>those that work simplex. Currently the only frequency that can be used
>>for simplex is 446 and 446.5.
>
>The amateur band is from 420-450 MHz. I'm sure there is plenty of simplex
>space below 440.

The majority of hams work FM and that means they can only use
440-449.975. There is NO FM simplex voice allowed below 440.

Here is the SCRRBA band plan

420-430 Two-way Aux. Links & ATV
430-438 ATV SSB AM CW OSCAR
438-440 One-way Aux. Links & Packet
440-450 Repeater & Remotely Controlled Stations (I/O) FM only

No. Roy Tucker does not tolerate unlicensed operators on his repeater.
Nor do the majority of motley hams that use the repeater.

I've listen to Mr. Tucker talk about this matter and it is clear to me
that he is just collecting neat call signs. He has no intentions of
using all the club calls he has on file.

After all applying for a club call is free.

Hi,

With reference to your recent comments about contesters, I thought of you when I saw the following:

With apologies to Darwin, it's obvious that ham radio has three distinct classes of people, each with its own evolutionary destiny:

1) Hard core contesters who will evolve into godlike non-corporeal beings who rule the universe (except for those who work only phone contests).

2) Contester wannabes who try to pass as knowledgeable but secretly lurk and copy 2 or 3 exchanges to get the call and serial number before attempting their own exchange. This group will gravitate toward jobs as high school principals and operators of pet crematoriums. Eventually they will become extinct.

3) Non-contesters who will grow tails, sit in zoos and fling dung at tourists, while chanting "Please QSY -- there's a net down 10KC and it's been there for 40 years."

73, de Hans (Grinning, Ducking, and Running)

The only experience I have with this occurred when I was frequency coordinator
in Dallas. The FCC didn't hit the guy very hard with the club... :)

What they did was get the two guys in a room and tell them "work it out".

Yes! I've seen this "bicycle" at an InterOp conference in Washington, DC.
Check this URL: http://microship.ucsd.edu/ for a photo of the BEHEMOTH
(that's the name of the "bicycle"...). This information is from the page:

You've probably seen it by now - the $1.2 million, 580-pound, 105-speed
recumbent bicycle on which nomadic author Steven K. Roberts lumbered
17,000 miles around the US. With handlebar chord keyboard, console
Macintosh, satellite Internet link, 82-watt solar array, distributed
control system, cellular phone with modem and fax, heads-up display,
speech synthesis, helmet cooling, multimode ham radio station, security
system, GPS navigation, CD stereo, SPARCstation, on-board R&D lab and
much more, BEHEMOTH is an autonomous mobile office and development
environment. It has been widely publicized in print and electronic media,
ranging from the Donahue show and the Wall Street Journal to the most
esoteric of industry trade publications.

Here in Idaho, the fee for ham plates is the same as for standard plates.
The only difference is that I have to go thru a central location in Boise
by mail rather than just dropping down to the local license plate office
to renew.

W3LPL (or was it K3ZO ?) has found the source of this interference, and posted
his findings on the cq-contest reflector. Apparently, it is a spurious signal
from Radio Vatican on 7305 kHz.

Anyone have inside connections with the Pope ?

SB PROP @ ARL $ARLP024
ARLP024 Propagation de KT7H

ZCZC AP92
QST de W1AW
Propagation Forecast Bulletin 24 ARLP024
From Tad Cook, KT7H
Seattle, WA June 2, 1995
To all radio amateurs

SB PROP ARL ARLP024
ARLP024 Propagation de KT7H

There were five consecutive days recently with no sunspots at all. Solar flux over the past week stayed below 70, and averaged 10 points lower than the previous period. Geomagnetic conditions were also stormy, making conditions poor all around. The current poor conditions are caused by a recurrent coronal hole, and should last through June 3. Another expected poor period is due from June 12 through 16, with the same cause.

Solar activity is expected to stay low. Somewhat higher flux is expected by the middle of the month.

Sunspot Numbers for May 25 through 31 were 0, 0, 0, 13, 17, 13 and 12, with a mean of 7.9. 10.7 cm flux was 67.1, 66.3, 65.8, 66.6, 66.8, 67.5 and 68.9, with a mean of 67.

The current path projection is from Ohio to West Central Africa.

80 meters should be open from 0100 to 0400z, and 40 meters from 2330 to 0500. Check 30 meters from 2230 to 0545, and 20 meters from 1930 to 0200. The higher bands do not look promising given the low solar activity.

4137. This Week in Amateur Radio #114

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-02 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <5k8ekb6.sanderman@delphi.com>
Source record: 245299

Here is a summary of news items covered on edition #114 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 9-Jun:

1. STS-70 Carrying SAREX Set for Thursday Launch Postponed
2. W1AW Receives Donation of Complete HF SSTV Station
3. PANSAT Spread Spectrum Satellite Readied for 1996 Launch
4. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
5. Weekly Propagation Forecast with George Bowen, N2LQS
6. Manitoba Group Offers "Worked All Winnipeg Award"
7. CANWARN Survives Despite Budget Cuts
8. "EZSATS" with Dave Mullenix, N9LTD
9. WEBERSAT/OSCAR-18 Experiences Software Crash, To Be Reloaded
10. Upcoming Special Event Stations
11. "Amateur Radio Newsline" - Edition #929 from Los Angeles
12. "The RAIN Dial-up" from Chicago

Funding for the program's transmission and production expenses was provided by a grant from the Blue Ridge Video and Digital Society of Roanoke, Virginia, where "This Week in Amateur Radio" is heard on the WB4QOJ repeater on 145.21 MHz, serving amateurs in Virginia, Kentucky, West Virginia, and North Carolina. Acquisition costs for the "Amateur Radio Newsline" have been provided by a grant from Mark Ross, KO6DG, and Scott Press, KD6YWA. Satellite time and uplink equipment have been provided by SKYVISION as a service to the amateur radio community.

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a New York State not-for-profit corporation based in Albany, New York. The program is carried on the "Tech Talk Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @

>on hold, I'd say that there is intent for it to be present. It is
>the control operator's responsiblity to ensure that any third party
>content transmitted is permissible. This isn't.

There's intent to have that music present on the phone line, but I don't see anyone intending to transmit music over amateur radio. THAT is what the comments about "incidental" mean.

But you've hit the nail on the head -- 97.115(b)(1) requires a control operator to be present at a control point during third-party operation, and that operator ought to mute the music on hold.

To: Emergency Management Agencies via Amateur Radio
Info: Communications Volunteers in Government Service
Info: Amateurs U.S. (@usa:Information), ACS, CAP, MARS, RACES
>From: Auxiliary Communications Service (ACS), the volunteer communications reserve of the State of California
Governor's Office of Emergency Services

RB381 for release 6/5/95
MGT - APCO and the Radio Officer Pt. 2/2

Remember this: the least desirable question a key volunteer can ask is, "What do you want me to do?" The general reaction to this in government: "If you don't know, how am I supposed to?". Such a question in the mind of the unit leader(s) means they don't know local people or systems thoroughly enough. In a way, it is rather like the person who wants to work for Company A and submits a resume or application, hoping to be hired. In contrast, a more astute person will study the company, its products, people and services and carefully design an approach to fill an apparent need of the company (rather than wait to be called) - and IS hired.

What this is saying is that key volunteer's acceptance by paid staff and their peers is absolutely essential. To be effective, it's more important WHO the key officers know than WHAT they know. When the Radio Officers don't know the people, they will be considered of relatively little use, in effect, an outsider. There is a way to become better acquainted outside of the agency. That is through membership and attendance in the local APCO Chapter meetings. APCO stands for "Association of Public-Safety Communications Officials". Participation allows Public Safety communications administrators, technicians, engineers, planners, operators and manufacturers to network. It can provide the Radio Officers with a thorough understanding of the Public Safety radio systems and PEOPLE. APCO does not require that the person be a paid government employee. For information on the nearest chapter, call 800-949-2726. Accordingly, APCO membership is strongly urged for the Radio Officer, even if the Radio Officer has to pay for it without reimbursement. It's that important!!

4141. Re: ? Open 440 repeaters in SoCAL ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-02 00:00:00 UTC
From: jeff@HawaiiEdu
Message-ID: <D9K9pE.9n@news.hawaii.edu>
Source record: 245303

Not carefully reading, gary@ke4zv.atl.ga.us (Gary Coffman) fires off:

>jeffrey@math.hawaii.edu innocently suggested:

>>Why not encourage more simplex operation?
>>Given the density of hams in SoCal simplex should be quite fun. You
>>folks need to quit relying on someone else's radio (i.e. repeater)
>>in order to have fun with your own.

This was only a suggestion, not an advocation to eliminate repeaters.
Yet, Gary didn't read it carefully, for:

>As usual, Jeff, you don't seem to have a grasp of the issues.

Oh really, Gary? I grew up in Southern Calif. when there was only *one*
repeater in L.A. - and it was AM (Art Gentry's K6MYK on Mount Lee in
the Hollywood Hills). I saw the FM craze start first with simplex on
146.76, then remote bases, then an explosion of repeaters eventually
filling every pair.

Simplex on .76 filled the San Fernando Valley - those within the valley
were able to QSO quite well without a repeater. Same within the L.A.
basin.

>Repeaters aren't primarily intended for random one on one
>QSOs.

The same could be said of simplex operation. On .76 round-tables
would last well into the evening, just like what currently occures
on repeaters. The simplex frequencies served as `watering holes'
where those with common interests would congregate.

> They serve as
>a common medium for geographically diverse groups to meet and
>converse.

Geographically diverse? We're not discussing 80 or 40M here, Gary.

>The key word here is "group". The repeater allows a
>group of people, not all of whom are in direct simplex range of
>each other, to converse without losing the context of the
>discussion through being unable to hear all the participants.

SoCal is blanketed many times over with repeaters - I'm only suggesting
that rather than installing more of them, we instead encourage simplex
operation. At no time did I advocate doing away with them. As usual,
you're falsely alluding to things that were never mentioned.

>Repeaters often serve as "watering holes" where groups with
>common interests gather to talk and exchange ideas. A simplex
>frequency is usually unsuitable for this purpose at VHF/UHF,

Simplex served SoCal quite well in the past. Why radiate a signal
over a 100 mile radius if you're `group' (keyword) is within 10 miles?

I don't recall you mentioning that you ever resided in Southern
California, Gary. How can you possibly know the limitations
of simplex in that area?

>to avoid the crowds?

Good point! The 30 meter band is an excellent place for digital
operations away from the contest crowd. Unfortunately for the
SSTV gang, however, that mode isn't allowed on 30 meters, and
the higher WARC bands are currently in the doldrums due to the
the solar cycle bottoming out. Looks like they're stuck on 40
and 20 for the time being.

4144. Tucker family callsign update

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-02 00:00:00 UTC
From: an278108@anon.penet.fi
Message-ID: <141305Z02061995@anon.penet.fi>
Source record: 245335

>Tuckers seem to be the only family with multiple club call signs in
the
>entire country. We still wonder: what on earth are they planning to do
with
>them?

I believe I can shed some light on this curiosity. First, a little background on Mr. Tucker. Roy Tucker is a retired college professor with a lean to the left. From my observations, he's always been somewhat of an eccentric on amateur radio. That may manifest itself in the fact he is the proud owner of the 147.435 "animal farm" repeater in Los Angeles, California.

The 147.435 repeater is most certainly the greatest embarassment to amateur radio in the U.S. today. It has attracted and served as a haven for every socially misfit licensed ham and non-licensed operator in Southern California. It has even had notorious past users such as Richard Burton the ex-WB6JAC, who has the distinction of the being the only amateur to serve time in prison for radio violations, and hacker du-jour Kevin Mitnick N6NHG. The users of this system have elevated violations of FCC part 97 to an art form. Yet, for some strange reason, the FCC has chosen to avoid the pursuit of violators even though it would be like fishing with a gill net.

So, why is Roy Tucker scooping up all those club calls? I dunno. I guess his actions are as eccentric as the repeater system he owns. But I'm sure he'll keep filing more applications in the coming weeks.

Oh, yes, I guess you're wondering why I've sent this anonymously. There is a violent side to the animal farm. Vocal detractors to this system have been threatened or attacked by some of the more sinister members of this primordial soup. Weapons of choice have been pipes and handguns. I value my life, therefore I remain...

The good news is, there aren't many users or trustees on 440 in Southern Cal. The freqs are lightly used. Therefore no doubt your Texas experience is inapplicable to the situation here in Southern Cal.

The problem is eminently solvable.

3 years to get everyone to go to 15 Khz spacing doesn't sound all that unreasonable. Anytime a lot of people all have to do something like that, it takes time.

The coordinators do have a club, it is 97.205c. The system to which
they grant coordination becomes primary under 97.205c, and any system
that causes it interference is primarily responsible by regulation to
rectify the problem. That's a pretty powerful club.

Sure, Icom even has a HT with a removable faceplate, silly as that may
seem. Many of the newer mobile rigs have what they call remotely mountable
heads. In essence, those are just removable faceplates that can be used
with a remote mounting cable if you want to put the radio in the trunk
and the controls on the dash. If you buy a Kenwood, however, and someone
steals the faceplate, you're screwed because Kenwood doesn't sell replacements.

From: John Mullan <jmullan>
Message-ID: <3qnc5c$i18@canyon.sr.hp.com>
Source record: 245342

I think part of the answer is to question the intent. Is the series of keys a phone number being dialed, or a control sequence, or is it intended to be "Mary had a little lamb". If the musical value is incidental, then no problem, but if the intention is to entertain, or irritate by providing a musical interlude, then the action would fall in the realm of the illegal.

>John, you missed my point. The coverage is already duplicated many times
>over on *other* bands. Why dump more high level RF into the environment?

Why SHOULDN'T we have more repeaters? If we were to subscribe to your line
of thinking, everyone in amatuer radio should be content with a single band.
Radio spectrum is the hottest item. Five years ago, the amatuer community
was dying. Now with the no-code we have more hams than ever. The bands
are conjested on 2 meters. Finding a good high level coverage repeater
in CA may not be a problem, but chances are it will be occupied.

>No matter where you live in SoCal you can find a repeater on *some* band
>to suit your needs. I personally feel a freeze on new repeaters should
>be implimented unless one can justify with good reason the need for
>installing one.

If that's the case, then there should no private or closed repeaters AT ALL.
Why should there be any private/closed repeater if you can find a repeater
on "some band to suite your needs".

Fact of the matter is most people have 2 meters and 440 FM radios. With
2m conjested, 440 under utilized why shouldn't 440 open up? Why did
the ham community worry about losing their spectrum from lack of use?
>
>Given the density of amateurs in SoCal simplex operation should now
>be widely encouraged.
>
Here we go again. I can't find a clear simplex frequency to use on 2m or
440. 440 FM in SOCAL only has 2 frequencies allocated to simplex. Tell
me how with the given density of SOCAL can you use 440 for simplex if you
have only 2 frequencies for simplex?

In article <3qlp3kkme1@perth.DIALix.oz.au> daveb@perth.DIALix.oz.au (David Brooks) writes:
>The title says it (I assume it's a modulation scheme).

Yes, Minimum Shift Keying. The term is used to cover a whole family of encodings. The coherent members of the family have nice smooth spectrums without extraneous sidebands humping up out in the beyond. The simplest non-coherent member of the family is just FSK with a very narrow shift, IE the shift is exactly 1/2 the baud. For example, a MSK 1200 baud signal would have a shift of 600 Hz. This is the same as saying it uses a modulation index of 0.5. For HF 45 baud RTTY, the MSK shift would be 22.5 Hz.

The occupied bandwidth is a function of the fundamental frequencies involved, the shift, and any extraneous mixing products that are an inevitable part of the modulating process. If the encoding is coherent with the RF (IE the data clock is synchronized with the RF at some submultiple), these will be minimized, and occupied bandwidth will approach the ideal minimum bandwidth required by information theory for this form of encoding. MSK should yield 0.5 Hz per baud, but in practice it can only approach that figure.

The GRAPES modem achieves 1.4 Hz per baud in practice at the 22 dB down points on the spectrum. It does that by using phase quadrature modulation with a 3 dB amplitude component added. It's non-coherent, but that's still darn good. Constellation photos are included in the manual that make this fairly simple to understand. The key thing that gives a smooth spectrum is that the phase vector never has to pass through the zero point, as it must in BPSK, when transitioning from one state to the next. That removes the characteristic series of humps extending out to each side in the BPSK spectrum.

Separate from MSK, but important for spectrum conservation, are a couple of other points. Using NRZI so that the presence or absence of a transition at the bit center determines whether it is a one or a zero simplifies things, as does the use of a data scrambler. It means there is no identifiable mark or space frequency, unlike conventional RTTY practice, so there is no double hump to the output spectrum, and you don't have to worry about being tuned upside down as you do with conventional RTTY FSK. It also means you can delete the start and stop bits. This drops your required bit rate per character by 20% or more.

Of course this means you now have to do clock recovery, but that can be turned into a plus because sampling at a multiple of the recovered clock can yield correlation gain in reception. (If modulation is

coherent with the carrier, this can yield a *huge* gain, but even with non-coherent modulation it still can be good.) Using a tracking data detector (adaptive slicer) allows you to follow tuning errors. And if you use an interlaced block coding with FEC, you can defeat nearly all impulse noises common on HF by "smearing" the error across several data words so that the FEC algorithm can still easily recover the damaged bits. Good algorithms can recover error runs of 8 to 12 contiguous bits without excessive overhead using this method. That's generally longer than the longest burst error commonly found on HF. (IE a string of dits sent by a CW jammer won't faze this system at all.)

If you don't require 100% error free transmission, you can use interpolation on the block coding to hide the residual errors. This is useful for digital voice and digital video, but won't do for computer binaries. (Whew! Probably more than you wanted to know.)

Personally, I prefer not to have ham tags. Not primarily out of fear of theft, but rather for a greater degree of privacy. If a screwball wants to get your name and address from a tag, it's not that hard if he knows it's a ham call and knows where to look you up. Sure, he can also go to the DMV and get the info, but here in Virginia we can now "opt out" of making our records available to the average citizen.

In years past, when when we had fewer psychopaths than we do now, I did have ham tags, but found them mostly without any real value. If i did wish to advertise my hobby at this point, I would opt for tags that said something like "LETS QSO" or something equally obscure to the non-amateur with larceny in his heart.

Message-ID: <9505028021.AA802123211@ccmail.cmc.comsat.com>
Source record: 245351

Since my posting yesterday, I have called the local (Laurel, Maryland) FCC monitoring station to enter an interference report and also to see if this signal had been reported by others.

A search of the data base indicated that it indeed had been reported at least once previously, and that although it had been monitored, there was no resolution as to what the signal was nor its source.

In case you want to follow up on the progress of my report with your nearest FCC office, it has been assigned the case number LR9500209. It was filed on 2 June 95.

Hope we find out what this is and get it out of the 40 meter band. Does anyone have a *calibrated* reading of the signal strength? Or a way to get a bearing on it? It was about 40-50 microvolts at this location the last night or two. (Thanks to WB4DPT for his response with additional historical info).

John...

4161. Re[2]: 40 Meter Interference (Spread-Spectrum?)

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-02 00:00:00 UTC
From: John.Klingelhoeffer@comsat.COM
Message-ID: <9505028021.AA802123213@ccmail.cmc.comsat.com>
Source record: 245352

My earlier message on this subject indicated an incorrect case number. It was assigned FCC case number LR9500210. During the interim, mail from WA6SDM noted that a correlation had been found with broadcasts from Radio Vatican.

I reported that to the FCC monitoring station, who said they did not have that information in the interference reports, nor had RV been notified (as, it sounded like, other broadcast stations had) about this interference.

Thanks and 73

John...

>I would THINK so, but it's not "music" in the pure
>sense of the word.

Why not? It's intended to be music, it produces a recognizable melody, it's music. If playing the spoons can be music, so can playing a TT pad. Since it isn't incidental, because the person is intending to play "Mary Had a Little Lamb", it's prohibited.

Note, just hitting a sequence of TT digits won't play MHLL, you have to use a specific intentional cadence and tone duration to get a recognizable melody. That's what makes it music rather than a command sequence. The TT system doesn't require variable tone durations and cadences to operate. Now you'd have a better case for incidental transmission if you were to consider the Morse "V". It's a valid letter symbol, but it's also a recognizable part of Beethoven's Fifth Symphony. Is it music? No, because it has to sound that way to be a communications symbol. That it is also recognizable as a musical sequence is incidental to its intended function.

: that I can not use an autopatch to order a pizza on my way home from work.

Yes, that used to be the case. The regs have recently changed,
though. Under the new rules, it's legal to use the radio for
business-related purposes, as long as they don't benefit you financially
(or your employer(?)). IOW, if you worked for Domino's, you probably
couldn't call them for a pizza. You can't use the autopatch to call your
office for messages.

If it is like the IC-725 then it operates at 5v instead of RS232 levels.
Tx and Rx from a UART are wire-ORed together. An 80C51 should make a
perfect controller and that's on my to-do list. In the IC-725 it is
called the CI-V control system and information is available in the
mods section of a number of internet servers.

Well, for one the test sure isn't what it was umpty-ump years ago. Then
also
way back you had to have a license for at least a year (or was it more)
befor you could sit for the test......I got mine about 20 years ago....but
the older timers had to actually draw schematics...and at one time there
were oral quaetions...that would smoke out the guessers.

The local stores here don't act like that at all. If you don't want
on the list, they're just as happy to comply as if you do.
Personally, I don't mind getting the flyer and at least they don't
sell or rent their mailing list like so many other companies do.

Not always true. In the past I've been asked to move off to another
frequency when I was using a repeater output. In fact the individual
identified himself as a trustee and proceeded to key the repeater over
our QSO.

There was no QSO going on when we entered the frequency.

This has been the case on most closed frequencies. Repeater trustees
sometimes forget that they don't own the frequencies their repeater resides.

I like your idea, but I think it would involve too much paperwork
to work. A coodinating body that would be responsible for this
coordination would have more headaches than what I suggested (IMHO).
The strong point with your idea is that no repeater trustee would be
guaranteed a pair each year (an aspect I like, but one a trustee would
despise). But who would do the judging or voting? Ultimately this will
be a problem all coordinating bodies will face.

The criteria for what constitutes operating in the general amateur
community's interest would need to be ratified by the area's general
amateur population. Individual renewals of coordination could be handled
by an administrative hearing panel convened by the coordinating body.
This panel would apply the approved criteria to the competing filings
and make a determination based on a defined "points" system that is
part of the ratified consensus of the general amateur interest of the
area.

It shouldn't really be all that cumbersome. In most cases it would
be a simple check off list. Only when one or more scorings of the
criteria ratings are in dispute would witnesses need to be called
to establish the validity of one or more party's claims of fact.
The broadcast community has had to deal with this sort of system
for decades. It really isn't that big a burden, even to the smaller
AM stations with limited personnel and finances.

Gary

4184. IPS Daily Report - 02 June 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-02 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <3qo60o$614@flare.syd.ips.oz.au>
Source record: 245375
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 02/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 02 JUNE AND FORECAST FOR 03 JUNE - 05 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 01 Jun
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
03 Jun 04 Jun 05 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 03 Jun: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 01 Jun
Learmonth 13 3333 3322
Fredericksburg 14 24
Planetary 15 25

Observed Kp for 01 Jun: 5453 4433
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
03 Jun 13 Unsettled
04 Jun 12 Unsettled
05 Jun 8 Quiet to unsettled
COMMENT: Geomagnetic activity has declined.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

02 Jun normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Jun normal normal fair
04 Jun normal normal fair
05 Jun normal normal fair
COMMENT: HF conditions should steadily improve.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
02 Jun 4 slightly below predicted monthly values

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
03 Jun 15 Near predicted monthly values
04 Jun 15 Near predicted monthly values
05 Jun 20 Near predicted monthly values
COMMENT: IPS HF Communications Warning 18 was issued on 26 May and is
current for interval 30 May to 5 June. MUFs at Townsville were near
predicted monthly values. MUFs at Hobart were depressed 15% during
daylight hours. Spread F observed during local night hours. HF
conditions should steadily improve.

Hi Cecil,

I know nothing about the IC-720A but if you're only interested in going one-way, from the computer to the radio, there might be a 25-cent alternative to buying the RS-232<->TTL converter or the chips. Check the schematic for the radio. If there's a pull-up resistor to VCC (in the radio) on the input circuit (coming from the computer) then you're in luck. Take your RS-232 output line from the computer and stick a high value resistor in series with it (well, probably anything more than 100K-ohms is OK), and then from there to the base of a transistor (lessee... NPN if I'm thinking clearly this late at night!). Take the emitter to ground and the collector to your radio input. Depending on your radio's circuit, you might want to stick in a current-limiting resistor in the collector circuit for short-circuit protection. I wired this all up inside the RS-232 plastic connector and it worked just great for my Yaesu FT-757GX-II (I've got something similar for my FT-890). Total cost, about 25-cents if you buy the parts new at an expensive store (not counting the cable and connectors, which you gotta build up anyway). Compared to the $69.95 or some outrageous price Yaesu wanted for the RS-232/TTL convertor, it was a bargain. Used it for years without any problems whatsoever. The circuit is a simple transistor switch, and should work as long as it's safe to short your radio's input line to ground and as long as ICOM doesn't do anything strange like use reverse polarity. You -might- have to use a PNP transistor, I suppose.

But if you're going from the radio to the computer as well (i.e., radio status info., etc.), then you gotta spring for a real convertor circuit.

RS-232 +12v ==> 0v for my Yaesu input
RS-232 -12v ==> +5v for my Yaesu

If you'd like the exact circuit, I could try to draw it up for you in ASCII text or something. It's very simple. But it's dependent on the radio having a pull-up to VCC on the input line internally.

Once you got the hardware taken care of, I'd be happy to add support for the ICOM to my little TUNE program (a DOS utility that simply lets you quickly set your radio frequency from the command prompt).

>equipment on board. In otherwords is the "vanity" worth it?
>
>Thanks.....best 73...de Dave, N2ZPU.

I have had two vhf mobile units stolen. Whether one can attribute the theft to
the plates or to the radio antenna on the car (a sure sign a "CB" is in
there),
is purely achedemic. My advice, if you really want vanity plates, keep your
car locked and remove your mobile units when your car is unattended. This is
no guarantee of course. The radios were stolen outside the Club Station,
which is located in a not-so-good neighborhood. I would say the antenna is
the biggest giveaway.

EH> : My suggestion would be, use a slide mount (don't use the
EH> antenna or power
EH> : connections) so removal can be easy when you leave it at
EH> night. Also, lock
EH> : your car. One would think after losing two rigs, I would
EH> learn. RIGHT!

Ed is right ... I didn't indicate clearly that the slide mount was for the owner's convenience and not the criminal :). I don't leave it in the car if I can help it. And Ed is also correct in assessing the broken window. That however is more for the insurance companies, some of which prefer paying extra for the proof the car was locked (what a scream).

EH> Of course, locking the car will probably result in a missing
EH> radio *and* a
EH> broken window. I take the approach of leaving nothing in
EH> the car and
EH> leaving it unlocked so they can easily find out that there
EH> is nothing worth
EH> stealing and move on to the next car. Of course, this only

In article <3qmnco$3iu@alterdial.UU.NET> Burt Fisher <k1oik@ccsnet.com> writes:
>Who the hell am I to call CQDX. I have been a ham for over 34 years and
>in 28 of those I could only afford crummy rigs and antennas. There were
>so many stations I could have worked (and called) if they were not
>calling CQDX. I have NEVER called CQDX, although today I am much better
>equiped. Many times when I call CQ I would prefer DX, who am I to
>EXCLUDE anyone. If someone wants to talk to me who am I to be selective?
>When my beam is headed towards DX and I get a domestic call it is
>usually from a station using a dipole, remember all hams are not "Big guns."
>And in reality to be a "real man" is not predicated on how much money
>you have. When you call CQDX, think about what you are really saying
>(calling anyone but no Americans need answer).

Gee, I'm the last one to defend Dxers and their practices, but really,
I don't see anything wrong with directed calls. If I want to talk to
someone in a specific area, for whatever reason, I see nothing wrong
with saying so when I make my call. If I was willing to talk to just
anyone anywhere, then I'd just call CQ. But if I want to talk to a
specific station, I'll call him by his call sign, and if I want to
talk to an amateur in a specific geographical location, I'll make
a directed CQ <location>. If that location happen'd to be anywhere
but the US, then I'd use CQ DX, and continental US amateurs should
respect that contact request and not respond if they don't meet
the criteria. If my station and operating skills are poor, I may
get no response, but that's my hard luck and not anyone else's.
It seems the height of bad manners to respond to someone who
has clearly stated he isn't interested in talking to you right
at the moment.

Gary

William, may I call you Bill? -

I don't think the logic follows. . . if I only speed once a week it's okay
(not a violation); but, if I do it every day . . . well . . .

I've never seen or heard of any FCC rule concerning the frequency of
autopatch usage - with or without pizza involved; but, a specific
repeater/autopatch owner or group may have adopted some standards for their
specific system.

Respectfully,
Walt / KF0OS

On my ICOM it is TTL and to make it RS-232 you need a level converter
Icom sells one or use a MAX232/233 chip.

The data format is a bit strange but there are may free programs
to do control. Some in basic some in C.

Dear Gwoho,

I think this will solve your problems...

73 de Robin VK2VN

I am getting many requests as to exactly where is the
functioning demonstration version of THE Ham Log 3.1 by VK2VN
(the IBM computer program for amateurs to log their contacts) on
the Internet. On two sites, the directory has name has been
changed, as well as a minor filename change. So here is the
latest information I have...

oak.oakland.edu - /pub/hamradio/pc/logging
hamlog3.zip is the only file available

ftp. une.edu.au - /pub/ham-radio/ham-loggers
ham_log3.zip; ham_log3.txt; ham_log3.diz
3 files available.

- /pub/ham-radio/funet/ham/hf-work
hamlog3.zip is the only file available

ftp.funet.fi - in directory /pub/ham/hf-work
hamlog3.zip is the only file available

Ham Log is a professional program that has a enormous facilities
and functions, yet very simple to use. Indeed, USA amateurs are
having the data from their old trusted programs imported into
Ham Log as they are so impressed with Ham Log 3.1. From a review
in The Canadian Amateur magazine:

"This is the first computer program I have in years that I
really cannot find anything to improve on. With so many
features, it is beyond this reviewer's ability to do it full
justice. I rank it [Ham Log] as one of the 'breakthroughs'
in computer technology applied to this fine hobby, ranking
with Baycom, JVFax and Hamcom."

In Amateur Radio Action (Dec. '94)...

"In my position as editor, I get to see and use most logging programs at some time or other and from my first encounter with Ham Log, I have believed it to be the best available - and that includes some quite expensive American programs."

The .zip file is all you need. Do yourself a favour and give it a try. I'm CERTAIN you will be impressed with Ham Log v.3.1. If you have any queries or comments, please e-mail me.

Kind regards,

Robin Gandevia

You folks should live in progressive Pennsylvania. Last time I checked, ham tags were considered as regular vanity tags, at $25 extra every year.

|

Jeezy Peezy Burt! Settle down, huh? Glad you can finally afford a
real station but MANY of us are using 100 watts and wire antennas
and will be for the rest of our lives... and we don't get offended
by people calling CQDX.
Ham radio has lots of facets. Some people like to pursue
operating awards requiring certain combinations of QSL cards
from DX stations. Are you saying they are being rude?
When I am demonstrating the capabilities of ham radio for
friends, I call CQDX because it makes a more interesting demonstration.
If you wanna be that noble, instead of blasting others CQ habits,
do like I do, spend some time CQing at 5 WPM in the novice sub-bands
a coupla times a week.

The problem with implementing this in the amateur service is that the
frequency coordinators have no REAL power. Unless this method were codified
by the FCC, it would never work because the existing trustee could simply
ignore the coordinator and continue to operate uncoordinated.

It is, but it is an easy way for a coordination group to treat everyone the same way. That's what makes it fair. There's no way to guarantee that everyone will get exactly the same chance. How would you do it?

>Looking at how they *act* is a good way to determine how they think.

>trustee members? When is the last time they made an existing trustee
>co-channel with an outsider? When is the last time they solicited
>input from the user community on the usefulness of a particular
>coordination?

I don't know exact answers to any of these questions, although I do know co-channel operation is common in California, at least within the systems I'm familiar with.

>Any coordination body is a de facto spectrum management organization,
>even if their only concept of management is "first come, first served".
>Indeed, SCRRBA is unlikely to be able to dodge the issue much longer.
>Just as they were forced from the coordination job on 2 meters, they
>will lose that job on 70 cm too if they don't face up squarely

I agree. SCRRBA will eventually have to address the spectrum management issues, or someone else will. However, any future band plan MUST take into account the existing systems. If the existing trustees cannot be convinced that the new band plan is better, they will simply ignore it.

..and these trustees control the frequency coordination organization. I understand your frustration, but I also understand WHY it was done that way many years ago.

>Jim, many of the issues you brought up are concerns everyone has to face no
>matter who coordinates. But the fact of the matter is a large percentage of
>hams are in California just look at the prefixes. With the band plan as it
>is in CA, do you really think SCRRBA can effectively serve the ham community
>at large?

They aren't trying to serve the amateur community at large. That's what I've been saying. Frequency coordinators concern themselves with preventing interference between trustees. Only when all the channels are taken do these political issues become important. Until then, nobody cares.

>nothing is being done because they
>don't want any changes because they have a conflict of interest since they
>are also a repeater trustee. A proposal for a change and honest talks to
>changing would satisfy most people.

It's probably more like they don't want to deal with it because it isn't fun. This is a hobby...it's supposed to be fun. Frequency coordination isn't fun, so when trouble starts, it's usually ignored until it gets out of control. At least that's how I react to it.

>This is a problem that will not go away. Unless SCRRBA bites the bullet,
>I'm afraid 440 will suffer the same problems as 2 meters you cited in
>your previous post. SCRRBA can't dance around this for fear of what they
>may face with the folks who have coordinated repeaters. If they do, they
>will never get anything done.

I agree. The problem will get worse until something gets done. I just don't know what the right answer is. I can't support throwing out the existing systems in favor of new ones, but the frequencies with "paper repeaters" should be assigned to someone. It's tough!

However, if there's any hope of success, SCRRBA must be involved. Competition will only make the problems worse. If I were you, I'd find a way to get inside and influence their decision making. If nothing else, it would give a clearer view from the other side of the fence.

A firefighter and Red Cross volunteer from our area is spending 10 days in an exchange program with firefighters in Petrozavodsk, Russia later this month.

His family would love to be able to communicate with him while he is there and using Amateur Radio to accomplish this would be a great demonstration of our capabilities. His wife just happens to be the Red Cross Disaster Services Director for the local ARC chapter, too.

It's slightly (but only slightly :-) embarassing to have to try to set up a sked this way, but my own HF browsing time is limited.

If an English-speaking Ham in or near Petrozavodsk happens to read this and responds to me via mail to kd1sm@iii.net, I would be extremely happy!

Hello.

I am looking for an ICOM IC-2AT 2m HT ("The Brick") in good, working condition.

If there is one available, I'd prefer the seller to be located somewhere in the Greater-Boston area, so I can try the radio myself prior to possible purchase.

If anyone is selling, or knows of a store which may have some in stock (probably used), please let me know.

Thanks much!

Greetings!

My husband and I are newly licencsed radio amateurs (still waiting
for the paper licenses to come in the mail tho'), but my husband wants
to upgrade to Tech+, having twice taken the 5 WPM code test and missing
the multiple choice test by 1 answer! Our question is does anyone
know of any licensing exams going on in Northwestern PA, excluding Erie,
because we live in Clarion and it would be a 2 hr drive just to get there.
I have signed up to the exam listserv, but have yet to get any messages
from it. Is there any where else on the 'net or the Web where exam
schedules may be listed? Thanks for any help anyone can give us!
You can e-mail me at GHJOHNSON@VAXA.CLARION.EDU since I don't get in here
on a daily basis and to keep unwanted bandwidth to a minimum!

Why are so many people hung up on questions about incidental music? I appreciate your concern, but I think we all have better things to worry about. When was the last (or first) time any ham got into trouble for transmitting incidental music?

The more serious concern is that by pressing DTMF keys the repeater could be messed up, or that the person is harassing other users on frequency.

>(Runs from 144-148MHz) ham band when it comes to Cable TV systems in most
>places.

Also, if it is interfering, then I am pretty sure that it means the CABLE
COMPANY is at fault. Supposedly, if your signal is getting into the system
(which is supposed to be "closed") then their signal is getting out... and
the cable channels run across all sorts of services, including thngs like
aircraft navigation bands. There was an article somewhere that detailed how
to find the source and how to approach the cable vendor to fix the problem.

OTOH, it is possible that a cable system in good working order is still
vulnerable, possibly at the cable box... I can nuke Ch.18 and as far as I
know the cable system here has no problems that I know about...

I agree with you completely Gary. Contrary to what this gentleman suggests, directive calls have nothing to do with the type of rig or size of your bank account. "CQ DX" is no more pompous than "CQ QRP", "CQ Texas" or "CQ my dog".

The suggestion that it is uncharitable to generate a CQ that excludes certain hams is entirely unsupportable. There is nothing mean-spirited about operating SSTV, Packet, or space communications, but many hams don't have the equipment for these modes and couldn't possibly take advantage of the QSO.

Burt, if you want ot make sure that anyone can answer your CQ's, then by all means do so. Just don't imply that the rest of us are somehow negligent in our duties for desiring to make the most of the time we have available.

I write, pointing out one of the "incorrect" questions in the Novice question pool:

>N1A05 (A) [97.1]
>What are three reasons that the amateur service exists?
>C. To preserve old radio techniques, maintain a pool of people
>familiar with early tube-type equipment, and improve tube radios

Jeff NH6IK responds:

> I think you're confused by the ambiguity due to a misplaced hyphen.
> The 2nd and 3rd statements mention `tube'. Thus, the first statement
> should actually be read ``To preserve old-radio techniques''. You're
> reading it as ``To preserve old radio-techniques''. To me, these
> have very different meanings.

I will accept that it means "to preserve old-radio techniques" rather than "to preserve old radio-techniques" or "to preserve old radio techniques" :-) I do think this is kind of a weak argument, though.

> Note also how the question is stated: ``What are three...'' not
> ``What are *the* three...''. By asking ``What are three...'' they're
> not ruling out the fact that there are more than three.

Yes, that's correct.

I continue to write:

> No mention
> is made of preserving the radio art.

Jeff quotes this in his follow-up. I don't know if you have an argument with this part or not, Jeff. I'm going by the following paragraph.

S 97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:
(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service

of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to
enhance international goodwill.

That's all there is to the legal basis and purpose of Amateur Radio in
the U.S. Still no mention of preserving the radio art, only advancing it.

Gary is right. This is third party traffic. And the rule on incidental music is actually pretty straight forward: The only time "incidental" music is allowed is when a station is retransmitting signals from a *government* radio station between the space shuttle and its associated earth stations.

But here's a twist that can be discussed. Most would consider the autopatch on a repeater to be an ancilliary, user function - not a control operator function. There are many people with autopatch access on repeaters that are not considered control opertors. Who would be held responsible for a violation of 97.113(4) in the case of M.O.H.? Technically the repeater control operator, not the user. Right?

You fail to mention wether the TV is hooked up to cable, and if so does it only jam channel 18? The reason it does that is because channel 18 is the 2m (Runs from 144-148MHz) ham band when it comes to Cable TV systems in most places.

Actually I hate to say it but the RS slide mounts work just fine. Only thing is that you can't use the antenna connector on the thing. If you've got a Yaesu FT-5100 the bracket just snaps on and off and the power connector is fairly convenient too. I used a mag-mount antenna with my setup and used to pop it off the car and take the radio with me. So ham tags wouldn't make a difference even if I had em'.

Right.... a repeater trustee has the ultimate say in what can or cannot go over a repeater. Notice I say repeater and not frequency.

Now then, last I remember wasn't incidental music (ie. music-on-hold) ok???? Unfortunately I'm in my office as I write this and don't have a copy of Part 97 handy. Horrors!

Here in RI ham plates are freebies too.. and vanity plates run $60.00 a year if you want em'. Regular plates are $30.00 a year. I remember the days when vanity plates were $21.00 a year - {sigh}.

> ps: and yes, 99% of the population haven't a clue. That includes the

> delta quebec'. That isn't a possible commercial or private plate
> value around here, and I think he figured I was shitting him.

Heh.. here in Rhode Island a regular passenger car plate is known as a Type 01... ham plates are Type 18. When the local (and I would imagine State) cops do plate lookups they don't include the type, it's assumed as 01 for cars and whatever other codes there are for commercial plates,etc. So guess what, the DMV responds that the plate doesn't exist. This leads to some amusing times, just ask KD1HZ who had the police banging on his door at 2AM because he parked left of center vs. right and they went to check the plate.

4225. Open House: PI4ZLD

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-03 00:00:00 UTC
From: eddy@miepmiep.HZeeland.NL
Message-ID: <9506030717.AA05330@miepmiep.HZeeland.nl>
Source record: 245252

Radioclub De Bevelanden PI4ZLD is holding an Open House.

Open House on 17th and 18th June

At the above mentioned dates, Radioclub de Bevelanden will hold open house to commemerate it's 7th birthday. We will be open to the public on Saturday between 10 AM and 11 PM (local time) and Sunday 10 AM to 6 PM.

The Radioclub was established in 1988 by members of the Dutch Radio Amateur Organisations from the district of North and South Beveland and out lying districts, with the purpose of having a real club house which could be used for all amateur activities.

The club house is located in an old building which was formerly used as a tracking station by the Dutch Telecommunications Authority's and is located 2 miles North of the town of Goes, near a village called Wilhelminadorp.
The location's best attraction for Radio Amateurs is the excellent HF radiation given by the very low ground resistance, this has been confirmed by good contest results.
Also the packet node PI8GOE is installed in the clubhouse, and maintained by members of the Radioclub.
Every last Friday evening of each month the club is open to members of the VERON region 33 for their monthly meeting, where they can drink a nice cup of coffee and have a nice eyebal qso.

During the open house members will demonstrate the various aspects of the radio amateur hobby. There will be demonstrations given on HF, CW, AMTOR, RTTY, with old and new equipment, also modern techniques as VHF, UHF SHF, SSTV, Packet Radio, TCP/IP, World Wide Convers, Internet and World Wide Web.
Btw, we will have a direct link to Internet during the open house.

Maybe you cannot visit us during the open house, but we are open 52 weeks in EVERY year, just call us on the local repeater PI3GOE, QRG=145.125 (input) +600 khz shift.

>Gil,

You forgot to mention the fact that music lends itself as broadcasting - to
other than hams. IMHO, it's not so much the bandwidth of the signal as
much as it is the intended (or more specifically "non-intended")
listeners of the Amateur Radio spectrum.

I agree with most posters, ask not to be placed on hold - FCC Rules, etc. .
. . and, if you're surprised - it's incidental. The "surprised" excuse
only works so long.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 JUNE AND FORECAST FOR 04 JUNE - 06 JUNE

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 02 Jun
Daily Proton Fluence >1 MeV: 6.3E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 1.4E+09 (very high)
X-ray background: A1.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Jun 05 Jun 06 Jun
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Jun: 77/16

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 02 Jun
Learmonth 15 3333 3333
Fredericksburg 15 19
Planetary 15 16

Observed Kp for 02 Jun: 3444 3333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Jun 12 Unsettled
05 Jun 8 Quiet to unsettled
06 Jun 8 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 15 was issued on 26 May and is
current for interval 29 May to 5 June. Geomagnetic activity is
expected to remain at quiet to unsettledlevels until 11 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Jun normal normal fair
05 Jun normal normal fair
06 Jun normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
03 Jun 8 near predicted monthly values

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
04 Jun 15 Near predicted monthly values
05 Jun 20 Near predicted monthly values
06 Jun 20 Near predicted monthly values
COMMENT: IPS HF Communications Warning 18 was issued on 26 May and is
current for interval 30 May to 5 June. MUFs at Townsville were near
predicted monthly values. MUFs at Hobart were slightly depressed.
Spread F was observed during local night hours.

If you are considering a phone patch or even having the two parties
involved in the shack on each end be advised that we (USA) have no third
party agreement with any Russian country. This means it is illegal for
them to speak to each other via Ham radio. YOU can talk to a Russian ham
but they cannot. They are both "third parties" unless they both hold
amateur licenses.

A > Roger J. Buffington

Roger, just what is your problem? It seems like I have read a 100 or more messages from you on this subject but it would appear that your concern is with what YOU consider to be appropriate in SoCal. I have read of no support here for your contentions by anybody else there in So Cal. Has it occured to you that there just might be others in you area who have no objection to the status quo? What about THEIR desires. As an individual Ham you surely don't think that you speak for everyone out there, or do you think that? You sure as hell don't speak for me or hundreds of my circle of Ham acquaintances who believe that the coordination process AND coordinators now in existence are certainly not perfect but as close as it can get considering the years of effort that have been put into the process. On the subject of "perfect", tell me *anything* that is perfect!

You have not stated once, that I recall, just what your objective is in your ongoing tirades.

Are you/Have you:
1. Practicing here in argument in preparation for your
hoped for upcoming court room dramas? I have no idea what
number of years are required for completion of graduate
school work in Law is in California, but in Oklahoma it is a
three year course work degree. You say you are "two years
away" from graduating and offer that as explanation for your
expertise on the subject of Law having to do with various
subjects here. If you are only 1/3 the way toward completion
of your Law degree then I submit that your pompous
pronouncements regarding the Law may be a bit premature.
2. Been "run off" or banned from one or more repeaters? For what
reason? Perhaps it is your know-it-all attitude?
3. REALLY been unable to find a frequency where you can
make/have a conversation with another Ham? I don't believe
you if you CAN answer *truthfully* that this is the case,
simplex or repeated. BTW, do you own a radio?

From my observation in reading your posts, I think you are just another
deadbeat who wants the privilege of using other peoples
repeaters/equipment without paying for that privilege. Tell me what
your law books have to say on that subject. And don't start citing the
FCC regulations concerning "no Ham can own a frequency". Instead tell me
about the Laws concerning private property and the use thereof.

As for 15 kc spacing, it won't work. Dig out some facts on "desense".

I hope for your futures sake that you spend as much time studying the
law as you do here. Or perhaps you have "means" and require no income?

>down to those frequencies? Can it just be tuned or will components need
>to be replaced? The duplexer is a DPLXU45 and the amp is APU45A.

Dan, I don't know this particular unit, but I can offer some general advice. Normally, a repeater that operates in the 450-470 MHz range can be brought down to the amateur range with simple retuning, or at most replacement of a few capacitors. It's the ones with a bottom limit of 460 MHz or 470 MHz that you have to watch out for. Those generally will require considerable component replacement, often including the expensive mechanical cavity structures in the receiver and duplexer.

The only gotcha you are likely to experience is if the unit is synthesized rather than crystal controlled. If it is synthesized, it may not be possible to program it for the amateur range. This is a full stop situation. You'd have to redesign the frequency determining circuits of the radio to use it, and that's generally not worth the effort.

And not to belabor the obvious, there is the price/performance tradeoff to be considered. If the unit is going to cost you more than equivalent GE or Motorola gear without delivering better performance, it's probably a bad deal. Also consider that there is a huge selection of GE and Motorola components available surplus should you need to replace parts, and that the amateur community has a large number of individuals with experience working on GE and Motorola equipment. If you need help with the Wilson, you may have a hard time finding someone knowledgeable about it to assist you.

If the price is right, you can move it down easily, and you feel comfortable that you can service it economically when it needs service, then go for it. Otherwise, I'd think carefully about buying it.

If you have a reason other than a general desire to work DX I certainly can understand a directed CQ. For example if you have relatives in a DX country.
Or for many other more specific reasons.
But to call CQDX accepting any country but the one you are in stinks.
If you were dating would you put an ad in the paper that said whites only?

Right, the repeater trustee and any designated control operators jointly
share culpability for such a violation, 97.103(a). That's why repeater
owners are so sensitive to this subject.

>
>You email vk1aa@vk1aa.ampr.org this will probably get through.

That has essentially zero chance of getting through. Net 44, IE
ampr.org, is disjoint from the internet. Your mailer will get a
host unreachable message if you attempt this. Even if the amateur
TCP/IP subnets were interconnected with each other, and the net
joined to the internet, this address form would only work for
amateurs with active TCP/IP stations up and running at the time
of the mail transmission.

The first thing you must do is discover a gateway site on the
internet which will forward mail to the amateur networks. You'd
then mail the message to *that* gateway's internet address.
The gateway will then have some mechanism for selecting
the destination amateur's packet address out of the body or
header of the message, *very* gateway dependent. The gateway
will then introduce the traffic into the amateur system after
having rewritten the address to the proper form for amateur
delivery.

Now if the gateway has direct TCP/IP net 44 subnet connectivity
with the destination amateur, it may use the ampr.org form of
address. However, this is unlikely for at least two reasons.
First net 44 is disjoint, so any given gateway is unlikely to
have subnet connectivity with any given amateur net 44 station.
Second, the vast majority of amateur packet activity doesn't
use TCP/IP, so the message will have to be routed by the
heirarchical geographic naming convention used by amateur
BBS systems. This is really ugly, and there is no assurance
an accepted message will be delivered, and no warning service

message filed if it is not.

Burt,
I assume the word you mean is pompous.
What a great point you have raised! Equal opportunity CQing.
I think the FCC should have a rule making it illegal to transmit directed
CQs.
I am also worried about hams who do not spend enough time CQing, and hams
who spend more time chatting with some people than others.
There must be a long list of similar problems to discuss.
Our great minds need to focus these problems.
We need a new newsgroup. How about rec.radio.amateur.pompous?
I hope you will start and moderate it.

Paul K5ESW@nando.net

Very common, Jim....a recent death of a local longtime ham in the are
resulting in dozens of similar calls to his wife. She finally asked
someone to get on the local repeaters and advise people to hold off at
least until they got the guy in the ground.

'Course, in retrospect, her husband was just about as pushy as
well....but I guess one is not supposed to talk that way.

4247. (long) FM and June VHF Test

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-03 00:00:00 UTC
From: zlau@arrl.org
Message-ID: <1995Jun3.143440.25126@arrl.org>
Source record: 245317

Yes, this is unpopular with a number of VHF contesters. Stations near heavily populated areas tend to do better as FM activity increases. This is due to the worse weak signal performance of NBFM compared to SSB/CW, as well as the channelized nature of FM. Still, others see it as a way to get a taste of VHF contesting--and perhaps a chance for beginners to work their first DX

Working a station on a really high hilltop a couple hundred miles away. You might even get lucky and experience tropo ducting or sporadic E, which can extend the range to 1000 miles or more. Sporadic E is common on 6 meters but rare on 2 meters--I've never made the latter myself.

In New England 146.55 and 146.58 tend to get real busy so you find activity on 146.46 and other 2M simplex frequencies.

There is also activity on 223.5 MHz, 446.0, and 1296.25 MHz FM in New England. I think there is also activity on 52.525--I hope to finish a radio for that this week.

Finally, there is 10.25 to 10.28 GHz WBFM, which uses an IF of 30, 10.7, or 33 MHz. 10 GHz types are strongly urged to set up schedules before the contest to insure equipment compatibility.

The exchange is your grid square. These are explained in detail in the April 1994 QST, pages 86 to 88. The surface of the Earth is divided up into "squares" based on latitude and longitude. Once you find your lat/lon, you can use the article or a computer program to figure it out.

ARRL Phone BBS: Hiram 203-666-0578

Internet: world.std.com /pub/hamradio/ARRL/Server-files GRID.COM GRIDLOC.BAS GRIDX.BAS

(from the article, I didn't try these out ....)

Or, since the Contest is June 10th 1800Z to June 12th 0300Z, you might try asking a local amateur, perhaps one talking about the contest or about his distant DX contacts (preferably before the contest starts...)

Some of us drive hundreds of miles to a nice hilltop
and don't always know the area too well... I'll be
driving out to Mt Equinox VT, FN33, a much rarer
square than where I live. And about 3700 ft higher!

LI>Newsgroups: rec.radio.amateur.misc
LI>Organization: Emily (nee Pegasus)

In a recent anal-retentive message,
Anonymous (little@pecan.enet.dec.com) writes:

LI>> Newsgroups: rec.radio.amateur.misc,rec.radio.amateur.policy
LI>> From: brian.carling@acenet.com
LI>>
LI>> You missed the point of the discussion entirely.
LI>> The argument is by those who wish to ATTACK CW as out-dated
LI>> and knock the mode that others enjoy. The inclusion of a CW
LI>> proficiency test was not at the heart of this thread at all.

LI>No Brian, *you* missed the point. I've attached the article that started
LI>this thread. The original article makes a number of false claims. Debunkin
LI>those claims has *nothing* to do with "attacking" CW. You make it sound as
LI>though your manhood is on the line.

Huh? You sound like you don't have any manhood to put on the line when
you lie like this.

LI>What is being "attacked" are the raving
LI>of Morse is Best fanatics that refuse to accept that some other modes might
LI>be better in any number of different ways.

Baloney. In your dreams, Little Pecan. There were NO such posts.

LI>Oh, and by the way, learn to use a news reader and quote properly. Your pos
LI>are nearly impossible to follow and recently have been nothing more than
LI>one-liners that contribute nothing to the thread.

When you display this kind of ignorance and rudeness, you only
underscore the weakness of your rude, unrelated comments. Learn to use a
"news reader?" What the hell is a "news reader?" I use an off-line mail
reader here! You apparently know very little. You don't even know how to
include your name or callsign in your messages.

LI>Anyway, now the article that "started" this thread.

(In your not-so-humble opinion, anyway)

LI>In article <1995May1.135654.8139@emba.uvm.edu>
LI>gdavis@griffin.emba.uvm.edu (Gary Davis) wrote:

LI>> Hasn't the CW argument really gone a bit silly?

(Shows immediately that we are in the middle of a thread that is
already in progress, chump!)

LI>>First cw gives a better readability under weak or marginal conditions.
LI>>There is no known mode including ssb or packet that can routinely
LI>>outpace cw when the conditions are poor.
LI>>
LI>>CW is an elegantly simple mode. One can communicate with the least
LI>>expensive and unsophisticated of equipment.

You are showing your amazing ignorance here.
If you are trying to show what "started" a thread (from your limited
perspective) you are going to have to do a lot better than showing parts
of a reply quoting someone else anonymously.
Tell your quoter to at least put in some initials if you can't keep
track of who is writing, Little!

This is quite OBVIOUSLY not the start of the thread. How goofy can you
get?

LI>>Also the whole cw argument is largely a red herring foisted by those
LI>>who have entered amateur radio at a time when requirements have been
LI>>drastically lowered. Exams that have pre-published answers that smart
LI>>seven years olds can memorize. (see QST seven year old gets her extra)

And this makes perfect sense even though it was a REPLY to the original.
You also fail to point out who is speaking, since you apparently try to
keep records of petty arguments, but you are not efficient enough to
store a reference to who the writer actually is, which renders your
sleuthing rather pointless and infantile like this whole argument.

LI>>IF you want to get on HF do the time. Learn the code. Stop belly-aching.

LI>73, Member of AMSAT, ARRL, Palatine RACES, and the Arlington
LI>Todd Communications League. Weather spotter and sponsor of the Hunting
LI>N9MWB Ridge Elementary School Radio Club. See you on 160-1296 and OSCA

Wait, you said this was Gary Davis speaking. Make up your mind!
Now who doesn't know how to use the quote function?

For goshsakes "Little" anonymous person, he wrote that in defence of CW
after it was attacked as being "no good" by all the anti-code militias
on here, sheesh!

Many of us enjoy CW. We're not forcing it on you.
You don't like CW? Leave it be.... or maybe you need to
take up basket weaving?!

Oh, and PUHLEEZE, take your intestinal cramping to E-mail from now on.

END OF THREAD!

From: brian.carling@acenet.com
Message-ID: <2a6.14277.545@acenet.com>
Source record: 245322

I am building the IDIOM PRESS Super keyer II from KC0Q
It's almost finished. This kit is a really great contest keyer all on one chip. The design is almost 5 years old, and only costs $48.00 but it has all the features you need for CW. I would recommend it to anyone. There are only about 24 parts that get soldered to the board. You supply a case, battery holder, small speaker, one potentiometer control, and 4 push buttons. The soldering is tricky. You need a very small smoldering iron tip, and I don't recommend this for a beginner, especially someone who has not soldered much before.

This thing has 4 memories, incrementing serial number insertion, and all kinds of advanced features that CW ops will enjoy immensely.

Island News Bulletin No.14

Villanova d'Asti - Italy - June 3, 1995
Editors Piero Pirrone, IK1TZO, Franco Pirrone IW1DGL

Thanks to WW1V, KA1GJ and KB1BEE for their letter, VE8NC for Internet message

---------------------------<< New information >>-------------------------

NA-137 28-30 July
-----------------
WW1V Bob, KA1GJ Jeff and KB1BEE Brian write us a letter. They will activate
Cousins Island, WEST MAINE GROUP, NA-137 during 28-30 July 1995.
Setup and initial operation will commence on 28 July and continue
29-30 July during the IOTA contest.
They will operate on 80m to 10m, propagation conditions permetting. They
will have 2 stations operating, one in SSB and 1 in CW. One station will
operate with about 700 Watt, the other barefoot. Antennas will be Cushcraft
Verticals (R-5 & R-7) and a dipole for 80 meters. They will have the
assistance of the Yarmouth Maine Arc.
QSL via home calls.

C.Is.A. 17-18 June
------------------
On June 17/18 VE8NC, will be going out to Richard's Island to try,
and activate it for the C.Is.A. list of Islands. The island is in the
Mackenzie Delta North of Inuvik, and West of Tuktoyaktuk. The amateur
station will be set up at a old DEW line station (radar base), wich
has long since been removed. The name of the radar site was called BAR-C,
and that name is still used by the local people. Location is at 69 00N
and 134 43W, and operation will be in SSB and RTTY around IOTA frequencies.
(Tnx to David VE8NC/VE8SR)

>There are many people with autopatch access on repeaters that are not considered
>control opertors. Who would be held responsible for a violation of 97.113(4) in
>the case of M.O.H.? Technically the repeater control operator, not the user.
>Right?

We are really worrying about nothing. They are not going to do
anything about such things. The reason music is not allowed is that
they did not want the large bandwitdh it would take. Since all rigs
today limit the bandwitdth it would not exceed a legal bandwidth music
or not. Yes I realize it is a technical violation but I don't think
they would bother. There are many more things to worry about.

Jack WB3U writes:

>>"CQ DX" is no more pompous than "CQ QRP", "CQ Texas" or "CQ my dog".

Burt Fisher responds:

>CQDX is a lot more pompus than your examples. You may have a need to work QRP
>to test out equipment or a need to speak to someone in Texas or a need to
>work a girlfriend.

How in the world is "CQ Texas" any less pompous than "CQDX?" Perhaps
I have a need to only speak to a DX station to test out a new antenna, or
demonstrate how amateurs can talk to amateurs in other countries, or any
number of other reasons. "CQ Texas" eliminates everyone in the other 50 states
and the rest of the world. "CQDX" is far less discriminatory. I have called
directed CQ's many times, including "CQDX", however I have never failed
to answer any station that responded to my CQ, and I have never considered
myself "pompous". Sometimes the reasoning displayed here is beyond reason.

:
: That has essentially zero chance of getting through. Net 44, IE
: ampr.org, is disjoint from the internet. Your mailer will get a
: host unreachable message if you attempt this. Even if the amateur

Since when??? In Detroit and many many places all around the to world
ampr.org is fuly connected to the Internet. We've been connected for
for over 1/2 years. Now not all places are connected, but a lot more
than you realize are connected.

: host unreachable message if you attempt this. Even if the amateur
: TCP/IP subnets were interconnected with each other, and the net
: joined to the internet, this address form would only work for
: amateurs with active TCP/IP stations up and running at the time
: of the mail transmission.

Nope. Most gateways put in MX records for their users. A user does not
have to be up to receive mail. If a user is not on the air and a host
cannot reach that user their mailer will use the MX record and send the
mail to a mailhost (usually the gateway or a reliable station behind
the gateway).

: The first thing you must do is discover a gateway site on the
: internet which will forward mail to the amateur networks. You'd
: then mail the message to *that* gateway's internet address.
: The gateway will then have some mechanism for selecting
: the destination amateur's packet address out of the body or
: header of the message, *very* gateway dependent. The gateway
: will then introduce the traffic into the amateur system after
: having rewritten the address to the proper form for amateur
: delivery.

Real-time gateways dont' require this, you can send to the user directly.
It IS recommended though that you contact a gateway site and ask what

their policies are though. Many only accept mail to/from amateurs, many block connects TO the gateway from non-amateurs, while many run very open and are relaxed. It's up to the gateway sysop whether that person will allow or want you to pass mail through in real-time, held at the gateway for review, or not allow mail to pass through at all.

: Now if the gateway has direct TCP/IP net 44 subnet connectivity
: with the destination amateur, it may use the ampr.org form of
: address. However, this is unlikely for at least two reasons.
: First net 44 is disjoint, so any given gateway is unlikely to
: have subnet connectivity with any given amateur net 44 station.

Nope, the purpose of the gateways was originally to know where other amateurs are located and to use the Internet as a transport to connect each other together so amateurs can communicate around the world with each other when an RF link is not available or not-practical (HF can't pass 9600 or 19200, so that rules out HF entirely, that's a simple reason for some of the existance of them). When Internet routing came in for amateur addresses that routing is sent to the appropriate gateway. If there is no gateway in a subnet, well no routing and the hosts typically will not be reachable. But there is a gateway then the Internet routing is directed to that gateway.

: Second, the vast majority of amateur packet activity doesn't
: use TCP/IP, so the message will have to be routed by the
: heirarchical geographic naming convention used by amateur
: BBS systems. This is really ugly, and there is no assurance
: an accepted message will be delivered, and no warning service
: message filed if it is not.

Very ugly indeed. Sending to/from non-TCP/IP based BBS's (Ok, non-NOS based BBS's) is a problem. BBS's typically can't handle the long hostnames, they don't know how to send TO those names, they make *guesses* as to where a user's home BBS is (if I'm in Michigan and go to Arizona, BBS's *think* I'm in Michigan and when someone sends me mail to Arizona the BBS's send it to Michigan instead), and the hierarchical addressing format is not compatible with the Internet. Amateur TCP/IP systems typically are fully compatible though. This is part of the reason for the trend of JNOS and TNOS based BBS's over software like MSYS, FBB, and others since xNOS is Internet AND Amateur AX.25 BBS compatible. All of the gateways out there are either xNOS or Unix based.

Ne> as a mandatory entrance exam to amateur HF operation.

The point you seem to miss Bill is that CW is a common ground to
all ham operators (at least prior to no-code). This service exists
only because this group is cohesive enough to stand up for our
existence.

Code is, and always will be, a skill at which a few will excel, and many
will cuss. But it is a challenge of the mind, unsurmountable by NONE.
If a person does not have the gumption or is hard headed enough not to
challenge their own mentality, then how do you figure they will contribute
to the service?

Len

4265. Re: Logikeyer review

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-04 00:00:00 UTC
From: kr4jb@infi.net
Message-ID: <3qstjl$gjn@lucy.infi.net>
Source record: 245135

I got my Super Keyer II last year, and here's the review that I wrote
at the time, for what it is worth.

By the way, I feel obliged to tell that I originally bought the CMOS
Super Keyer II kit, and then screwed up the soldering job so bad that
I sold my parts and schematic to a friend, and then bought the Logikey
unit pre-assembled for me. :-)

Before I looked at the Idiom/Logikey unit, I bought the MFJ Econo-keyer II,
which has NO features. After getting two defective units, I asked for my
money back and I went shopping again.

The Super Keyer II has four memories. Using the keyer is a lot like
using the AT commands on a Hayes modem. There are commands to
calibrate the speed knob, reverse the paddles, turn the monitor on/off,
go into hand-key mode, turn on/off queing and several other commands.

There are two types of memories.... character and real-time. Character
mode allows you to save longer strings, because it saves the characters
an some ASCII-like representation. It asks you to enter the message
one word at a time, and allows you to back up one word at a time if you
boo-boo. Character mode also has the advantage that you can use imbedded
commands (see below). Real-time mode saves the lengths and timing of each
DIT and DAH that you send. I like the sound of real-time mode, because you
can send Farnsworth style, so I use that mode for memories with my callsign
(lots of space between the letters).

It keeps track of "serial numbers", so you can automatically log
QSOs. The serial number is played and incremented using the /N
embedded command. I bet this is great for contests!

The speed knob on the front is completely software-controlled. I can
move the knob to the "3-oclock" position and then set the speed to
13 WPM. Then the knob will go from ~6 to ~15 WPM, with 13 being right
where I set it. If that range is too slow, I can set it to something
else! The absolute limits are 6-60 WPM. That should do me fine for
the time-being :-)

The neatest part is that you can imbed commands and sub-routines in
the memories. For example, I set up my memories (on a borrowed unit)
to be like this:

1: CQ CQ CQ DE /2 /P05 /2 (C-mode - uses imbedded commands)
2: KD4DNU/AA (R-mode - sounds better to me)
3: KD4DNU/AA (C-mode)

4: QRL? (C-mode)

So memory number 1 sends CQ CQ CQ DE KD4DNU/AA KD4DNU/AA with a 1/2 second pause between my callsigns. It's a little weird, if the first letter of a word is "/" then it interprets the rest of the word as a command. Notice that I could put a / in the middle of a word as long as it is not the first letter of a word.

If I wanted to, I could set up a memory to read
1: /2 /P60 /P60 /P60 /P60 /P60 /P60 /P60 /P60 /P60 /P60 /1
This one would send my call, wait 60 seconds, and then loop back. This might be neat for a beacon, or to sontinuously send CQ and wait (like working meteor scatter). I wish I could set up a pause for about 8 minutes, to remind me to ID. That would be a lot of /P commands (they range from 0.0 to 9.9 seconds).

Here is a summary of the commands...

FUNCTION COMMANDS (press buttons 1 and 2)

A - auto-space (keeps between-character spacing to 3 units)
D - decrement serial number (used for contests)
F dd - set function speed (speed of entering commands)
H - hand-key (I can use my paddle like a straight-key)
K dd - keying compensation (makes up for delays in rig)
L - load mode (character or real-time)
M - monitor on/off (side-tone on built-in speaker)
N dddd - set serial number (for contests)
Q - queue on/off (can you stack messages up)
RV - reverse paddles (for leftys or for wrong polarity paddles)
S dd - set speed (set current knob position to mean dd WPM)
SU d - speed up
SD - slow down
W dd - weight (DIT-to-DAH ratio)
X - xmit continuous (for tuning up)
Z d - zeros and nines (for serial numbers, use leading 0's? etc)

INQUIRY FUNCTIONS (press buttons 3 and 4)

A - auto-space
F - function speed
K - keying compensation
L - load mode
N - serial number
Q - queue
S - speed
W - weight
Z - zeros and nines
1 - message 1
2 - message 2
3 - message 3
4 - message 4

EMBEDDED FUNCTIONS (in memorys)

/B - break (manually insert a word here)
/D - decrement serial number
/Gd - send a long or a short space here
/N - send serial number and increment it
/Pdd - pause for d.d seconds
/Sdd - set speed to dd WPM
/SUd - speed up d WPM
/SDd - slow down d WPM
/1 - play message 1 (if current msg is #1, then a continuous loop is made)
/2 - play message 2 (same as above)
/3 - play message 3 (same as above)
/4 - play message 4 (same as above)

THE BUTTONS
----
1 - play message 1
2 - play message 2
3 - play message 3
4 - play message 4
1 and 2 - enter a FUNCTION COMMAND
3 and 4 - enter an INQUIRY FUNCTION
2 and 3 - decrement serial number
1 and 3 - hand-key operation
2 and 4 - xmit continuous (for tuning up)
1 and 4 - reverse paddles
1,2,3,4 - reset

I hope this gives you a pretty good idea about why I was so excited
about the keyer. After all, the MFJ Econo-keyer was $50. The CMOS
Super Keyer II kit is $48. The pre-assembled Logikey K1 is $110.
For more information, or to order a kit, write to Idiom Press, Box 583,
Deerfield IL 60015.

>would if someone lied to me), they'll get 'em. It's as simple as
>flagging their calls for renewal time. One quick SQL statement.
>No field office work required.

All the questions you listed can easily be answered. The administrative
documentation can be written up easily. Sham clubs can easily meet
with these two. There are lame organizations that exist on paper with only
three members (this includes the board members) that are taking tax write-
offs from the IRS. The IRS knows about them, but they can't do anything

about them. And they don't meet some of the questions you listed either.
Why doesn't the IRS do something about them? These organizations claim to
be a church. And they don't a following & they don't have a building.

You may follow up on this if YOU were the FCC. The REAL
FCC isn't going to follow up. You may have faith in the system, but
I am MUCH more skeptical. The proof in the pudding will be what
happens in 10 years when this license is to be renewed. Even so,
I would guess that Roy will let the majority of the calls he has
received laps and only keep the interesting call signs. Judging from
that list, I think he plans to keep four to five callsigns.
>
>If the FCC no longer cares about falsified information on license
>applications, I wish they'd let us know. Lots of people could use a
>license without going through the pesky qualification process. Could
>be profitable, too. (Disclaimer for the literal-minded: this
>paragraph is merely rhetorical, and is not an offer to sell nor a
>solicitation of an offer to buy a radio license.)

Let me clue you in on a secret. There are instances of falsified information
on license applications. The FCC does care, but they don't have the resources
to track them down. I have heard that one of the operators on the 147.435
has a license under an alias/false name. So far he has not been caught.
Are you going to tell me that the FCC is going to follow and check
EVERY callsign?

Sure there is a crime commited. But THEY ARE GOING TO GET AWAY WITH IT!

Sure it stinks. But that is the way things are. That is life.

>tax -- but if the clubs are on the "up and up", there is no problem, right?)

Many clubs don't file because no money changes hands. So no taxes have to be filed.
>
>2. Check with the Secretary of State's office in CA to see if any of these
>clubs have filed articles of incorporation (or whatever legal document the
>state requires for clubs).

Not all clubs file any paper work and that doesn't make them a club either.
>
>3. Check with the ARRL to see if any of these clubs are league-affiliated.

Clubs don't have to affiliated or known by the ARRL.
>
>4. With no supporting documentation from any of these sources, the FCC can

>that a club does, in fact, exist. So, make the organizers present paperwork
>showing that these clubs do exist (minutes of meetings, bylaws, bank
>statements showing club's name, etc.) Turn the entire matter over at that
>point to the Federal Grand Jury for perjury charges.

With the exception of the bank statement all of these can be doctored up.
But if the club does not collect money does it make it less of a club?

>
>Sounds pretty simple to me. Should be able to do this in, oh, I'd say
>a week or maybe two.

This is all simple, but to act on this takes a lot of work.
When was the last time you heard the FCC fine/imprison anyone for a fictious club, anyway?

Dunno.. it would be an interesting autopatch access code. :) In that light I don't think it could be considered music - more a memory stimulant.

Hi! Thought I'd post an update to the above -- we haven't actively
maintained that ftp site for AGES (nearly two years, as far as I know,
though the above is a reminder that maybe we should). All the recent work
(and all the archives), as well as lots of pictures and other stuff, can
be found in our Web site: http://microship.ucsd.edu.

The short-form update is that BEHEMOTH (formerly the Winnebiko) is here in
my lab at UCSD (San Diego), pretty much dormant but for occasional
speaking gigs. The on-board ham shack still works and occasionally gets
plugged into our coax to the roof, but for the most part, all our efforts
here are going into the machine's successor -- the Microship. This is a
30' folding trimaran that will be both solar (1,080 watts) and
sail-propelled, with a control network of about 10 FORTH 68HC11 boards
generating interesting EMI <sigh>, a Hull remote-controlled SSB running
under a HyperTalk GUI, Qualcomm OmniTRACS for satellite email, Mac front
end in the lab and at the helm, wireless manpacks, video turret and
distribution system, hydrophones, environmental data collection,
neural-net autopilot, pressurized equipment bays, and so on. Launch is
still about 2 years away <moan>, though we FINALLY have the boat
itself... all the electronics work of the last couple of years is
starting to pay off with working systems that have an obvious context (it
just doesn't feel very nautical sitting on the bench, if ya know what I
mean).

The references to "we," by the way, include my lovely partner, Faun, KE6OQA.

Folks who don't have Web access but want an occasional update via email
(every few months, max) can get on the nomadness mailing list by sending a
standard SUBSCRIBE message to listserv@ucsd.edu:

subscribe your@email.address nomadness

(Don't forget to put in your real email address! About once every couple
of months I actually delete "your@email.address" from the list... ;-)
Alternatively, drop me a line and I'll both add you and send the
latest... but there's much more in the Web site including detailed

technical status reports so that's a better bet if you want more than general updates.

Anyway, this is a cool list -- grown a lot since the old days! I'll wander by more often...

Cheers and 73!
Steve Roberts, N4RVE
Nomadic Research Labs

Hello!
I just get my license and would like to purchase a dual
band radio:

there are quite a number of them in market:

1) Alinco DJ-580, DJ-582
2) IC-W31A
3) IC-Z1A
4) Kenwood TH-79A
5) Yaesu FT-51RH
6) Yeasu FT-530

For Yeasu FT-51RH, it's a 5W one...
is it useful to have 5W Power?

or 2W is perfectly okay in any circumstance?

IF you suggest me to go for ICOM, is it useful to have a detachable
face mic as it is in IC-Z1A???

Can anybody suggest one of them for me based on their
experience??

maybe my questions r stupid...but i'll try to learn more....
pls, any advice r welcome!

Thanks!

Simon

Hello everyone!

Another stupid question from a newbie....

My dad have a Kenwood TH-21AT that was purchased in Asia many years
ago while he was working there...

He gave it to me, however, the repeater offset in Asia is +/-500kHz*
instead of +/-600kHz american standard.

Is there anyways that i can change the offset so that i can use it
here for duplex transmittion?

Thanks for your time! any comment are welcome!

: in government: "If you don't know, how am I supposed to?". Such a

I gotta disagree with this. A volunteer shows up and says "What
do you want me to do?" That is the same as announcing that "I've
arrived and I'll go anyplace that needs help." This guy is
merely looking for direction by the folks in charge as to what
they perceive as their biggest headache of the moment.

The concept that you should study the agencies comm needs before
an emergency is a good one...but simply doesn't account for
the murphy factor that seems to accompany every major disaster.
Playing the "what if" game, which in itself, is a good
exercise. However, assuming you've thought of EVERY possible
contingency is naive in the extreme.

Walking into an EC ASSUMING you know the problems they are
having is a good way to get yourself escorted out of the EC!
The key volunteer walking in and asking his liason "what do you
want me to do?" indicates an organization which is flexible! Maybe the
answer is "The same thing you did in last months' drill" or perhaps
"We've got a technical problem with (fill in the blank), see
if you can help there."

Certainly, think about possible scenarios..practice your answer too
them, but remain flexible!!!!

4278. 900MHz Converters

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-04 00:00:00 UTC
From: Peter Holmes <plholmes@earthlink.net>
Message-ID: <3qt7a1$nkh@mars.earthlink.net>
Source record: 245148
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc,alt.radio.pirate

I read an article entitled "Listening to Your Dish" by Gary Bourgois.

He discussed FM Squared and a "FM2 converter that will work with your FM radio."

I am looking for information about converters which radio enthusiasts have successfully used to "downconvert" higher frequency transmissions to frequencies within or near 88-108 MHz for use with standard FM radios.

More specifically, can anyone out there point me toward published literature describing converters ("downconverters") which perform a fixed-frequency downconversion of 902-928 MHz signals (or other high frequency transmissions) for receipt and tuning by a standard FM radio?

Such fixed-frequency downconverters are used in some of the wireless speakers and headphones currently sold. Thanks.

John Soo-Hoo (jsoohoo@netcom.com) wrote:

: All the questions you listed can easily be answered.

Lamely. Good answers - answers that document a club and can't be
forged after the fact - are harder to come by. Remember, you need to
prove a bond fide club dedicated to amateur radio activity existed
when you applied for the license. No good answers = no proof.

: The administrative documentation can be written up easily.

Checking account statements and such are the sort of thing I'd look
for. A fresh MS-WORD constitution.dot is necessary but frankly
forgeable, so of little value. ("Can't you even produce a postmarked
QSL card to your station??? Sheesh.")

: Let me clue you in on a secret. There are instances of falsified
: information on license applications. The FCC does care, but they
: don't have the resources to track them down.

Egads!

Well, they can't track down all of them, no. Just some of them.
You're right, of course. FCC enforcement barely exists. And I'm sure
a number of cases never come to their attention. Like applying for 1
bogus club callsign rather than zillions. Easy to get away with
(though hardly honorable). But they do tend to go after flagrant
cases and multiple abuses. Just to show they do care. And to keep
people from thinking, "WX6XX is getting away with it, so it must be
OK."

I have to say that in cases like that I proudly root for the FCC.

In <3qsuqf$g34@nnrp.ucs.ubc.ca> turtle@unixg.ubc.ca (Turtle) writes:

>Hello!
>I just get my license and would like to purchase a dual
>band radio:
That's great, welcome to the fun filled hobby of Ham Radio. Now, here
comes the hard part, spending around $500 for dual band HT.

>there are quite a number of them in market:

>1) Alinco DJ-580, DJ-582
I don't know anything about Alinco, except some rumors that they make
bad manuals. Of course, the manuals don't mean that it is a bad radio.

>2) IC-W31A
>3) IC-Z1A
I have a Z1A, the W31A wasn't out when I bought my radio back in March.
The main difference between the two is that the Z1A has the detachable
panel, and the W31A is a little narrower. From my experiences with the
Z1A, I found out it to be a pretty good radio. The only problem I have is
that the audio isn't as loud as it could be (I use the radio in my car,
otherwise the audio fine). My previous radio is a Yaesu 208R which is
about 10 years old and will only do 2m. The radios certainly have come
a long way since my old radio! You should be aware that if you want
CTCSS decode (encode is included), it is optional with this radio. I just
spent about $70 on the VOX headset so I would have an easier time with
the radio in the car (I can now keep both hands on the wheel).

>4) Kenwood TH-79A
I believe the model has been upgraded to the 70AD. No major difference
though. Only thing wrong I can see with this radio (never actually used it),
is that the keyboard can not be lit. That would makes things interesting
during the dark.

>5) Yaesu FT-51RH
I don't know much about this radio. I have a feeling you will end up with
either this one or with one of the Icom models. This radio is priced close
to the Z1A, and this one does include the CTCSS decode as standard
equipment. I don't know if that is important to you though.

>6) Yeasu FT-530
This is an older model radio which might be discontinued in the near future.
It is an upgraded version of the FT-470 which I have used (I know someone
who has one). The 470 is a good radio, and the 530 improved upon it. Not
knowing the Alinco's price, this one should be the cheapest of all of them.
The 470 had a musical keypad (every key had a different tone), I don't know

if this radio has that feature.

>For Yeasu FT-51RH, it's a 5W one...
>is it useful to have 5W Power?
You can get 5w power on all of them.

>or 2W is perfectly okay in any circumstance?
It depends on what you want to use the radio for. Most of the time 2w will be just fine if you are just going to hit a repeater. You will want more power if you are going to be using it for simplex or if you are moving away from the repeater. What I have with my Z1A, is the standard battery pack that is 2w, but since I use it in my car most of the time, I have it hooked up to the car's battery which will make it 5w. You might want to consider the DC Power cable for the HT if you are going to use the radio in the car. I have mine set up in the car, but I can remove it within a minute (or less) and use it outside of the car.

>IF you suggest me to go for ICOM, is it useful to have a detachable
>face mic as it is in IC-Z1A???
It all depends on what you are going to use it for. The W31A wasn't out at the time, I didn't have a choice in the matter if I wanted to go with the Icom. I think that I probably would have gotten the Z1A even with the W31A as the detachable panel makes it easier to use in the car.

>Can anybody suggest one of them for me based on their
>experience??
I was choosing between the Z1A and the Yaesu 530. The 51R was too small for my use (I have large fingers and I didn't know how well it would be in the car). The 530 was cheaper, but when I factored in the MH29A remote speaker mic, the prices were close to each other. I basically chose the Icom because I was buying newer technology. I don't like buying things that I know will be replaced pretty soon. Now, if the 530 just came out, I would have a much tougher decision.

>maybe my questions r stupid...but i'll try to learn more....
>pls, any advice r welcome!

No, you questions aren't stupid. The purchase of a radio is expensive, and you should get all of the information you can get. You will find that everyone's opinion is subjective, and no matter how hard to try find the "right one", you never will. I know someone who hates all Icom equipment because of a bad experience he had with one 5 years ago. No matter how good a new Icom radio might be, he will never consider it. Also, no one is going to admit that they made a mistake buying their radio. All of the radios you have mentioned are good ones (these companies wouldn't be in business for as long as they have been if they have been making junk). I don't think you can go wrong with any of them. My personal choice would be the Icom (surprise, surprise). You have to decide if you need the detachable panel of the Z1A, or if you want to some some money and go with the W31A.

Good luck with your decision.

Ya know, I've heard this before, and its really hard to believe. I can
understand them refusing to sell to someone who cant produce proof of
purchase, but flat out refusing to sell the faceplate just doesn't make
sense. I own a TM 733, and that faceplate comes off the radio and out of
the truck quite often. I can imagine dropping it, or having it get otherwise
trashed.

4284. Looking for Differential GPS service

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-04 00:00:00 UTC
From: michael%vk2bea@secondsource.com
Message-ID: <1250@vk2bea.UUCP>
Source record: 245154
Cross-posted to: sci.electronics,rec.radio.amateur.misc

I am looking for a source of Differential GPS data that I can use to
correct GPS for SA and tropospheric propagation. I need to use this
at various points inland, so the Coast Guards VLF service probably won't
help. There is a company that offers a service via a C band satellite,
but it costs thousands per year.
I have heard of some companies offering DGPS over FM SCA's. Does
anyone know the specifics of these services (contacts and prices?).
Are there other alternatives?
Please e-mail any helpful suggestions to the address below.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 209 (InterNet Version)
BID: $OPDX.209
June 5, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RQX, N3AHI, KP4BJD, WA4DAN, K4CEF & Southeastern Cluster Group, KH6BZF, KF7AY, N7RK, NL7TB, WA7VNI, W9DXCC, 5H3MS, 9Q2L, DF4RD, JH12DS/1, OH2BH/VR2BH and VE8NC/VE8SR for the following DX information.

3V, TUNISIA. 3V8BB is currently active again. This time activity will be on CW, SSB, RTTY and the satellites. 3V8BB was heard on 14240 kHz SSB around 2230z, 14030 kHz CW around 2315z and operator Mike, JA2PDQ, was heard on RTTY around 14083 kHz between 0030 and 0130z. Activity is to last until the middle of June. QSL via JF2EZA.

3W, VIETNAM (UPDATE and CORRECTION to OPDX.207). Warren, KF7AY, reports that members of the Page DX Association and the Central Arizona DX Association will be traveling to Vietnam in January of 1996. Tentative dates of operation will be January 23rd through February 2nd. Plans are for an emphasis on the low bands from the coastal city Nha Trang, with concentrated top band activity during the 160 meters contest. Main mode of operation will be CW, but there will also be RTTY and SSB activity on 40-10 meters, plus the WARC bands. Permission and logistics permitting, there may be a limited first time IOTA effort from the Island of Hon Tre, which is part of the Mein Trung group in the South China Sea. No call sign has been issued as of yet. As with previous operations, the Vietnamese government will likely assign fixed frequencies and these will be published well in advance. Participants will be N7WTU, WA7MTF, K5VT, AA7WP, AA7NO, WA7LNW and KF7AY. More details in the months to come.

5H, TANZANIA-NET AND TARC. Michael, 5H3MS, informs OPDX that a new Amateur Radio Club was formed in 5H3-land and a Tanzania-Net is now on the air, active. On 6th of May 1995, The Tanzania Amateur Radio Club (TARC) had their inaugural meeting and the club decided to meet every Sunday morning at 0500z on 7080 kHz. Everyone is welcome to join in on the Tanzania-Net. The TARC is in the process of getting registered as a club in Tanzania and once this is done they will become a member of the IARU. If you need information about amateur radio in Tanzania (e.g.

getting a license), you can write to: Tanzania Amateur Radio Club, c/o Tanzania Scouts Headquarters, P.O.Box 945, Dar Es Salaam, Tanzania. You can also send a message to Michael: 5H3MS@zs5s.zaf.af or via e-mail to: mseitz@hnettan.gn.apc.org

9Q2L QSL NOTICE. Alex, 9Q2L (PA3DZN) has announced that QSLs for the 9Q2L operation goes via PA3DMH and not PA3DLM. Alex mentioned PA3DLM is the QSL Manager for his operation as 9X5EE. The operator is the same, but the managers are different.

BV9P, PRATAS ISLAND (UPDATE). Martti, OH2BH/VR2BH, has supplied the following news release as of 0000z, Sunday, June 4th, from Wayne Mills, N7NG: Poor propagation has effected the BV9P operation during the past week. A total of 21,000 QSOs have been made as of today with 3000 to the U.S. Also the island power outlet has been regularly off and is not providing enough reliable power - they often use batteries. The operation is tentatively scheduled to finish at 0400 UTC tomorrow, but the current WX report indicates a strong typhoon coming into their direction. This may caused change of schedule for C130 supply flight and departure may be delayed. Further news will be released tomorrow at 0000z. Today's schedule to U.S. is as follows: 1030-1330z 7MHz CW, 1230z onwards 10 MHz CW, 1200-1600z 14 MHz CW/SSB and 2300-0200z 14 MHz CW/SSB. All operators are in good health but looking forward on returning home after 12-days on Pratas Island.

CY9, ST. PAUL ISLAND. Last week we mentioned an operation to this island was all set to go starting July 27th through August 2nd, but OPDX accidently left out an operator in the announcement. So look for the following operators: Dan/WA4DAN, Ron/AA4VK, Bob/KW2P, Bill/K4TVE and Vance/W5IJU. Operators will sign homecall/CY9. Vance/W5IJU will attempt a trans-atlantic 144 MHz contact during this time. If anyone in Europe or Africa would like to make this attempted QSO with him, please send him a time schedule including time UTC and date. He plans to use 28870 kHz for contact frequency just prior to the scheduled time. By the way, this will be the first joint operation by the DXpedition team since their highly successful KP1 and KP5 DXpeditions. The major sponsors of this CY9 operation includes: Cushcraft Corporation, Dunestar System and The Radio Works Company. The team is still in need of donations to help offset the high cost of shipping for their DXpedition equipment. QSLs and donations for the CY9 operation should be sent via WA4DAN, Murry Adams, 403 East 14th Street, Greenville, NC 27858.

IOTA NA-065, GUEMES ISLAND, USA. The following statement is from Debby, AA7RW: "I am going on a DXpedition to Guemes Island, NA-065 for the IOTA Contest, July 29-30, 1995. I'll be on 10 thru 80 meters SSB only. I will also operate some Friday afternoon (July 28) to familiarize myself with my host's (NM7M/NM7N) station. QSL to my callbook address (94 and on) or via the bureau. Please be patient, this is my first DXpedition."

KH4, MIDWAY. Rick's, KH6JEB, short DXpedition attempt experienced multiple delays due to aircraft/transportation problems getting out of HNL to KH4. This KH4 attempt will be rescheduled at a later, appropriate date in the

future.

N6VI/KH7 NOT ON KURE ISLAND. Marty reports he was active in the the CQWW WPX CW Contest as N6VI/KH7, but was not operating from Kure Island. He was operating from his home in Hawaii and was merely using one of the new prefixes available for Hawaii amateurs in connection with the vanity callsign program. He tried to send "QTH Hawaii" regularly so as not to mislead anyone; the intent was merely to give the deserving contester another prefix multiplier they would not otherwise have.

S0, WESTERN SAHARA (Legit?). Tim, KC0PA, who was active earlier this spring as KC0PA/S0 in Western Sahara, has returned to the country for additional duty there until August of this year. He has resolved his legitimacy problems with the DXCC desk and is signing 4U/KC0PA. The DXCC Desk advised him that they would have great difficulty in approving his operation using the S0 call, but if he obtained permission from the UN commander to operate and used the 4U prefix, his operation would PROBABLY be approved. Tim has obtained the appropriate approval from the UN commander and is, therefore, hopeful that his current operation will receive the blessings of the DXCC. Tim is attached to the U.N. peacekeeping forces in that country). He has a new Yaesu FT840 transceiver with an R7 vertical for HF, and has been loaned an Icom IC551D and 3 element beam for 6 meters. He has already been spotted on some of the HF bands as well as 6 meters via the DX Clusters in Europe. Unfortunately, the contacts Tim made prior to his return to Western Sahara this past week will not count for DXCC credit. His QSL Manager is VE9RHS.

T20XC DXPEDITION CANCELLED?? Masa, JE1DXC, trip may be cancelled due to transportation problems. His flight had to make an emergency landing at Nausori Airport, Fiji, shortly after take-off due to an electrical problem in one of its engines. The HS-748 aircraft is still undergoing repairs at a Nausori hanger. Unfortunately, Air Marshall has no a back-up system and no one knows when repairs will be finished.

THE PREMIER MIDWEST DX CONVENTION by W9DXCC will be held September 8, 9 and 10th at the Holiday Inn "Holidome", 3405 Algonquin Rd, Rolling Meadows, IL 60008 (708-259-5000). W9DXCC activites will be begin on Friday evening at 8 PM with the DX Hospitality Suite hosted by the Northern Illinois DX Association. Programs will be held on Saturday from 9 AM to 5 PM and a DXer's Banquet set for 7:30 PM with this year's featured speaker Garry, NI6T, with a presentation on the Conway Reef 1995 DXpedition. Prizes will be awarded throughtout the day on Saturday. On Sunday morning, coffee and donuts will be served courtesy of W9DXCC. For more details contact: W9DXCC - Michael Zeug (K9EC), 9N317 Corron Rd., Elgin, IL 60123.

P5, NORTH KOREA DETAILS.....
(Information from Olli and Martti, provided/written by Tim Totten, KJ4VH)
Full documentation of the recent P5/OH2AM operation has been submitted to ARRL, and the addition of North Korea to the DXCC Countries List is expected accordingly. This is quite a historic occasion, as North Korea will complete the list of countries by reason of government--it is the

last of the United Nations member countries to be added.

Two members of the recent P5 activity--OH0XX and OH2BH--have now received another invitation for a full-scale amateur radio activation using the respective call signs P51XX and P51BH. This second P5 activity is scheduled to follow their trips home to Finland and the completion of data collection, QSLing, documentation and other post-operation tasks related to their recent BS7H operation from Scarborough Reef. OH0XX and OH2BH both worked closely with the Chinese Radio Sports Association to provide the logistics and transportation support necessary for the Scarborough Reef DXpedition.

Martti Laine, OH2BH/VR2BH based in Hong Kong, and Olli Rissanen, OH0XX/DX1EA based in Manila, are both executives of a leading European telecommunications company providing telecommunications infrastructure on a global basis. In the course of their business travels throughout Asia, they have established good relations with the telecommunications authorities of the region. Both are avid members of the South China Sea DX Team--an alliance of Nokia Corporation employees promoting international goodwill through DX in the South China Sea region.

VE8NC, RICHARDS'S ISLAND, CANADA. On June 17-18th, VE8NC, will try to activate this one for the CISA award. The island is in the Mackenzie Deleta North of Inuvik, and West of Tuktoyaktuk. The amateur station will be set up at a old DEW line station (radar base), which has long since been removed. The name of the radarsite was called BAR - C, and that name is still used by the local people. Location is at 69-00N and 134-43W, and the operation will be on SSB and RTTY around IOTA frequencies.

VU7, ANDAMAN ISLANDS. There has been no new info lately concerning the current sporadic activity of VU2JPS. The last we heard, several were helping him to secure a transceiver to replace his 15 watt AM/CW rig that he currently uses. There have been no reports of activity by VU2JPS since May 22nd. Meanwhile, WB2RQX reports that VU2RKC and some other VUs are in the process of planning a trip to the Andamans in October of this year and are making some progress toward securing the necessary licenses and operating permission.

VY1, BARREN ISLANDS DXPEDITION. N6IV, KF6XC and NL7TB will sign "VY1ISL" from a Yukon island June 30th. The island will be a new number for the Canadian Island Awards program (CISA). The operation will last approx. 30 hours (QSL NL7TB) then the team will leave the Barren Islands to travel to the south coast of Alaska to put on another new island, Ushagat Island. This is a new one for the United States Islands Awards program (US I) and IOTA! The AK operation will start around 0200z on July 4th and run through the 6th. NL7TB will be used to "qualify" the island. Two stations will be used concentrating on 14.250, 7.250 and 3.950 (a tribander and a vertical w/ an amp will be used). (73 de Claire, WL7MY, Secretary, US Islands ARC)

ZB2, GIBRALTAR. Dave, N7RK, will be active from ZB2 again June 23rd to June 30th. Call used will be N7RK/ZB2. Dave will be active on 80, 40, 30, 20 and 17 meters running 100 watts and wire antennas. He will operate split on the usual DX frequencies. QSL via CBA. NOTE: All QSLs from his November, 1994 N7RK/ZB2 operation have now been sent out either direct or via the bureau depending upon how received.

NEW!!!! VOICE OR FAX YOUR DX INFORMATION NOW! A FAX/ANSWERING Machine is now available 24 hours day. The number is 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

>demonstrate how amateurs can talk to amateurs in other countries, or any
>number of other reasons. "CQ Texas" eliminates everyone in the other 50 states

Antennas can only be tested by calling CQDX? Had the thought crossed your mind you could listen for a DX station INSTEAD of calling CQDX?

>and the rest of the world. "CQDX" is far less discriminatory. I have called
>directed CQ's many times, including "CQDX", however I have never failed
>to answer any station that responded to my CQ, and I have never considered
>myself "pompous". Sometimes the reasoning displayed here is beyond reason.

Most that call CQDX will NOT answer a domestic response.
So if you owned a Burger King and posted a sign in it WHITES ONLY and a black walked in you would not toss him out? Pompous, you bet.

> Say it aint so.

Actually Party 97 was ammended over the past year to allow stuff like ordering a pizza or chinest food, so long as it isn't for personal monetary gain. There's probably a copy of Pt. 97 floating around on the net so check that out.

I'll be moving to an apartment where I won't be able to use this
system. I'd like to sell it so I won't have to transport it and
then sell it.

For Sale:

Ten Tec Omni V-562

~ 1140 - Circuit breaker
~ 288 - SSB filter
~ 218 - SSB filter
~ 257 - Voice module
~ 259 - ALC
~ 256 - FM board
~ 282 - 250 Hz CW filter

I bought this rig new in 1992 for $2500 with the above accessories.
This radio has not been on the air for more than 5 hours and has
lived in a smoke free environment.
Along with the Omni V, I will include:

* 25 amp power supply
* 2 antenna systems (10 meter indoor, 10-75 meter indoor/mobile)
* Low bypass filter
* D104 microphone (non amplified)
* Ten Tec 253 Automatic antenna coupler/tuner

This is a complete station and all can be had for only $2500 (firm).
I still have this station set up, but will be torn down soon to prepare
for the move. Contact me for inspection.

Please reply direct to:

John Soo-Hoo (jsoohoo@netcom.com) wrote:

: To you and me the clubs may be just be a sham. Realistically no one
: will lose their license. The FCC can huff and puff all they want.
: They will have to prove that the clubs are fake. And just how are they
: going to do that? All the Tuckers have to say is that all those clubs
: do exist and their family members are club members of each of these
: clubs. Now how are you (or the FCC for that matter) going make a case
: against this?

That's all they have to do, eh?

Welcome to the wonderful world of administrative law. The standard of proof is preponderance of evidence and the burden's on *you*, not them. All the FCC has to do is schedule renewal applications for a hearing (surely there's enough preliminary evidence to look into it) and *you* have to prove the clubs are legitimate, and that they were legitimate *when you signed the 610-B*. Under oath. And you can bet they are going to look a little farther for evidence than the assurance of those they suspect lied on their forms. No, sir. They're going to want dated, verifiable proof that the club had, and still has, a pulse. Here are a few of the questions I'd ask at the hearing:

- When was this club started? Before or after club calls became available?
- How many other clubs did you charter at the same time?
- Can you show me the document of organization?
- Can you prove this document existed before you applied for the club license?
- Is it incorporated?
- Do you the the incorporation document?
- How many members do you have?
- Who are they? How many of these other clubs do they belong to?
- Has any member joined or left since the license was issued?
- Can I see all your completed membership applications?
- How often do you meet?
- How many people attend?
- Can I see the minutes from the last N meetings?
- Who are the officiers?
- When, how, and for how long were they elected?
- What equipment does the club have?
- Has the callsign ever been used? What for?
- Are there any logs/documentation of that use?
- Do you charge dues? How much?

- Does the club have its own checking account?
- Can I see the monthly bank statements?
- Where does your club meet? Do you pay rent?
- How did you pay for your any equipment you do have?
- Can I see the receipts? Cancelled checks?
- Can I see the treasurer's reports for the last N months?
- How many meetings of all these clubs do you attend each month?
- Which of these clubs has a repeater? (Coordinated? Frequency?)

Did anything for Field Day? Provided a public service of any sort? Held license classes? Exam sessions? Do they do anything?

and so on. All day long. Everyone involved. Separate depositions (get that story straight!). You get the idea. Real clubs have answers to these questions. No, not every club has a checking account. Not every club has a repeater. Some clubs probably do meet in people's homes. But sham clubs will have nothing but lame, unverifiable answers to give, and they'll be a distinct lack of timely documentation of activity. If the FCC cares to spend the time (and I would if someone lied to me), they'll get 'em. It's as simple as flagging their calls for renewal time. One quick SQL statement. No field office work required.

If the FCC no longer cares about falsified information on license applications, I wish they'd let us know. Lots of people could use a license without going through the pesky qualification process. Could be profitable, too. (Disclaimer for the literal-minded: this paragraph is merely rhetorical, and is not an offer to sell nor a solicitation of an offer to buy a radio license.)

>I am building the IDIOM PRESS Super keyer II from KC0Q
>It's almost finished. This kit is a really great contest keyer all on
>one chip.

My first keyer was a homebrew job using (I think) 12AU7's. Then, a few years later, I built another keyer from the Hanbook, using fairchild RTL logic chips. When used with a squeeze key, both of these keyers sent only dashes when the key was squeezed.

After more than twenty-five years of using these non-iambic keyers, it now seems impossible for me to get the hang of iambic keying. Because of this, when my RTL keyer finally bit the dust awhile back, I built yet another non-iambic job, this time using CMOS.

Despite the fact that I also use a Bug and a Heath keyboard, iambic keying continues to elude me as an attainable skill. Anyone else out there have this problem, and have you found a way to overcome it?

To: Multiple recipients of list ARCH-L <ARCH-L@TAMVM1.TAMU.EDU>
Subject: Multiple recipients of list

Hello everyone,

I'd like to get some info, preferably from desert arch types, on communication
devices. I'm currently working in Death Valley and need to acquire some efficient devices
to keep the crews in contact with one another. Citizens Band has limited range, as does
800 Mhz. What about 2 meter or pagers? What have other crews used in the field?
We just had a mildly serious situation out in the field Friday, and I don't want
to have anything worse happen.

Please E-Mail me @ gtrent@cts.com

QRZ Would like to announce a new email registry for hams around
the world. This registry will provide a common Callsign/Email
Address database for hams with access to the internet to use
from around the world.

With our new WWW page, you can input your e-mail address directly
into the QRZ Callsign Database, where it will be published on both
CDROM and on the internet. With our new e-mail database update
page, you can add your own email-address and see it immediately
update the online database!

I encourage everyone to check in and add their e-mail address
to the database. It just takes a second, and you only fill in
your callsign and e-mail address - it's that simple.

The URL is:

http://www.qrz/com/email.html

The QRZ e-mail registry will be available online via WWW 24 hours per
day and will update and maintain the database in all future versions
of the QRZ! Ham Radio CDROM.

Thanks and 73,

-fred AA7BQ

>STATEMENTS MADE ON THIS FORM ARE PUNISHABLE BY FINE AND IMPRISIONMENT.
>U.S. CODE, TITLE 18, SECTION 1001." - 610-B. Lately the FCC will
>also set your license renewal for a hearing, in order to deny it.
>Everyone involved could well lose their licenses.

To you and me the clubs may be just be a sham. Realistically no one
will lose their license. The FCC can huff and puff all they want.
They will have to prove that the clubs are fake. And just how are they
going to do that? All the Tuckers have to say is that all those clubs
do exist and their family members are club members of each of these
clubs. Now how are you (or the FCC for that matter) going make a case
against this?

Don't get me wrong, I think the whole thing is a big waste and I think
the whole matter is digusting. But what is going to happen? ABSOLUTELY
NOTHING. Here in CA, the FCC doesn't do anything for to enforce the
rules and regulations that govern amatuer radio. You may hear of a case
once a year, but the majority of violators get away with murder. One
operator here in CA must have had hundereds of complaints (KD6NBD). But
the FCC lift a finger to do anything unless there is something like
interference with commercial/government bands.

>I supported the FCC's bringing back club licenses, and it'd be a shame
>if the FCC regretted their decision because people abused the system.

I agree.

4305. Re: Ham radio & Scouts

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-04 00:00:00 UTC
From: donbonds@aol.com
Message-ID: <3qsm1q$15l@newsbf02.news.aol.com>
Source record: 245278

I am the Scoutmaster of our Troop and have had several Scouts earn their tickets. They all became interested in when they saw me using my radios, and not just a "demonstration". Those that are computer smart, I brought my portable packet gear on campouts and we used it. We sent messages back to their family and friends.

With anything in Scouts or young kids, just showing will not get them interested. They need to get a chance to do it themselvs.

That's a DARNED GOOD QUESTION seeing how the FCC has adamently denied the possibility of ANYONE getting a personalized callsign since 'way before AA6/AB6 callsigns were being assigned. (Or am I wrong?)

I'd like to see the ARRL look into this. I'll bet they'd be interested in knowing the answer. Anyone know their e-mail address? Maybe we could forward your excellent post to them to get the answer?

I don't think Roy Tucker has an e-mail address of any kind. However,
he does have his telephone number listed and often provides that number
on the air. He's listed in La Mirada at (310) 943-1150.

>clubs. Now how are you (or the FCC for that matter) going make a case
>against this?

Quite easy, actually:

1. Check with the IRS to see if any paperwork has been filed for the clubs.
(Of course, this could have the "unpleasent" side-effect of making the IRS
think that these clubs are collecting dues and not paying federal income
tax -- but if the clubs are on the "up and up", there is no problem, right?)

2. Check with the Secretary of State's office in CA to see if any of these
clubs have filed articles of incorporation (or whatever legal document the
state requires for clubs).

3. Check with the ARRL to see if any of these clubs are league-affiliated.

4. With no supporting documentation from any of these sources, the FCC can
shift the burden of proof to the parties in question to make them prove
that a club does, in fact, exist. So, make the organizers present paperwork
showing that these clubs do exist (minutes of meetings, bylaws, bank
statements showing club's name, etc.) Turn the entire matter over at that
point to the Federal Grand Jury for perjury charges.

Sounds pretty simple to me. Should be able to do this in, oh, I'd say
a week or maybe two.

>it takes time.

Moving from 25 kHz spacing to 15 seems foolish. Channels are already
being assigned on 12.5 kHz channels; it would make sense to continue
that process.

And there are quite a few of those channels available, where they're
technically able to be used. Unfortunately, most of the ham quality
radios don't work well in either 12.5 or 15 kHz spacing because of poor
selectivity, if the adjacent channels are in the same community.
But it does work well with sufficient geographical separation, and using
tone squelch helps.

Sorry, Mr. Buffington. You are simply wrong.

I have attended several open SCRRBA meetings. I am not nor have I *EVER*
been a member of SCRRBA.

ALL of the ham clubs and associations I belong to have obtained and
still hold coordinations from SCRBBA. I believe only one of these
clubs' trustee is a SCRRBA member.

I don't know what particular incident inspired your apparent dislike
of SCRRBA, but the situation as you present it does not agree with what
I see happening. I believe you are not presenting a fair view of what
is really going on here.

SCRRBA requirements for repeater (or remote base) coordination seem fair
to me. They are quite technical, it true, and they are difficult to
fulfill if you don't have a system operating on one of the test pairs,
but I think this tends to eliminate "paper" repeaters.

What with the requirement for comment by all proposed co-channel
trustees (and since there are no clear channels, all coordinations are
co-channelled), it doesn't surprise me that things take a while.

At the ARRL regional convention here in San Diego a while back, I went
to the SCRRBA meeting. Afterwards, I and several other people continued
in the OPEN suite where coordination problems were worked on, and a few
resolved, including one of mine regarding wideband packet radio.

This, to me, does not seem the actions of an "unresponsive clique".

4316. Logikey K-1 Keyer Problem

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-05 00:00:00 UTC
From: Paul Ferguson <K5ESW@nando.net>
Message-ID: <3quqgf$6eq@parsifal.nando.net>
Source record: 245164

There have been several recent posts concerning the Logikey K-1 Keyer. I have owned one for two years and like it very much, but I have one problem with it. I get contact bounce from the memory buttons. I typically use one of the top memory buttons to send my call. After about a year of use the button developed contact bounce. I switched to another button, but bounce developed again after extended usage. I took the tops of the buttons off and cleaned the small metal plate that is flexed. This fix worked for a month or so.

The contact bounce affects the operation depending on how you set the Queue function. If you have Queue = ON, the bounce is remembered and the memory function is executed once for your real button closure and again for every bounce. The result for me is to cause my call to be sent multiple times when I wanted it sent once.

If you have Queue = OFF, the bounce closure is treated as an override and interrupts the first contact closure. The result is the first letter of my call sounds like a stutter when the initial dash is interrupted and started again.

Has anyone else experienced this and come up with a fix? Are there better quality button switches that are more resistant to bounce?

I think the problem could be detected by the main keyer chip. It could ignore switch closures detected within a few milliseconds of each other, but this would require a chip change.

i can think of several clubs that have no "incorporation" paperwork or
formal structure yet provide services, hold meetings and all that. they don't
even collect dues.

>2. Check with the Secretary of State's office in CA to see if any of these

So given that incorporation is pretty onerous for small groups, it is not
unreasonable to assume there can be clubs that aren't incorporated..

>3. Check with the ARRL to see if any of these clubs are league-affiliated.

to be a league affiliated club, don't you have to have 51% league members?
that can be a tough accomplishment with league membership down around
20% or so of the total amateur service in the US.

geez, i know one club that has a club station, holds meetings, does things
yet collects no dues, has no formal structure, etc. yet has 40+ members (of
which about 10 are the movers and shakers..). it's one heckuva lot more fun to

be in a club that doesn't have to monkey around with the formality some think clubs must have -- all that causes is stagnation.

Of course, no one just goes and asks the trustees for info...

There is another concept -- that of a "on-going concern". If someone
can demonstrate that their club is an on-going concern, it shouldn't
be a problem.

At a very minimum a club should have bylaws and minutes of meetings.

>So given that incorporation is pretty onerous for small groups, it is not
>unreasonable to assume there can be clubs that aren't incorporated..

States vary. Some require incorporation, others have relaxed requirements.
For instance, here in RI you pay $10 and file a copy of your bylaws with
the SoS's office. I forget offhand what they're referred to, but its very
different from incorporation.

>to be a league affiliated club, don't you have to have 51% league members?
>that can be a tough accomplishment with league membership down around
>20% or so of the total amateur service in the US.

Naturally. But, if a club *is* recognized by the ARRL, that gives it
credence, wouldn't you agree?

>geez, i know one club that has a club station, holds meetings, does things

>to be in a club that doesn't have to monkey around with the formality some
>think clubs must have -- all that causes is stagnation.

You'd have to agree that this club can easily show its an "ongoing
concern", and simply not a paper tiger, wouldn't you?

BULLETIN
IMMEDIATE BROADCAST REQUESTED
HURRICANE ALLISON LOCAL STATEMENT
NATIONAL WEATHER SERVICE TAMPA BAY AREA RUSKIN FL
900 AM EDT MON JUN 5 1995

...ALLSION NEAR LANDFALL IN THE CENTRAL PANHANDLE...

...THIS STATEMENT IS FOR PEOPLE IN LEVY...CITRUS...HERNANDO...
AND PASCO COUNTIES...

...A HURRICANE WARNING REMAINS IN EFFECT FROM ANCLOTE KEY
NORTHWARD TO
PENSACOLA...INCLUDING THE COASTAL COUNTIES OF
LEVY...CITRUS...HERNANDO
AND PASCO COUNTIES.

AT 8 AM EDT...HURRICANE ALLISON WAS LOCATED ABOUT 25 MILES SOUTH
SOUTHEAST OF APPALACHICOLA...OR ABOUT 200 MILES NORTHWEST OF
TAMPA.
THE STORM WAS MOVING TO THE NORTHEAST NEAR 14 MPH.

SOME COASTAL FLOODING IS OCCURING THIS MORNING IN THE WARNED
AREA.
STORM TIDES ARE CURRNETLY RUNNING ABOUT 3 TO 4 FEET ABOVE NORMAL.
THERE ARE REPORTS OF SOME ROAD CLOSINGS ALONG THE SOUTHERN
HERNANDO
COUNTY COAST THIS MORNING DUE TO FLOODING AND SIMILAR MINOR
FLOODING
EVENTS ARE POSSIBLE FROM PASCO COUNTY NORTHWARD IN THE WARNED
AREA.

IN ADDITION...A TORNADO WATCH IS IN EFFECT UNTIL NOON. THIS MEANS
CONDITIONS ARE FAVORABLE FOR THE DEVELOPMENT OF TORNADOES. AT 9
AM
RADAR CONTINUED TO SHOW BANDS OF SHOWERS AND POSSIBLY

THUNDERSTORMS
SPIRALING AROUND ALLISON MOVING ONSHORE FROM THE GULF OF MEXICO.
THESE SHOWERS WILL CAUSE BRIEF HEAVY RAIN AND GUSTY WINDS AS THEY
PASS. ALTHOUGH THERE ARE SUNNY BREAKS BETWEEN THE BANDS...MORE
SHOWERS
AND THUNDERSTORMS ARE EXPECTED TO DEVELOP AND MOVE ONSHORE
THROUGHOUT
THE MORNING.

SO FAR... RADAR ESTIMATES OF RAINFALL ASSOCIATED DIRECTLY WITH
ALLISON GENERALLY RANGE FROM 1/2 TO 1 INCH IN THE WARNING
AREA...WITH
SOME HIGHER AMOUNTS IN EASTERN LEVY COUNTY. DUE TO RECENT HEAVY
RAINS
...LOCALLY HEAVY RAINFALL FROM SHOWERS AND THUNDERSTORMS THIS
MORNING
COULD RESULT IN SOME FLOODING OF POORLY DRAINED AREAS.

HAM RADIO OPERATORS ACROSS WEST CENTRAL AND SOUTHWEST FLORIDA ARE
ASKED TO RELAY ANY SEVERE WEATHER REPORTS TO THE NATIONAL WEATHER
SERVICE OFFICE IN RUSKIN.

THE NEXT HURRICANE LOCAL STATEMENT FROM NATIONAL WEATHER SERVICE
TAMPA
BAY AREA OFFICE WILL ISSUED AROUND 12 NOON OR EARLIER IF NEEDED.

ALSHEIMER

It is nice to see they are requesting the assistance of hams (second to
last paragraph).

ANARTS News Bulletin 861 4th June 1995

SEBORGA CALLSIGN ALLOCATION FALSE FROM TED HB9IAP

THE RECENT ALLEGATIONS CONCERNING THE INTERNATION CALL SIGN SERIES ALLOCATION T8A-T8Z TO THE (SO-CALLED) PRINCIPALITY OF SEBORGA ARE COMPLETELY FALSE.

AS A FORMER STAFF MEMBER OF THE I.T.U. IN GENEVA, I PHONED THE RESPONSIBLE PERSON IN CHARGE OF THE DEPARTMENT INVOLVED IN DEALING WITH THE INTERNATIONAL CALL SIGN SERIES ALLOCATIOM AND WAS TOLD THAT THE SERIES T8A-T8Z HAS NOT BEEN ALLOCATED TO ANY TELECOMMUNICATION ADMINISTRATION AND THAT NO SUCH REQUEST HAS BEEN RECEIVED FOR SUCH AN ALLOCATION BY ANY TELECOMMUNICATIONS ADMINISTRATION TO THIS DAY.

IT WOULD APPEAR THAT MR. GIAN CARLO (PAUL) BAVASSANO, I1RBJ IS ONCE MORE TRYING TO IMPOSE HIS VIEWS AND WISHFUL THINKING TO THE AMATEUR COMMUNITY DISREGARSING OFFICIAL PROCEDURES, WHTHER ON THE NATIONAL OR INTERNATIONAL SCENE.

IT IS GREAT TIME THAT THE 1.A.R.U. SHOULD FINALLY TAKE UP THIS PROBLEM, WHICH HAS BEEN SUBMITTED TO THEM SINCE MANY YEARS AND TAKE FIRM ACTION TO RID THE AMATEUR SERVICE OF SUCH PRACTICES WHICH ONLY DEGRADES THE IMAGE OF THE AMATEUR SERVICE BOTH TO ANTIONAL AND INTERNATIONAL TELECOMMUNICATIONS ORGANISATIONS.

WE ARE LUCKY TO USE A PART OF THE SPECTRUM OFFICIALLY ALLOCATED TO THE - AMATEUR SERVICE - IN THE INTERNATIONAL REGULATIONS OF THE I.T.U. LET US LIVE UP TO OUR REPUTATION OF RESPONSIBLE USERS OF THE SPECTRUM.

IPS Forum

Invitation to Amateurs for Participation in IPS Focus Group

IPS Radio and Space Services is looking to develop for Amateurs a software package that predicts HF radio propagation conditions. To ensure the software meets the needs of Amateurs, we need input from the Amateur community on what form it should take. To achieve this, we are seeking the involvement of a representative group of Amateurs in a "Focus Group", during which the participants will discuss a series of questions related to the development of the proposed software. The information gained from this will help us determine what direction to take in developing the software.

IPS Radio and Space Services has provided services to domestic and international users of HF radio communications over many years and has already developed the Advanced Stand Alone Prediction System for professional use.

The Focus group will be held in Chatswood, Sydney, at a time and date to be determined. If you would be interested in participating in this, please contact Michael Corbin, VK2YC, as soon as possible. We appreciate that many people may be unavailable during normal business hours and would be pleased to run the Focus Group on a week-night or at the weekend - if you have a preference for this, please indicate it when contacting Michael. Depending on the response to this invitation, a selection of people will be organised for involvement in the Focus Group by IPS and WIA.

Once again, if you are interested in being involved, please contact Michael Corbin, VK2YC, by:

phone on (02)-626 9288, or

fax on (02)-626 6066

Patrick Phelan
IPS Customer Focus Officer
Commonwealth Department of Administrative Services

VK2 WICEN News

VK2 WICEN News

As announced last week, work is progressing on establishing a VK2 WICEN Web page for the benefit of Internet users; an announcement will be made when it is complete.

We would like to correct an event announced on recent broadcasts; the Watagan Horse Enduro, run by Dan VK2GG, has moved to the weekend of 10-11th June; this correction would have appeared on last week's broadcast had the relevant packet radio message not been delayed in transit.

We are pleased to announce that WICEN is gaining a new country Region; Namoi, which includes the Tamworth, Narrabri, Gunnedah, Armidale, Guyra, Nundle, Walcha, and Quirindi, is now a Region in Formation. A meeting of Amateurs from the Tamworth Amateur Radio Club and other interested Amateurs met to discuss their involvement as WICEN members in the local Disaster Plan; this meeting was also attended by representatives from the SES and WICEN NSW. As a result, eight new members were signed up bringing the total in the area to twelve, and David Margery VK2ICY was appointed as Namoi Regional Organiser; we offer our congratulations to the members involved and wish them well.

This month is quite active; the Watagan Mountains Horse Enduro, conducted by Dan VK2GG, is next weekend; the Management Committee meeting is on 17th June; the Hunter meeting is on 19th June; and there are at least three events on Sunday 25th June -- the Waratah 100 Horse Enduro run by Andy VK2XRX, the Lake Macquarie Half Marathon run by Steve VK2KBL, and the Elouera Half- and Mini-Marathons.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on repeater 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

MIR and shuttle passes

MIR & SHUTTLE VISIBLE PASSES FROM SYDNEY

Courtesy of Robin Gandevia VK2VN

BASED ON KEPS DAY 144, 1995

1 June, 1995

MIR, the manned Russian Space Station, TOGETHER WITH the Space Shuttle, will both be visible over Sydney in the

next few days.

The Shuttle mission will be STS-71 (which is NOT the mission
to actually dock with MIR - that occurs later this month).

The Shuttle will be about 265 kms above earth, while MIR will
be about 400 kms high. The passes are from the south west
to the north east. The times for the Shuttle mission are
based on pre-launch Keplerian elements, so they may vary.

The two should be relatively bright, however you should
note that the last two times I have published the times for
viewing satellites, it has rained continually. Farmers may
wish to sow some more crops next week.

I shall only give the times and bearings for the Shuttle
for Saturday 10 June. Each day later the Shuttle it will
be 2 minutes EARLIER, and its path (or "arc") will move
towards the western sky. Saturday will provide the best
view, and it should be visible for three days.

All times are UTC.

Here are The SHUTTLE times for Saturday 10 June...

TIME BEARING ELEVATION
(Event) (U.T.C) (degrees) (deg above
horizon)
RISE (Horizon) 07:17 224 2
(Highest) 07:21 160 65
SET (Horizon) 07:25 050 0

The next two days the times are LESS 2 minutes, and the path
across the sky moves to the west.

Here are the MIR times. Note that on Saturday 10, you will
only have to wait 20 minutes after the Shuttle has passed.

TIME BEARING ELEVATION
(Event) (U.T.C) (degrees) (deg above
horizon)
Thursday 8 June (best visible pass)...
RISE (Horizon) 07:56 225 0
(Highest) 08:01 130 65
SET (Shadow) 08:04:30 055 14

Saturday 10 June...

RISE (Horizon) 07:43 230 0
(Highest) 07:48:30 315 45
SET (Horizon) 07:53 030 0

--Robin VK2VN @ VK2OP, author of HamLog 3.1

[Due to wood-peckers attacking the foam insulation on the Shuttle,
it will not be flying as predicted. This is not a joke. VK2KFU]

IPS Report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(26 MAY - 1 JUNE)

ISSUED ON 2 JUNE 1995

SUMMARY (26 MAY - 01 JUNE)
DATE 26 27 28 29 30 31 01
10CM 66 66 67 67 68 69 71
A 10 5 10 8 31 24 (22)
T 10 14 18 19 25 4 -6

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (W.A.) WAS QUIET TO
UNSETTLED ON 26TH MAY, WTH AN ACTIVE PERIOD 1200 TO 1500 UT, QUIET
TO UNSETTELD 27TH TO 29TH MAY, THEN ACTIVE TO MINOR STORM FOR THE
REMAINDER OF THE PERIOD.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE NEAR PREDICTED
MONTHLY VALUES 26TH TO 29TH, THEN DEPRESSED TO 15 PER CENT, WITH
SLIGHT ENHANCEMENT DURING LOCAL NIGHT ON 31ST. SPREAD F WAS
OBSERVED DURING LOCAL NIGHT ON 26TH, 27TH AND 30TH MAY.

FORECAST (02 JUNE - 08 JUNE)

SOLAR: VERY LOW

GEOMAGNETIC: 02 JUNE : ACTIVE-MINOR STORM
03-04 JUNE: UNSETTLED TO ACTIVE
05-08 JUNE: QUIET TO UNSETTLED
(ACTIVITY ASSOCIATED WITH CORONAL HOLE).

IONOSPHERIC: DEGRADED 10 TO 15% DEPRESSED 02 JUNE THEN HF
CONDITIONS IMPROVING TO NEAR NORMAL FOR REMAINDER OF
WEEK.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

News briefs

NEWS BRIEFS

Electronic espionage has been in the news recently, with claims of
various countries bugging each others' embassies. According to The
Sydney Morning Herald, the old microphone hidden in the sofa
cushion technique is rather old hat, and reveals some novel (if
somewhat apocryphal) innovations in the field of electronic sur-
veillance.

The following, taken verbatim from the newspaper report, are examples of state-of-the-art bugging technology:

- "a gas-loaded laser which can see through walls, enabling it to relay images of a building's occupants, while also picking up their conversations;

- "a radio laser the size of a pen which can listen in to conversations thousands of metres away with pin-point accuracy;

- "extremely hard-to-detect ceramic bugs made of wafer-thin gold leaf which are hidden inside a building;

- "a Russian-made sonic bug, the details of which are unknown;

- a "difficult-to-detect 'burst bug', which condenses 20 seconds of conversation before shooting the information to a receiver in one-millionth of a second." (!!!)

and finally,

- "infrared beams, which can be aimed either ... at a computer several hundred metres away" which reportedly allows a spy "to read everything the target is typing in."

Ian Fleming must be turning in his grave...

****

Many listeners would have seen news reports about the recent earthquake that struck the Russian (or Northern Japanese) island of Sakhalin. The seismic activity that caused the quake was of a kind that would occur once every several thousand years, according to a report in The Australian. The earthquake that measured 7.5 on the Richter Scale, follows the 7.2-magnitude quae that devastated the southern Japanese city of Kobe in January. Seismologists believe that more earthquakes might strike the north-western Pacific in the near future.

Before we get too comfortable down here, it's worth noting that last Monday, New South Wales experienced a minor earthquake (only a 3.7); the epicentre for the quake was about 63km north-west of Newcastle. It's worth keeping in mind that normal lines of communication can collapse during such events, (as they did in Kobe, and no doubt on Sakhalin). If an earthquake struck now, would your Amateur station remain on-air?

****

SAREX TO FLY IN JUNE

The Shuttle Amateur Radio EXperiment, or SAREX, will be carried on the 100th US human space mission when the Space Shuttle Discovery launches on June 8, 1995 at 1326 UTC. The mission is designated STS-70, and the crew includes one Amateur Radio-licensed

astronaut, Mission Specialist Donald A. Thomas, KC5FVF. The crew has scheduled voice contacts with 8 school groups in the US and one in Argentina. Landing is targeted for June 16 at 1136 UTC at the Kennedy Space Center in Florida.

On this mission, the SAREX hardware will be flown in configuration C which includes 2 meter FM voice and packet. Amateurs should use the usual frequency set to make random SAREX contacts. The astronauts will operate split, transmitting and receiving on separate frequencies. Please do not transmit on the shuttle's downlink frequency. The downlink is your receiving frequency. The uplink is your transmitting frequency. The FM voice downlink is 145.55 MHz. The FM voice uplinks are 144.91, 144.93, 144.95, 144.97 and 144.99 MHz. The crew will not favor any of the uplink frequencies, so your ability to communicate with SAREX will be the ''luck of the draw.'' To avoid causing interference to other stations, transmit only when the shuttle is within range and when the SAREX station is on the air. The crew will use KC5FVF as the primary voice call sign. On packet, use W5RRR-1 to log a contact on the SAREX ROBOT.

Send reports and QSLs to ARRL EAD, STS-70, 225 Main Street, New-ington CT 06111-1494 USA. Include the mission number, date, time in UTC, frequency and mode in your report. You must also include a self-addressed stamped business-sized envelope if you wish to receive a card. The Sterling Park Amateur Radio Club in Sterling, VA has generously volunteered to manage the cards for this mission.

The flight will highlight the deployment of a sixth Tracking and Data Relay Satellite. Once deployed, an engine on the satellite will boost it into a geostationary orbit. The TDRS System provides NASA with communication and tracking capability to meet its mission support requirements.

SAREX will also be carried on mission STS-71, which is scheduled for no earlier than June 23. During that mission, the Shuttle Atlantis will rendezvous and, for the first time, dock with the Russian Space Station Mir. The shuttle will carry two new Mir crew members (Mir 19) to the station, and return to Earth with the three Mir 18 crew members, including US astronaut Norm Thagard.

For more information on SAREX, contact the ARRL Educational Activities Department.

U.S. Court case

US court clears way for Prodigy suit

In a ruling that could change the nature of online information services, a New York judge cleared the way last week for a $US200

million ($278 million) libel lawsuit against Prodigy Services when he ruled that the popular online network was a publisher of information. not just a distributor.

Thus, ruled Justice Stuart L. Ain of the State Supreme Court in Mineola, New York, Prodigy - a joint venture of IBM and Sears, Roebuck & Co - might be held legally liable for the comments posted electronically by its users.

The decision by Justice Ain came in response to a motion filed by Stratton Oakmont Inc, a Long Island securities investment firm that sued Prodigy in January for libel and defamation.

Professor A. Michael Froomkin, assistant professor of law at the University of Miami, said it appeared that Justice Ain's ruling was compatible with libel law as it pertains to traditional print media, because the question was whether Prodigy had knowledge of the information it presented to its subscribers.

"If this decision is upheld, and if the Exon amendment is held to be constitutional, then it would put online services in a terrible position," Professor Froomkin said. "They would have to monitor to satisfy the Exon censorship requirements, and by doing so they would incur tremendous potential liability."

Should the ruling be upheld and the Exon amendment passed, he suggested, online services might choose to halt all monitoring of bulletin boards rather than assume liability for their contents.

The suit arose from a series of messages posted on Prodigy's "Money Talk" electronic bulletin board in October by an unknown Prodigy user. The messages portrayed Stratton Oakmont, which specialised in penny-stock issues, and its president, Mr. Daniel Porush, as criminals and characterised the firm's dealings as fraudulent.

Stratton Oakmont has been investigated by the Securities and Exchange Commission for reported irregularities and securities violations.

In his decision, Justice Ain drewa distinction between Prodigy - which uses human monitors and automatic systems to remove objectionable material posted to its network - and other information services that merely act as conduits for unfiltered information, much as a bookstore or library distributes information but does not publish it.

"We disagree with the findings and we are currently looking at options," Mr. Brian R. Ek, a spokesman for Prodigy, said from its headquarters in White Plains, New York.

Prodigy has contended that though it had once advertised itself as a "fanily-oriented" service and screened all new messages posted

to its bulletin boards, it stopped pre-screening messages more than a year before the "Money Talk" messages were posted in October.

The judge also held that Mr Charles Epstein of Chicago, which managed the "Money Talk" forum as a subcontractor to Prodigy, was acting as an agent of Prodigy. Stratton Oakmont contends that Prodigy is responsible for Mr. Epstein's failure to remove the postings.

The decision, if upheld, has the potential to put the commercial online services in conflict with proposed "decency in communications" legislation now pending in Congress and several State legislatures.

Club news: Kempsey

The Kempsey and District Amateur Radio Club will be holding a Trash and Treasure Day and Sausage Sizzle on Saturday 10th June 1995. The event is being held to mark the first anniversary of the formation of the club and is being promoted as a family day so bring your spouse and family along and join in the celebration. Admission will be free for those not selling equipment. Vendors may sell from trailer or car boot and sites will cost $5.00. A limited number of trestles will be available for an additiona fee of $5.00.

Atractions will include a demonstration of weather satellite receiving gear, solar power display and various demonstrations of amateur radio equipment. There will also be some foxhunts so bring your sniffer along. Tea, coffee and soft drinks as well as sausage sandwiches will be available for purchase and there will be on-going raffle draws throughout the day with a very extensive list of prizes.

The day will start at 9.00 am and the venue is the Girl Guides Hall, Verge Street, Kempsey. Talk-in directions will be available on the Kempsey 2 meter repeater VK2RMC on 146.875 MHz. Further information may be obtained by telephoning Andy VK2AAK on (065)699441 or (015)204282 between 9.00 am and 5 pm Monday to Thursday.

Many thanks and best 73's

Andy Keir VK2AAK
President, Kempsey & District Amateur Radio Club

Club news: Illawarra

The Illawarra Amateur Radio Society advises all listeners their next meeting on the 13th June will be a mini auction of shop-soiled stock. There will be radio controlled cars, walkmans, power boards, etc. All stock will have low reserver.

The auction will start at around 2000 so bring your money
with you. See you there!

--Brian VK2UBF for Illawarra Amateur Radio Society

Club news: Castle Hill

NEWS NEWS NEWS NEWS NEWS NEWS NEWS NEWS
from
CASTLE HILL AMATEUR RADIO CLUB

The next meeting of the Castle Hill Amateur Radio Club will be
held on this coming Wednesday, the 7th of June.

This will be our A.G.M. and all members are requested to attend.
We will be discussing forthcoming club events over refreshments at
the completion of official business.

The meeting commences at 8pm and will be held at Castle Hill
Military Radio Collection.

Visitors are most welcome to attend.

For further details, contact Ian O'Toole, VK2ZIO on (02) 680 2112.

from Ian O'Toole, Publicity Officer

Club news: St George

From the St George Amateur Radio Society

The next meeting of the Society will be held at the usual venue,
that is in the 1st Allawah Scout Hall, corner of Bellevue Pde. and
Blakesley Rd., South Hurstville at 7.30 pm next Wednesday evening
the 7th of June 1995.

The Society's guest speaker for this evening will be Ean Young
VK2FSO. Ean will be giving an interesting talk on the procedure
and instruments used for measuring noise levels in the building
industry.

Visitors are always welcome to club meetings, coffee, tea and
biscuits are provided and the members look forward to meeting
those interested in attending.

from - Allan VK2XF Publicity Officer

Club news: Parramatta

Parramatta Amateur Radio Club

For the July 6th club meeting, members will hear a lecture from
Roger Harrison VK2ZRH.

His talk will be on "Amateur Radio - where it's at and what the
future holds".

He has been involved in instituting developments in the hobby for twenty five years, both technically and in its administration.

Amateur radio has been undergoing rapid change and been under tremendous pressures in recent years.

Roger promises to outline the stage amateur radio has arrived at, what the future might hold, the threats and opportunities - and what might be in it for you.

Don't miss this one. Thursday, July 6th, at Amateur Radio House, 109 Wigram Street, Parramatta.

Club news: Summerland

Information from the Summerland Amateur Radio Club

The Lismore Disaster Welfare Committee conducted an Evacuation and Registration exercise on Saturday 3rd June using the evacuation centre in the Union building at the Southern Cross University.

The Summerland Amateur Radio Club provided communications assistance for the assistance of the Australian Red Cross who took place in the exercise.

The situation was that: extensive fires in South Lismore had caused the evacuation of 250 persons. These were to be registered and cared for. The task was to set up a communications centre in the evacuation centre and have a mobile with a Red Cross person in the evacuation area.

Although we would have very little exercise traffic, as this was the first exercise using this building, we used the chance to test our callout. A comm centre was set up, equipment and propagation from the site to difficult points around Lismore was established.

Six club members - VK2s EA, DIL, DLR, XVR, XKX AND JWA - took part. Five of these are also WICEN members. As a test we also set up a cross band repeater at VK2EA's QTH, as a backup to check its performance and propagation.

The activation call was received at 0830 and we were onsite before 0900. Despite a delay getting into the building because the correct key holder was hard to find, we were operational by 0925. Duncan, VK2DLR, went mobile to the evacuation area, and Greg, VK2DIL, went mobile to various sites to check propagation on 2 metres and 70 centimetres. The exercise ended at 1100. It was followed by a debrief.

From our point of view everything worked well but our location could become noisy for others than us. Our site problem was that in an airconditioned building most windows etc. do not open, thus restricting places where cables might be run. We found an office we could occupy and pass cables through a sliding door to antennas etc.. We had enough operators to do the job and our phone-around

organised enough organised rosters had it been a prolonged operation.

Propagation was satisfactory to all points tried and the backup crossband rig worked OK. Thanks to those who assisted. We look forward to participating in further exercises of this type.

from J.W. Alcorn VKJWA

: volunteer.

: --
: Cliff Sharp Never get into fights with ugly people.

No Cliff, I didn't miss a word...the opinion still stands. I've got direct experience on this with 89 quake where I was the "KEY" volunteer...I was the EC for my city and I walked up to our liason officer and asked that very same question. Yep, me, the EC. And the liason officer's response was "Great, your here..this is what I need done.." We wound up setting up a radio link to the corporation yard cuz police/fire dispatch couldn't talk on those frequencies...noone had ever thought of that. We spent most of our time in drills thinking about our main charter..and we were more than ready to do that(shelter comm) but being flexible, setting up a link to the corp yard was no big deal.

Another duty we preformed was to assign someone to watch the TV and inform us about major events being reported via the mass media. The emergency folks were too busy dealing with our town to directly stay in touch with the surrounding area. We provided a mechanism for feeding outside intel into the EOC. Not exactly a big chore, but an important role. I'd never bothered to have my "Key" people watch TV either!

Simply put, assuming what your customer sees as his needs is stupid either in business or in the emergency response game. ASKING what they know they need is a first important step to solving their problem. Spending time playing what-if beyond those needs identified before an emergency strikes isn't wasted effort, but assuming that is the ONLY needs that will arrise is also naive!

That's correct. If you are a non-profit *that handles money*, then
you have to file for non-profit status with the IRS. But if no money
is exchanged, the IRS doesn't care about you.

Nor do you need to be incorporated under State law unless you intend
to make use of your corporate status to limit liability of the members
for actions taken in the club name.

If you want a bank account under a club name, you have to file a
record of fictitious name with your State Secretary of State's
office. But if you keep the money in a shoebox, or don't handle
money, you don't need to do that either.

Surely someone licensed since '67 would remember the couple of years in the
late '70s when Extras could request any 1x2 callsign...and, when all the
1x2s were gone in the fourth and sixth call areas, they went to AA-prefixed
2x2s...

In short: you're mistaken.

Master horseback riding a hundred years ago was useful too. Good thing the
DMV doesn't require horseback riding skills to get a drivers license! Now if
only the FCC would follow the lead of the DMV.

If more of the old die-hards had an attitude like "it has proven effective for
eighty-plus years", we might all still be getting around on horseback!

Not for me, thanks. I just don't see the point in wasting a bunch of time
mastering something as obsolete as Morse Code. I'd rather spend my time
learning something new.

: The FCC doesn't care if they collect dues, have a repeater, hold
: meetings, or anything else. Declaration that your group is a club
: *makes* it a club under their definition. End of story.

Not quite. That's how *you* define a club. FCC rules require a
document of organization and a primary purpose devoted to amateur
activity. Dues, repeaters, meetings, and public service are just
various ways of proving that you have any activity at all; if you
don't do anything, you don't qualify as a bona fide club and you don't
need a "corporate" callsign. The primary license will do.

A sham club's primary purpose - its only purpose - is to obtain a
pseudosecondary callsign for the trustee. The FCC's concern about
sham clubs is demonstrated by the NPRM proposing to up the minimum
membership count to four. They believe it will help guarantee that
clubs applying for licenses are bona fide clubs, and said so publicly.
If all that were needed to be a bona fide club were a "declaration,"
they wouldn't be bothering.

OK, I admit I do software instead of electronics, but I started out with only a math degree. There *are* folks around here that never got a BS, and it's the thought of their *leaving* that makes me shudder -- I couldn't get products out without them. It's true, it's tough to get hired these days without a "relevant" degree; this is mainly laziness on the part of hiring companies -- they're missing a lot of good talent.

The main difference between a "professional" and an "amateur" that I see is that the "professional" may have more time to keep up with things. An amateur, with less time to spend, has to concentrate on a few topics of interest. That's one of my objections to the code requirement -- it forces amateurs, already short of time, to spend a large chunk of that time up front on a topic that may interest them not at all. It's also why I object to your sneering at homebrewing using ICs -- an amateur who wants to get something done should be looking for the quick way to do it (not that professionals shouldn't be doing the same!) and in today's world the quick way to do it is to learn what's available and how to apply it.

That may *appear* to be the case from your distorted viewpoint in
the academic ivory tower, but the fact is that large numbers of
workers in professional electronics don't have EE degrees. This
seems to be particularly prevalent in the RF communications end of
the electronics industry, but its still common in the computer
field as well. The fact is that few schools do a good job of
teaching RF electronics, and many companies find that the training
graduates have received has to be tediously erased and replaced
with current industry practices. (It often takes six months to
a year to get a new graduate straightened out and up to speed
in industry.)

That's not to say that some sort of formal background won't be
helpful. Typically, a physics or math background is looked upon
with favor in the electronics industry. The assumption is that
such training may have assisted the individual in developing a
clear logical approach to problem solving. It's obviously not
a guarantee in all cases...

>Now take the lowly mathematician or baker or plumber with only a self-

>just a matter of one of them receiving a salary, then we wouldn't see
>corporations requiring the BS or MS - they'd be hiring the amateur
>who has demonstrated only a love of the work.

In fact, that is exactly what happens in better run companies.
With technology advancing so rapidly, anything you learned at
university specific to your specialty will be obsolete in two
years. Better run companies look for people with a passion for
the work because they know they can count on those people to
put in the extra effort required to remain current with technology.
Someone resting on his academic laurels quickly becomes obsolete
and of no further value to the company.

>Those of you whose daily duties place you on the `cutting edge' of
>electronics would shutter at the thought of working with a colleague
>whose only training was self-taught. Look around at your fellow

>workers - dare I say they've all earned at least a BS? (An EE BS from
>this university now requires a 5-year stay.)

Hmmm. Again I think you'd be surprised. As I think about my colleagues in the business, especially the more successful and long lived of them, I'll bet fewer than 10% have degrees in their current specialty (in part because their current specialty didn't even exist when they were in school), and probably less than half have degrees in electronics at all. My own formal training is in physics.

Many of us gravitated to our current positions because of a passion for the work rather than because of our formal backgrounds. What knowledge we have of our specialties is often almost completely self-taught, often because we *are* on the cutting edge while academe trails at the blunt edge of the blade. (Remember you're dealing with a two year cycle time in this business. The technology you learned in school is already obsolete before the ink is dry on your sheepskin.) If you don't continously self-study, you'll rapidly be as relevant as hand sent Morse Code in the computer age.

You don't have to be an EE to do cutting edge work. In fact I rather think that the EE degree is often a hinderance rather than a help since it tends to fossilize your thinking into one paradigm that may no longer be suitable at the cutting edge. The cutting edge is about paradigm breaking, and an open analytical mind is often one of your sharpest tools.

Amateurs often provide breakthroughs simply because they *are* amateurs. They haven't had the years of formal training pounded into them that tells them what they are attempting is impossible, or too hard, or too complex. Thus they can take a fresh approach, with a fresh and open viewpoint. Of course they often fall on their faces too, some of the things they'll try really are impossible, or too hard, or too complex, or just stupid. But that's not important. They aren't trying to feed a family off of their amateur activities and can afford to fail many times in trade for that one success that makes it all worth while. That "ah ha" moment is all the pay they need.

Now a good engineer doesn't have to make breakthroughs, of course. Some of the best engineers are incredibly conservative. That's good, you can almost always count on their designs working first time. But if you want to be a market leader, you'd better have some people with a flair for breaking out of the mold, for synthesizing the fruits of many disciplines rather than being strait jacketed into only one, in order to create new ideas and new products. And you'd better plan to give them the freedom to fail from time to time.

When something new is first tried, we're *all* amateurs.
I've had that "ah ha" moment a few times in my career,
and boy is it sweet, worth every minute spent reading
journals and books to learn all I can about my chosen
interests, and worth every disappointment of failed
experiments. That can't be taught, it has to be
experienced directly, and amateurs probably experience
it more frequently than professionals.

I can be the stodgy conservative engineer when I have
to be, but God is it *boring* compared to those moments
when I am a true amateur working out there on the edge
with no net.

Copy the average age too. A stagnant *aging* population *is* a
dying population. The only way a static population can be healthy
is if the average age is remaining stable or declining. Amateur
radio was greying faster than the general population. That's not
a healthy state. That trend has now reversed, and that's good.
The average amateur age is still higher than the average age
of the general population, but at least it's stopped gaining
on the general population at a rate of almost one year per year.

: Jim Devenport WB5AOX

I would not recommend using amateur radio at all for Internet access,
particularly since it would not be legal.

Although I have no idea on how it may be used or if indeed you can get
access, but I would get an INMARSAT C terminal, which is a data protocal
device. The big problem is that it is likely to be rather slow (1200
baud) but they may have higher data raters now. In addition, you would
only need a Restricted Operator's Certificate to operate the terminal -
amateur radio is not applicable. I would suggest that you contact your
nearest marine radio supplier (in Vancouver?) and he should be able to
help you out.

Uh, Steve, you missed a word.

If a volunteer shows up out of the blue and says, "What do you want me to do?", that's great, he wants to help. If a KEY volunteer (one already part of the organization who's supposed to know what's going on) shows up and says the same thing, one wonders why he's a KEY volunteer.

I can't speak for EE's, but in CS, those that I respect the most
don't have degrees in CS.

> Now take the lowly mathematician or baker or plumber with only a self-
> taught electronics backround. You're fooling yourself if you think

> who has demonstrated only a love of the work.

When I graduated, I made a promise to myself to not work for a company
that valued someone's degree more than someone's capabilities. I turned
down several job offers from companies because they were more interested
in what I had done as a student then what I had done as an engineer
to put myself through school.

That may be the case with EE's, but not folks I respect for CS. A degree
only means that someone had the stamina to put up with what someone else
felt was valuable. Sounds a bit like Morse Code for HF access.

I'm thinking about buying one of the 80-10 MFJ verticals. Can anyone discuss its merits and deficits? How does it work on 80?... Can it be heard at all on 80? Any information would be appreciated.

(((Please, no messages about the Cushcraft or GAP offerings. I'm already familiar with those.)))

>be filed.

Well, not exactly. Even if you're non-profit you still file paperwork.

>Not all clubs file any paper work and that doesn't make them a club either.

Depends on your state. A club can't be recognized as a legal entity
unless appropriate paperwork is filed.

>Clubs don't have to affiliated or known by the ARRL.

Of course not.

>With the exception of the bank statement all of these can be doctored up.
>But if the club does not collect money does it make it less of a club?

Its not the absense of one, its the absense of many that makes the
situation questionable. Sure, you can doctor most of the paperwork,
but you're going to have a tough time convincing anyone that in
fact you do have a "club" when the state you claim to have a club
in has never heard of your organization, the IRS doesn't know
you exist, and you don't have any bank records supporting your
claim (not even a savings account? Gee, how strange.)

>When was the last time you heard the FCC fine/imprison anyone for a
>fictious club, anyway?

Has the issue of a fictious club ever been an issue before to start
with? Probably not. But, clearly it is now.

That's right!

June 17, 1995 (Saturday) starting around dawn at the University of Central Florida in Orlando, Florida will be the next UCF Tailgate party. This is a semi-annual event that is free of charge (donations welcome) sponsered by the University of Central Florida Amateur Radio Club and the Central Florida Repeater Association.

Just the right time to clear out that shack of stuff before Field Day! Besides, who can beat the admission charge?

For more information, or directions to the campus, e-mail me at kd4wpa@magicnet.net

Talk in will be on 146.64 (-) with secondary talk in on 147.060(+)

I monitor 442.250 if you prefer UHF....

I thought if no money changes hands paperwork doesn't have to be filed.
Non-profit organizations do handle the transfer of funds, but if you
collect no monies, nothing is required to be filed with the IRS.

G'day,
I'm looking for the pinout of a parallel laplink cable that will
operate over the standard old parallel printer port (ppp), not the new
enhanced ppp. Therefor it operates a nibble at a time using the 4 status
lines for input.
I've posted to a few newsgroups, but i figured that it would be commonly
kknown to some amateurs.

Thanks in advance

Message-ID: <3quam6$h9i@nic-nac.CSU.net>
Source record: 245198

Hi everyone! I just took my tech no code exams yesterday, and passed. I
should be getting my call sign in a few days. While I'm waiting for it, I
thought I'd ask about what type of radio I should get and also what band
should I start out with? One person recommended I start out on 2m.
A 2m radio seems to run around $200-$300 dollars. Is that reasonable?
I also want to use autopatch, so is 2m a good choice? I've heard
conflicting stories about autopatch. One person said it can cost as little
as $10 a year, another said $50-$100 a year, yet another said $50 a MONTH!!!!
If there is someone in my area (San Fernando Valley, California) that can
show me the ropes, that would be great!

Hmmm. So what you are saying is that requiring Morse is as important
as requiring formal education in CS? Although you don't seem to place
much value on formal education...it's fair to say that most folk do.
Thanks for affirming the value of Morse!

By the way, I assume that by "CS" you mean "Construction Science" or
something like that? Or is that nerve gas? Oh, that explains it...

All in good fun. This is getting way beyond serious. :-)

>continued CW requuirement of amateurs access to HF?

That we are required to know code to fulfill the `trained pool'
requirement is a false notion created by the anti-code folks. You
will recall that the military hams I met while working in the Coast
Guard had received their license *after* they had completed their radio
training. That training with the associated 22wpm graduation requirement
made the exams quite easy to pass.

Gary,

Clubs, at least in Ohio, do not have to file all this paperwork as has been indicated. The IRS does not care about clubs or organizations unless they carry certain monetary balances.

For example, our neighborhood association (really just a club) has not filed any paperwork with any government body. Yet it has a bank account. Our local youth sports organizations have bank accounts yet they have never filed with any government organization.

The balances of the neighborhood association start at around $4,000 each year and dwindle down from their. The sports groups start at

around $25,000 and dwindle down from there.

All a club or organization needs is a constitution and by-laws. They do not have to file them with anyone to be recognized as a club.

Regards,

Duffy - WB8NUT

Interesting, because the banks require a taxpayer ID number, so someone besides the club is having any interest earned reported to the IRS as income rather than having a tax number for a non profit corporation.

"CQ DX CQ DX CQ DX CQ DX this is DV1JEC DV1JEC DV1JEC calling CQ DX and
listening"

For twenty two years I have been calling this CQ whenever I operate from
my parents QTH in Makati, Metro Manila, Republic of the Philippines.
I also call plain CQ's when I want to work any station who happens to be closest
or strongest. (Mostly JA's. If I wanted to work other Philippine stations I would
get on 40 meters and call CQ there.)

I HAVE to call a directed CQ if I wish to work stations other than JA's.
I do not mean to say that I never want to talk to JA's sometimes I do and
I call a plain old CQ and I will have my pick of over a hundred replying
to a CQ (If I weighed all the JA QSL cards I must have over 10 lbs worth
of them and I am one of the few who QSL back 100% even JA's). This is
true on all HF bands and more so on 15 meters. If you just call CQ then
you would hear nothing but a cacophony of a JA pileup (ham radio over
there is a growing and thriving hobby) which will cover up any DX signal
out there. The JA hams respect the fact that you do not wish to work that
their country at that time. Diversity is a part of ham radio and if all
you get to talk to are the adjacent stations which respond to your CQ
then it is no fun.

I sometimes called CQ North America when I am trying to possibly get into
the US to relay traffic for me into San Diego.

All I can say is that you must not have been on the receiving end of an HF
pile-up to make that kind of remark about pompousness in CQ calls. One cannot
judge pompousness from a CQDX, a lot more information is needed. To judge an om
as pompous based on his CQ can possibly make one seem as hasty and judgemental of
other hams. In absence of other factors. I believe that this kind of judgemental
attitude to be against the very grain of amateurism, more so than pompousness.
Maybe time will change your views.

I gather that the issue isn't whether the clubs are legitimate or not. It's that call signs are being collected by Tucker under an unlikly high number of club names for clubs which may or may not exist.

If the clubs do not exist, then Tucker is guilty of providing false or misleading information to the FCC. That is a finable offense.

1995 14* 23* 24* 18* 14* 14* 13* 12* 11* 10* 8* 8*
1996 8* 8* 7* 7* 7* 8* 8* 9* 10* 11* 13* 14*
1997 16* 18* 20* 23* 25* 29* 32* 37* 42* 48* 53* 59*

Asterisk indicates predicted value. No predicted values have changed
relative to the set of T-indices contained in last month's Summary.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.
==========
2. FLARES AND SHORT-WAVE FADEOUTS - NONE

2.1 Comments on Solar Activity.
Solar activity was at very low to low levels during May.

The monthly-averaged sunspot number for May was very low, being only
marginally larger than last month's value which was the lowest in the

decline of this cycle. The low level over the last two months is similar
to that expected near solar minimum which is the time at which the sunspot
number begins to rise at the start of the new cycle. Unfortunately, (at
least for those who like an "active sun") other indicators suggest that
we still have some way to go before solar minimum and the onset of the
new cycle.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)
DATE COMMENTS
2 May 95 29 active to minor storm
3 May 95 30 minor storm
4 May 95 22 active
5 May 95 25 active to minor storm
6 May 95 22 active to minor storm
7 May 95 17 unsettled to active
8 May 95 18 unsettled to active
16 May 95 23 unsettled until 09UT, minor storm levels 09-12UT,
active 12-21UT then unsettled.
17 May 95 17 unsettled to active
24 May 95 21 unsettled to active, with brief minor storm
period 03-06UT
25 May 95 16 unsettled to active
30 May 95 24 active to minor storm

The three most disturbed intervals this month were 2-6 May, 16-17 May,
and 30 May. All geomagnetic disturbances observed this month are
believed to be coronal hole associated.

==========

IONOSPHERIC DISTURBANCES (for Sydney)
DATE T MUFs
3 May 9 -7 depressed 25% 00-07UT, then near predicted monthly values.
6 May 95 -6 about 15% below predicted monthly values

Fewer ionospheric depressions were observed this month is the
Australian region due to seasonal effects (winter). However, the
quality of HF propagation conditions may have been degraded during
the geomagnetic disturbed intervals listed in the geomagnetic section,
even though depressions did not occur.

SB QST @ ARL $ARLB056
ARLB056 ARRL Director resigns

ZCZC AG23
QST de W1AW
ARRL Bulletin 56 ARLB056
From ARRL Headquarters
Newington CT June 5, 1995
To all radio amateurs

SB QST ARL ARLB056
ARLB056 ARRL Director resigns

ARRL Great Lakes Division Director Al Severson, AB8P, has resigned for health reasons. Effective June 5, Vice Director George Race, WB8BGY, becomes Great Lakes Division Director.

Severson, who is still recuperating from a prolonged illness, said ''The only reason for my resignation is ... my feeling that we need a vital and active member running this division.''

''I am certain you realize how sad I am taking this action. However, I am extremely heartened to have my friends in the League family, and my good friend George Race to take my place,'' Severson said.

Severson had served as director since January 1, 1990, and, before that, as vice director.

: The point you seem to miss Bill is that CW is a common ground to
: all ham operators (at least prior to no-code). This service exists
: only because this group is cohesive enough to stand up for our
: existence.

: Code is, and always will be, a skill at which a few will excel, and many
: will cuss. But it is a challenge of the mind, unsurmountable by NONE.
: If a person does not have the gumption or is hard headed enough not to
: challenge their own mentality, then how do you figure they will contribute
: to the service?
: Buddy Sohl KC4WQ
: buddy.sohl@shivasys.com
: no relation known

Small world though given the somewhat rare nature of our last names:-)

Anyway, your comment doesn't justify the continued testing of CW at all.
It simply raises the testing to that of a roadblock on the presumption
that the test is a pain and, therefore, eliminates access to the
ham ranks (HF anyway) by those unwilling to take on the CW challenge.

That isn't at all why testing should exist at all.

I am trying to locate the repeater coordination organization for Northern New Hampshire, around the Littleton, Berlin, Mnt. Washington area's. If anyone knows of someone that has an Email address associated with such an organization, please forward your info to: thavens@nfevine.uscc.com or call me at: 609-247-0005 and leave a message.

I am going to be moving into that area soon, and I am interested in setting up a repeater in the area's mentioned above.

Tune in on 14.336 MHz any day of the week. This is the county hunters net
and many people there will be happy to give you the address for MARAC and
other CHA associated organizations.

>or may not exist.

Yes.
>If the clubs do not exist, then Tucker is guilty of providing
>false or misleading information to the FCC. That is a finable
>offense.

Yes, if false was provided to the FCC then Mr. Roy Tucker is in the wrong.
I think there is not question about this matter. But whether or not the FCC
will act on this remains to be seen as well as the definition of what
constitutes a "club" is another issue that has arisen.

To set the record straight, SOME of those club names are actually clubs
that Mr. Tucker is involved in. I have it on good authority (someone told me)
that two or three of the clubs listed are for real. As to the other 22 to 23
other "clubs" I'm skeptical.

4371. HABET-6 to fly during ARRL Field Day '95

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-05 00:00:00 UTC
From: wallio@dsm1.dsmnet.com
Message-ID: <3qvgun$89a@dsm6.dsmnet.com>
Source record: 245219

Iowa State University (ISU)
Spacecraft Systems and Operations Laboratory (SSOL)
High Altitude Balloon Experiments in Technology (HABET)

HABET-6 Mission Announcement

HABET-6 : ARRL Field Day 1995
DATE/TIME : Saturday June 24th or Sunday June 25th
: Release 1300CDT (1800Z) 0800CDT (1300Z)
: Weather conditions will control time of release

HABET-6 : W0RPK QTH south of Des Moines, Iowa
RELEASE SITE: Coordinates 41d26.280mN 093d34.099mW

HABET-6 : Payload weight : 2.7kg (6-pounds)
LIFT INFO : Balloon : TOTEX TA-1200
: Helium : 5.1m^3 (180ft^3)
: Ascent rate : 213m/min (700ft/min)
: Max altitude : 32,300m (106,000ft)
: Max radio range: 640km (400sm)

HABET-6 : Packet Radio Downlink 446.375MHz 900mW
FREQUENCIES : Packet Radio Uplink 144.300MHz
AND MODES : Standard AX.25 1200BPS AFSK FM
: APRS-compatible NMEA-183 GPS navigation data
: Information beacons
: Open digipeating
: Voice Repeater Downlink 446.350MHz 900mW
: Voice Repeater Uplink 144.400MHz
: Open voice repeating with CW IDer
: All antennas vertically polarized

HABET-6 : 35mm camera taking exposures every few minutes
EXPERIMENTS : Expermental payload cut down mechanism

HABET-6 : W0RPK will make HABET-6 announcements and maintain
INFORMATION : a radio watch on 3.780MHz, 7.155MHz (LSB) and
NETS : 146.67MHz (Mingo, Iowa) before and during mission.

A brief note about HABET-5. The mission was released from the
W0RPK QTH on Friday, May 19th, at 0939CDT. Maximum altitude was
26,444 meters (86,763 feet) ASL after ascending at an average
rate of 5 meters per second (977 feet per minute). All payload
experiments were successful and the payload was recovered early
Friday afternoon. A HABET-5 700 record APRS history file is
available on FTP.TAPR.ORG as /tapr/SIG/aprssig/upload/habet5.hst.

>Jim, N4UCK

You are absolutely correct Jim. After re-reading I can't imagine why I spent time posting a reply to this trivial nonsense. I am outta here. I have much more important things to do, like watching them pump gas down at the TEXACO station. OH OH, am I being pompous by not also including all of the other service stations in my area? Burt, you take care up there in good-ole Cape Cod. If you throw out a CQ and five stations come back to you, now don't you be pompous and only answer one. ; >)

If you do NOT want your club's information presented here
then please inform me of this wish through email.
!!!IMPORTANT!!!

The current data format for submitting club information is....

SCHOOL:
NAME:
ADDRESS:
CLUB OFFICERS
REPEATERS:
CLUB STATION:
STATION TELE#:
ORGANIZATIONS:
YEAR STARTED:
NUMBER OF MEMBERS:
BANDS ACTIVE:
E-MAIL ADDRESSES:
HISTORY

If everyone follows this form it makes it easier to edit and
maintain the list. I see this format changing as the list grows
and new concerns become raised. Please address your email to me
as follows FAQ -(name of school). For example...

Subject: FAQ - Cornell University

This makes it easy for me to move the mail around and put it in
the right folders. I am working on getting this information into
a database which will let me change the FAQ around easier and put
it in alphabetical order. Watch this space.

The FAQ is now in alphabetical order, great day indeed.

DISCLAIMER:
Feel free to copy and disperse this list freely as long as it
remains in its original format. If you do not want your clubs
information in this list then email the list owner and tell him so.

Also...
I am unable to provide any other information regarding college clubs
other than what appears on the list. Either the organization has
requested that it be kept confidential, or I just don't know. If
you do find out, please direct such information to my submission
address above so that others may benefit from it.

station licensed '16, club traced to '49
NUMBER OF MEMBERS:
20-30
BANDS ACTIVE: 80m-10m, 2m, 70cm
E-MAIL ADDRESSES: w5ym@cavern.uark.edu
HISTORY

Oldest license found - 5YM - dated 6/4/20, but there is anecdotal evidence
that we may have been licensed in 1914. Microfiche confirms licensing in
1916 as 9YM - note the wrong district! That was corrected two months
later. The station was active in the early '20s prior to the opening of
KFMQ, the U of A's first broadcast station. Logs have been found for the

'32-'34 period when the station (*W*5YM) was active on 'phone using a
Class B modulation amplifier built as a class project. Loy Barton,
inventor of Class B, was a graduate and faculty member of the U of A.
Haven't found any relics from '34 - '49. 1949 we were granted W5JNI and
our station was in the then-Business Admin building. We suspect the
trustee knew nothing of the previous station as he was not in engineering.
We returned to W5YM in 1952 and the club has been going strong pretty much
ever since.

Bands Active:
HF, 2 meters, 440, packet
Year Started:
1913
Current Equipment:
Kenwood TS 450 (HF), Ameritron AL80B, Mosley Pro67B, and a
packet - Internet gateway.
Organizations:

ARRL affiliate since May 06, 1971
History:
The club was first licensed in 1913 under the call sign 5YA.
We have a certificate from the ARRL dated back in May 06, 1971, that
recognizes our club. We have a "Golden Jubilee of the ARRL DX Century Club"
certificate for over 100 contacts worldwide in 1987, such certificate is
dated back to February 05, 1988. There are no records showing activity
until the early 80's, we still have some of the older club constitutions
dating back to these dates. Currently the club meets once a month.
We conduct a net on Monday nights on both the 444.80 and the 147.24 repeaters.
We also participate in various community events such as races, and
thriatlons. Most of these events are perform in collaboration with
members of the East Alabama Amateur Radio Club, which is the local
club for non-students.

officers/board: hams@violet.berkeley.edu

HISTORY
I worked on this last year. Essentially, we were formed
in 1914 as one of the first stations on the west coast.
We started DX receiving experiments at this time, and
soon established skeds with the University of Washington
and a few other schools. Our first call was 6BB and dates
back to at least 1920. I think oneof our members was the
first woman to get a commercial radiotelephone operators
license in 1924. Early on we were also connected withthe
commercial station here at Cal, and did early broadcasts
from football games, alumni dinners, etc. Club fell into
decline in the1930's, but was revived after the war,
and has followed typical boomand bust cycles since.

World Wide Web URL: http://www.calpoly.edu/~dmalone/w6bhz/
HISTORY
We're still looking for our roots, but have narrowed it down to 1947.
That's about as good as it gets for now, but we're looking for more
history on our club.

Our club is an Engineering Department affiliated club, but recently we're
attracting members from other walks of life, adding to our diversity.
We're involved in ARES/RACES, with our station being capable of running
on our own emergency generator at a moment's notice.

We've recently obtained a high-level mountaintop site, and are working on
the basics there (ie: electricity, antenna masts, etc) and look forward
to expanding our local coverage. Current plans for the mountaintop include:
440 repeater linked to our 146.760 repeater on campus (w/autopatch)
2m crossband repeater (linked to 440 repeater) with two-tone paging
capabilities for ARES/RACES callouts
2m repeater on the WALA (Western Amateur Linking Association) system
2m digipeater on the Packet DX-Cluster
440 digipeater for high-speed digital (56kb?) for real-time Internet

Interests of individual club members includes DXing, ARES/RACES, FM
voice, packet, ATV, and 10GHz digital.

HISTORY
The club has been around for many years. The original
club was W0YI. It was founded over 75 years ago. The
W0YI club call is still maintained here at ISU by one
of our faculty members.

Our club has approximately 20 members who are somewhat
active. There are many more hams here at ISU, but many
of them are too busy with their studies and other clubs
to become involved with the CARC. We are always in
search of new membership.

Our members can usually be found on 2meters or 70cm.
At this point in time, there is very little HF activity
in the club.
Our club has been involved at ISU for many years. We have
meetings several times per month. Every spring, we set up
an open house display and help with communications for the
annual VEISHEA celebration, which is the largest student-run
event of its kind in the United States. We provide
communications for the VEISHEA parade, calling tow trucks,
ambulances, and the police if the need arises.
It is best for new prospective members or people
interested in the club to call me or Clyde Walter at
the numbers above. I am only at ISU during the Fall and
Spring semesters, while Clyde is a professor who is here
year around if the need arises to contact the club in the
summer months.

HISTORY
The MTSU club has been around since at least the 1960s, first as a trusteeship of the Dept. of Industrial Studies, and now under the Dept. of Computer Science. Membership has been small because the historic mission of the University was that of a teacher's college (thankfully that's changing). The Raider Amateur Radio Club is a key player in the packet radio field, and its members provide part of the core support in a project to bring high-speed (56k bps and up) packet connectivity to the entire state of Tennessee, from Mountain City to Memphis.

HISTORY
The Northwestern Amateur Radio Society dates back until late 40s or early 50s. It has been affiliated with the McCormick school of Technology and the department of Electrical Engineering since its inception. The club has achieved many awards over the years, including one of the very early 5-band DXCC's.

In 1991 a storm took down our main tower and antenna, and the shack had fallen into disrepair. However, in 1992 Drs. Allen Taflove and Alan Sahakian took over the faculty advisor position, and launched an effort to bring the station back on the air. In the summer of 1992 a new tower was erected at a better rooftop spot than before at a cost of over $10,000, and faculty and student members together cleaned and renovated the shack, and the old transceiver equipment was replaced. We also pulled in Ethernet cabling for Internet, and got a computer (w9bgx.nuars.nwu.edu).

We are currently looking into holding a course in the Department of Electrical Engineering which will use the resources of the Amateur Radio club, and hope it will increase student participation.

President: Matt Gomez, AA3FQ mgomez@mail.sas.upenn.edu
Vice President: Eric Reiter, WI2N ericj@eniac.seas.upenn.edu
Technical Director: Jeff DePolo, WN3A depolo@eniac.seas.upenn.edu

REPEATERS:
see below
CLUB STATION:
Station 1 - Philadelphia (main campus)

Kenwood TS-940S, Alpha 76A, Icom 275H, Icom 375A, Icom 471A, PK-232,
80286,Azden PCS4000, power supplies, headsets, mics, Vibroplex
iambic, keyer,KLM KT-34A @100', Cushcraft R5 @ 60', 40m dipole @ 60',
KLM 2m/440 OSCAR,yagis, Diamond X200 @ 100', various other VHF and
UHF antennas, one tower on roof - top of tower is at 100', and all
of the usual accessories.

Station is in the engineering building on the 2nd floor. It's been
in the same room since 1924.

Station 2 - Valley Forge

Kenwood TS-530SP (soon to upgrade to TS-850), Dentron Clipperton-L
linear,Kenwood TM-742A 2/440/6m, Icom 271H, 80286, Telrex 5-el
tribander @ 40',3-element 40m monobander @ 70', Mosley TS-33 @ 40',
40m dipole @ 40',75m dipole @ 45', Diamond U2000, long-boom VHF/UHF
yagis, Hustler 2m G6,other VHF and UHF antennas, 5 towers total.

This station is on top of Mt. Misery at the U of P Microwave
Research Center. We go out to this station on weekends, for
field day, etc. It used to be a Nike Missle tracking station
back in the cold war days and now Penn uses it as a research

center. Great location - the highest point in the Philadelphia area.

Linked UHF Repeater System

Main site: Mt. Misery, Valley Forge, PA. 443.8+, 750'ASL, 2.6kW ERP
Phil site: Penncampus on top of high rise, 440' ASL, receive-only
Eagles Peak: Lebanon county, PA 442.400+, 1420' ASL, 800 watts ERP
6m remote: Mt. Misery, Valley Forge, PA 52.525 700' ASL, 200 W ERP
Addtional sites will be going up this spring/summer.

Co-sponsored repeaters

These two repeaters are on Penn's campus on High Rise North. We co-sponsor the repeaters with the clubs listed:

146.685- Holmesburg ARC 440' ASL, 800 watts ERP, two remote receivers
442.700+ NEAR-FAR ARC 440' ASL, 700 watts ERP

W2SZ sports its own Usenet Newsgroup. It's rpi.union.ham-radio.

Some off campus systems may not be able get it.
HISTORY

W2SZ was originally created as 2SZ by the Troy YMCA around 1910. It was turned over to Rensselaer Polytechnic Institute in 1917 where it has been providing services to its members and the community ever since.

The station provides Amateurs with an opportunity to keep in contact with friends at home as well as providing for the learning of radio and basic electronics. The station also provides a friendly and relaxed atmosphere where members can come to get away from the stress of classes and work.

W2SZ, known to members are Zed, is a friendly group of people that are willing to share their knowledge and help those who have an interest in ham radio to get, or advance, their license. In addition they are willing to share their knowledge in the proper maintenance and operation of both club and personal equipment.

The club currently consists of about 30 members and is located at Six Sunset Terrace, Troy, NY. It also has contact with many of the past members who have long since graduated from RPI, or community members who live in the Troy area. It provides the members with many contacts, and also provides the community with a viable method of communication through the repeaters that the club has. In addition to day to day communications, W2SZ also offers lines of communication during periods of crisis. Examples of the Club's community involvement were during the San Francisco earthquake, and during Operation Desert Storm.

Packet W1KMV @ KA1AZ.#SORI.RI.USA.NOAM
HISTORY:
Formed at some time around 1930, but known to be in operation by 1936 as the "Radio Club," encompassing both amateur and broadcast interests. (The University of Rhode Island was previously known as the Rhode Island State College until the 1950s.) Members played an active role in the founding of one of the original eleven college broadcast radio stations, now WRIU-FM.

Civil defense commitments have included operations during the Great Hurricane of 1938 and Hurricane Carol of 1954, in addition to numerous other situations. At various times, the club has done work in earth-moon-earth, satellite, microwave, and similarly exotic modes. URI ARC was among the first stations in New England to use packet radio.

Located for many years in Lippitt Hall, the club station was relocated to the top floor of the Taft Experimental Laboratory in 1986. Taft antedates the university itself by several years, having been built in 1889 to house the old agricultural experiment station which previously occupied the site of the Kingston Campus.

The W1KMV club station license was allowed to lapse, but was renewed by special FCC permission in 1982. Trustees for W1KMV since the renewal have included Wilson Lamb, K4OGP (now N5LFB?), and Prof. Ralph England, WA1YDR.

HISTORY
Herman Moench started our station in 1933
this is some more data about W9NAA, the rose tech radio club at rose hulman institute of technology. I was there from 1974 to 1978 (EE '78). Unfortunately, Herman Moench (W9NZH) died a few years ago -- he was the living history book of Rose having graduated in 1929 (or 26, i don't have the alumni notes here at the office) and then returned to teach in 1931 or 1932, i think. Herman officially retired in 1978 from his position as Vice-President but continued to work with Rose and other organizations up to his death.

The predecessor to the Rose Tech Radio Club turned into Radio Station WBOW (I don't know if the broadcaster is still on the air under that call sign or not).

In the mid-1970's, the radio club equipment consisted of a Central Electronics 100V transmitter, a Collins 75A-4 receiver, a model 28 Teletype, a tape reader and a tape punch (forget the model numbers..), a solid state terminal unit, a Regency HR-2B FM transceiver. Antennas were an 11-element 2 meter beam, a 3-element yagi and dipoles for 40 and 80 suspended between the school's water tower and the power plant smokestack (about 125-150 feet up). Also a Heathkit SB-200 linear amplifier was available.

The station was located on the east side of the main building (now called Moench Hall) at ground level next to classroom C-126, the machine shop and the psychology department's "Rat Lab". The station was a small room large enough for about 3-4 people to be in at once and had an extra wide door to accomodate equipment and people. The north wall had the equipment bench and shelves and there was a window to the outside and a window to the world on the inside so passersby could heckle the operators. Equipment line up was TTY, linear, receiver, transmitter, 2m radio. The RTTY TU, TD, and reperf was on the upper shelf. There was some space on the end of the bench where people could work while someone else was operating. (I want to say the room was about 14' by 8' but I'm not sure.)

Usually twice a year, we would have station cleaning days. Everything would be removed, the shack cleaned, stuff identified, junk disposed of, and everything put back into place in working condition. W9NZH would invite everyone out to his place for a cookout afterwards.

During the 1977-1978 year, Tim Daniel (ex-N8RK, currently in Singapore working for DEC) Kevin Anderson (WD9FRS at the time) and Paul Schmidt (K9PS) were instrumental in selling the student government on the idea that new equipment was needed to refurbish the ham shack. The CE 100V and Collins 75A-4 were replaced by a Drake R-4C and TX-4C that I understand was in service for 10 years. I believe they now have something newer (like a TS-430/440 or so..). The station was also relocated in the 1980's when Moench Hall was completely renovated and is now located off the main hallway near the front of the building.

During my senior year, the club was very active in events and public service. Several operating events were held (such as fox hunts) and the station was a

major net control station for the snow emergency net that year (helps to have that 80m dipole up in the clear...8)). We made trips to area hamfests part of the club's activities including attending Dayton.

The Rose Tech Radio Club still today hosts meetings of the Wabash Valley Amateur Radio Club and holds radio classes for the public interested in getting their ham license.

HISTORY

We have a club call W0QEV that has been ours at least since 1947 which is the oldest log that we can find. The league claims that we have been affiliated with them since 1949 which makes us one of the older if not oldest club station in the zero call region. This far back though and nobody really knows. Someday we will have to search though old call books from just after the war to see just when that call appears.

The club started as part of the department of electrical engineering here. It became a student union organization around a decade ago and as a result has a steady source of funds. As far as membership, if only that was as steady as funding. The club has students, graduate students, professors, university staff and even alumni. Probably around 20 members but only half that many are easy to get a hold of. There are always to few undergrads!

An addendum to the above. After the war st. louis became part of the zero district as opposed to the old nine district. We have reason to believe that the club was around even before the war, but don't know under which call or how we can research this. The ARRL doesn't know and the fcc doesn't even bother with this type of stuff.

This may be true, but it's not the controll operators intent to transmit
the music. The people we call on autopatches have no way of knowing
that someday someone will make a patch and the hold music they play will
violate some law. The subject has come up before, and every time in the
end there was no violation. Let's be reasonable here. The intention of
the law os to prohibit Amateur operators from transmitting music
intentionaly. If anyone EVER recieved a notice of liability for
something like this, I would like to know about it becuase I've never
heard of such a thing.
Tnx & 73
Bill

BL>Master horseback riding a hundred years ago was useful too. Good thing the
BL>DMV doesn't require horseback riding skills to get a drivers license! Now i
BL>only the FCC would follow the lead of the DMV.

Sigh - if we still had as many people riding horseback on our streets
as those driving cars, then your point might have made some sense.

Listen to the average CW sub-band and notice how many signal per
every 10 kHz. Compare it to the SSB segment on the same band.
More CW signals usually. Now take a look at the street outside your
house. See any horses going by? Only certain parts of the horse's
anatomy would be involved in making such a silly comparison.
Your dislike for CW is not going to make it go away. The millions of
hams who enjoy it have just discovered something whose enjoyment is too
ubtle for you I guess.

BL>If more of the old die-hards had an attitude like "it has proven effective f
BL>eighty-plus years", we might all still be getting around on horseback!

You are asleep. Most of us ARE all still enjoying the ART of CW.
(Rather than sitting around moaning about it that is!)

BL>Not for me, thanks.

Fine but puhleez stop belly-aching about others' mode of choice.

BL>I just don't see the point in wasting a bunch of time
BL>mastering something as obsolete as Morse Code.

Why am I not surprised that you would say that after what you wrote
above it, he he!?

BL>I'd rather spend my time

There are modems available for use with cellular phones, which is what I recommend you use. Your laptop won't know the difference, and there is good cell coverage in the Gulf islands. If all you want is email, I can even give you free access on my system (I have a uucp based news and mail system), and if you want full internet access, I can suggest several suppliers in Nanaimo or Victoria.

Packet, while quite successful at forwarding traffic, is glacially slow, especially at 1200 baud. In addition, you need to convert Internet style email to packet through some kind of gateway, and while there is one in Richmond which you should be able to access from your proposed locations, you wouldn't be able to try it out before you left.

For all these reasons, I suggest you talk to a cellular supplier. You may even be able to rent something for the time period you need.

--
rsmits@ham.island.net (Robert Smits)

The big mistake that men make is that when they turn thirteen or fourteen and all of a sudden they've reached puberty, they believe that they like women. Actually, you're just horny. It doesn't mean you like women any more at twenty-one than you did at ten. --Jules Feiffer (cartoonist)

4381. Re: advice for choosing my first rig

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-05 00:00:00 UTC

>>I just get my license and would like to purchase a dual
>>band radio:
>That's great, welcome to the fun filled hobby of Ham Radio. Now, here
>comes the hard part, spending around $500 for dual band HT.

Let me inject a different viewpoint here. Buying a HT as your first radio may not be the best choice you can make. Buying a *new* radio at all may not be the best choice you can make. Nor may buying a *dual band* radio be your best choice. It's possible that a new dual band HT is exactly the right radio for you, but it's far from certain.

Spend a few moments with us analyzing just what you expect from an amateur radio, what uses to which you wish to put it, how you'll be using it, and what the local operating patterns are like for the facets of amateur radio you wish to pursue. Then an intelligent choice can be made as to what a suitable first radio might be for you. (That usually won't be a HT at all.)

Once you've done that, and if a dual band HT still looks like the right choice for you, then some sensible recomendations can be made. IMHO, a used FT-470 is probably the first choice in dual band HTs. The functionality is good, and used prices are right. Like all the other current dual banders, however, the intermod will drive you crazy if you try to use it on a real antenna.

>sense. I own a TM 733, and that faceplate comes off the radio and out of
>the truck quite often. I can imagine dropping it, or having it get otherwise
>trashed.

I was thinking of the 742 when I posted that. Quite a few amateurs
have had a very hard time getting a replacement faceplate for it. Someone
recently said HRO lists the 733 faceplate as available, so Kenwood
may have become more enlightened on the issue of late.

I'd note, however, that Icom, a company I've considered enlightened
in the past, won't sell me a IC-900 head. Now sure, the radio isn't
in production anymore, but am I supposed to just discard a $900
investment because a $100 part is missing? I suppose I am.

Try looking in the lower half of the 2 meter area. 144.050 - 144.200 and
look for your SSB. I have no idea what ever happened to the rtty folks
on 2 meters in southern california.

4385. This Week in Amateur Radi

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-06 00:00:00 UTC
From: clint.bradford@woodybbs.com
Message-ID: <93.35639.7585.0NFBA646@woodybbs.com>
Source record: 244985

Subject: This Week in Amateur Radio #114

For ANY publication:

WASHINGTON, D.C. 06/01/95 - A Washington, DC-based conservative "think tank" - with which House leader Newt Gingrich is associated - has proposed to abolish the federal government's role of spectrum management, and basically to de-license the ENTIRE radio spectrum. Franchises would be auctioned off to the highest bidders, and the Department of Justice would be charged with confiscating radio equipment that was not operated in compliance with these new rules.

The Progress and Freedom Foundation <pff@aol.com> in Washington yesterday released its plan to abolish the Federal Communications Commission. Highlights from the "comprehensive plan" include:

* Unless Congress acts to preserve regulations, all FCC rules and regulations will be rescinded in three years.

* Immediate repeal of all FCC licensing authority.

* All current FCC license holders would receive property rights in the spectrum, enforced by the trespass laws.

* Deeds recorded in a central Spectrum Registry File.

* Any spectrum that has more than 1 claimant would be auctioned within 180 days. Government would establish standardized spectrum parcels for auction.

* Government agencies must "disgorge" their unused spectrum within determined timeframe.

* All restrictions on use of spectrum would be eliminated. Those who win title could develop and/or re-sell the spectrum subject to antitrust review and geographic and interference boundaries; however, legislation would not set forth interference rights in detail.

* Department of Justice would confiscate any devices used in violation of communications rules.

* Complaint investigation and answering of general inquiries from the public discontinued.

* Spectrum above 300 GHz is infrared rather than radio.

SOURCE: Bennett Z. Kobb <bkobb@newsignals.com>, who is editor and publisher of Spectrum Guide, the definitive publication on spectrum

allocations.

Hi Brian ! Looks like you're a "bottom line" man too.
RE:
BC> >IF you want to get on HF do the time. Learn the code. Stop belly-aching.

Boy, this Todd fellow really has a hate-on for CW. He seems to be on a real crusade to help abolish it. Must have had nightmares while HAVING to learn it. (Torture !?) Must be one of those guys who threw the key out the window once he managed to pass his test. Never made an on-air CW contact. I've asked him WHY it should be abolished but I get nothing but the hot-coal dance in his rhetoric filled replies.

No Fear...Most countries follow the guidelines set out by ITU.
CW will be with us for many years to come. Anyone with high hopes of the dropping of the CW requirement for HF privs. had better not hold their breath.

CW for HF !?...Small pain for large gain in my books !

JUST DO (LEARN) IT !

Hugh VA3TO Toronto

JM> >My suggestion would be, use a slide mount (snip)
JM> > so removal can be easy when you leave it at night.

I meant to say to use a slide mount so that removal would be easier when you leave the CAR at night. I don't leave the rig in the car if I am going to be away from it for any extended period of time. The incident occured in front of the Club Station. I didn't have the car locked (usually do that is the strange thing). I suppose they could have used a slim-jim, but it was probably an oversight on my part.

I apologize for the misunderstanding.

I have a bp-1.....and am running baycom.....but this program

....in my opinion....is TERRIBLE!! Does anyone know of

another program that will work with this unit (TNC)?????

The biggest problem with baycom is the text is TOO small!!!

Thank you....

73's....

Please e-mail if you have some information for me at:

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z JUNE 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 06 JUNE AND FORECAST FOR 07 JUNE - 09 JUNE

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 79/19

GOES satellite data for 05 Jun
Daily Proton Fluence >1 MeV: 5.5E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 5.1E+08 (high)
X-ray background: A8.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 Jun 08 Jun 09 Jun
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 Jun: 77/16

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 05 Jun
Learmonth 6 2222 2122
Fredericksburg 7 9
Planetary 8 7

Observed Kp for 05 Jun: 2221 1223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Jun 5 Quiet
08 Jun 5 Quiet
09 Jun 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

06 Jun normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Jun normal normal normal
08 Jun normal normal normal
09 Jun normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
06 Jun 32 about 10% above predicted monthly values

Predicted Monthly T index for June: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
07 Jun 30 10 to 15% above predicted monthly values
08 Jun 30 10 to 15% above predicted monthly values
09 Jun 30 10 to 15% above predicted monthly values
COMMENT: MUFs at Townsville and Hobart were near predicted monthly values. Spread F observed during local night at Townsville, Sydney and Hobart. Sporadic E was observed during daylight hours at Sydney yesterday. Good daytime HF comms expected.

Here's an idea that will make yours a helluv lot better than the
competition: have a function in the www to ask for previous calls - then
add pointer records in the data base to the current call. So when
my friend KZ6S adds his 4 previous callsigns, he can be found by
entering any of them, not just the last one the FCC keeps on file....

At the New Braunfels NWS station (central Texas), several hams have installed a 2 meter station in the NWS station, and are in the process of installing a packet station also. The Skywarn group around here regularly cooperates with the NWS during times of potentially severe weather. It's been an ongoing thing around here for several years now.

>Roger, just what is your problem? It seems like I have read a 100 or
>more messages from you on this subject but it would appear that your
>concern is with what YOU consider to be appropriate in SoCal. I have
>read of no support here for your contentions by anybody else there in So
>Cal.

Har har. Then your reading skills must not be up to snuff. There is
actually lots of support from people here in So. Cal. In fact, if I have
checked correctly, there have been over 20 posts from So Cal, every one of
which supports dumping SCRBBA. The posts to the contrary all originate from
a bunch of guys in Texas.

What's the matter? You can't read, or what. Just when this thread had
settled down into a discussion of the issues, you had to ignorantly jump in
and start with the personal comments, rather than stick to the issue.
What's your problem, chum? Not got a life?

Has it occured to you that there just might be others in you area
>who have no objection to the status quo? What about THEIR desires. As an
>individual Ham you surely don't think that you speak for everyone out
>there, or do you think that? You sure as hell don't speak for me or

>perfect but as close as it can get considering the years of effort that
>have been put into the process. On the subject of "perfect", tell me
>*anything* that is perfect!
>
>You have not stated once, that I recall, just what your objective is in
>your ongoing tirades.
>

In answer to your insulting questions, All I'm gonna say is that my point of
view is the most common one you will find on the So. Cal. repeaters, many of
which I'm a contributing member of.

As far as expertise in the law, I never said I had much. On the other hand,
others on this thread have claimed to have quite a bit of knowledge. What I
did was research their findings by consulting legal texts as well as
real-live experts, in order to evaluate the validity of their claims.

If you don't like it, tough.

>
>From my observation in reading your posts, I think you are just another

>deadbeat who wants the privilege of using other peoples
>repeaters/equipment without paying for that privilege.

See, this is just another ignorant post by you. You don't know anything about whether I'm a paying member of any repeaters. (I am.)

Tell me what
>your law books have to say on that subject.

Who said anything about law books? What *I* say about this subject is that you need to get a life instead of butting in on a pretty good thread that you are too lazy to even bother to read, and then making personal comments against those with whom you think you disagree. (In actual fact, you didn't even get that right, since you were too lazy to read the posts, you don't even know who said what, or who to disagree with. Sad.)

>As for 15 kc spacing, it won't work. Dig out some facts on "desense".

I haven't said one word about 15 Khz spacing 'cause I don't know much about it. Others have, here in this thread, and they do seem to know what they are talking about. If you weren't too stupid or lazy to bother reading these posts, you'd know that.

>
>I hope for your futures sake that you spend as much time studying the
>law as you do here. Or perhaps you have "means" and require no income?

It's summer time, old chap. Finals are over. No studying for several months. I find your concern about my welfare touching, however.

Your whole post indicates that you are too lazy to read this thread before jumping in and slavering all over the rest of us. Why don't you either take the time to read what we are all saying, or simply vamoose?

It doesn't sound like it to me, either Brian.

Only thing is, your experience differs from what others have had. I'm not sure I can resolve the difference, either.

The best test, I guess, is to stand back from the anecdotal experiences people have (which are bound to differ, I imagine) and look at the result of SCRBBA's stewardship.

The result is that most of the repeaters are closed (around 90%) and the average ham in So. Cal. perceives 440 to be closed to him or her. I know of a number of people who have been trying for years to get repeater pairs on 440, and not found the process to be fair or reasonable.

However, you bring up a valuable perspective, which differs from my own, and I'm quite sure we all appreciate it.

If you think I'm wrong about the above, that's ok: that's what the thread is for.

>membership count to four. They believe it will help guarantee that
>clubs applying for licenses are bona fide clubs, and said so publicly.
>If all that were needed to be a bona fide club were a "declaration,"
>they wouldn't be bothering.

You have that backwards. The reason they are bothering is that
the current requirement to qualify as a club under their rules
doesn't define a bona fide club as anything but 2 or more people
who declare (on paper) that they are a club. Now they're going to
up that to 4 or more people in the hopes of discouraging people
from forming clubs just to get club call signs. If they wanted
the clubs to be bona fide under your definitions, they could
have simply attached one or more of the long list of conditions
you enumerated. But they aren't doing that. They're still
trying to define a club by membership counts.

> That's a DARNED GOOD QUESTION seeing how the FCC has adamently denied the
> possibility of ANYONE getting a personalized callsign since 'way before
> AA6/AB6 callsigns were being assigned. (Or am I wrong?)

I always wondered about 'personalized' callsigns, particularly due to the
trend (from the QRZ database):

N0AL ALAN L. CASSEL
N1AL ALAN R. BLOOM
N2AL ALBERT W. WISE
No record for callsign 'N3AL'
N4AL ALBERT H. COYA
N5AL ALBERT L. LONG
N6AL ALBERT L. BROCKMEIER
N7AL ALBERT M. HALE
N8AL ALBERT N. SCHNORRENBERG
N9AL FRED A. RUSIN

8 of 9 N?AL calls are held by someone named Al*

Is this just coincidence, or did the FCC actually use the name in the
callsign generation process?

4408. NEW BOOK ON HOW TO READ WEATHER MAPS

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-06 00:00:00 UTC
From: chaston111@aol.com
Message-ID: <3r247c$8vi@newsbf02.news.aol.com>
Source record: 245100

In the May and June issues of POPULAR COMMUNICATIONS magazine, an ad appeared for the new book on how to read and interpret all the basic weather charts. Since then, there have been a lot of orders and inquiries, so to summarize, here's the scoop on this book:
It is entitled, "WEATHER MAPS" and is written for the non-meteorologist who gets or plans to get weather maps but has no reference on how to read and interpret the surface and upper air charts. The book explains the maps and is easy to understand. The cost is $29 which includes shipping, by check or money order to CHASTON SCIENTIFIC, INC.; P.O. BOX 758; KEARNEY, MO 64060.

Is your first name Stu? <joke>

The callsigns you listed are NOT CLUB calls. Which call sign server
did you use? If you search a little bit more carefully - look in the
KE6??? series. One of the club calls they have is KE6SWR. Look at
the older messages in this sub and you will find a list someone has
compiled.

The personal callsigns were received way back when the FCC was providing
the vanity calls. The program was later then dropped. It is about to
be re-opened.

: >> transmits full power with a 5/8 wave vertical antenna. I suggested
: >> adding a filter to the TV. But it didn't work. I would appreciate
: >> any help and suggestion in solving this problem?

: >You fail to mention wether the TV is hooked up to cable, and if so does it
: >only jam channel 18? The reason it does that is because channel 18 is the 2m
: >(Runs from 144-148MHz) ham band when it comes to Cable TV systems in most
: >places.

: Also, if it is interfering, then I am pretty sure that it means the CABLE
: COMPANY is at fault. Supposedly, if your signal is getting into the system
: (which is supposed to be "closed") then their signal is getting out... and
: the cable channels run across all sorts of services, including thngs like
: aircraft navigation bands. There was an article somewhere that detailed how
: to find the source and how to approach the cable vendor to fix the problem.

: OTOH, it is possible that a cable system in good working order is still
: vulnerable, possibly at the cable box... I can nuke Ch.18 and as far as I
: know the cable system here has no problems that I know about...
:

On the other hand, it could be the TV's fault. The problem may or may
not be coming in via the antenna. It could be coming from anywhere.
Dose it happen with or without an antenna hooked up to the TV? Where is
your ham antenna in reference to your TV antenna (if you have one)? Do
the cables run next to each other around the house? You may just have
one hell of a overload, and are blasting the TV's front end. This
happend to me here in the dorm at Edwards. Where 25 watts was blasting
the persons TV upstairs. Wierd, not really, since my ham antenna was
placed in my room right below his TV. Wiz-Bang threw the floor (my roof)
and into the TV. He was also hooked to cable. The problem being that my
signal was stonger than the cable signal. This is known as fundemental
overload. See your ham test study books for more information.

The cure is going to be simple yet complex. You will have to move the
antenna around, radio around, TV around. Most of all you will either
have to move the TV out of the RF field, or move the RF field. For VHF
please don't tell me you are using a low grade coax cable. I would hope
that Belden 9913 or better is being used. Lenth of the cable can also

have a factor. Please study the books that the ARRL, and others have written on the subject. This problem is the single worse problem next to having "ugly" antennas that hams could have. It is also the most important to solve. By solving this in the best mannor possible you will help preserve the hobby.

Thanks for reading, please feel free to e-mail me for more info.

What a crock! The kids on that machine couldnt find their way to the movies with a GPS unit and a local geographer! The simple fact is the FCC, along with the local Auxillary decided long ago that .435 was a great place for all the local scum to wind-up. Whenever the machine goes down, the misfits go to other 2m repeaters to spread their havoc. The use of civil litigation is going to be the only means of rooting out the "element" and putting them in jail. The FCC has not made it a priority simply because not enough people are willing to take 5 freakin minutes to write a letter. If there were 100 letters a day for a few months from the local hams, demanding that the violators be taken down, the whole problem would cease to exist and there would be a few more of the criminal-class scummies folding napkins on Terminal Island!

That Roy Tucker might be pranking the frequency coordination system with multiple applications for pairs in the 450 band might be some form of subtle humor...something like an experiment, to see who is paying attention. As luck would have it though, the local minority groups have decided to form their own coordination groups, charging that` Tasma, scrcc, etal have acted: "..in a manner consistant with maintaining racist aims so as to exclude minority-group Amateurs from lawful participation in spectrum uses.."

Go figure!

There was a period of time back around 1976-1977 coinciding with
the U.S.A. bicentennial celebration when the FCC opened up the
AA block to Extra Class hams who wanted to request specific callsigns.
I know one other person besides myself that requested our initials
(are you out there Dave, AA6DC?). Assuming the Tuckers were all
licensed Extras at that time it is entirely possible for them to
get their initials in their callsigns. N6TK probably got his using
the other method available up to that time.

4420. Need some ideas for "quiet" inter-canoe communications

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-06 00:00:00 UTC
From: prichard@dseg.ti.com
Message-ID: <3r2c29$2hd@mksrv1.dseg.ti.com>
Source record: 245112

I need some ideas for "quiet" inter-canoe communications. The Heard Museum in McKinney,Tx has recently started a "wetlands" trail tour but

hasn't decided how to communicate quietly from the trail guide to the other boaters. The wetlands tour is brand-new but they are thinking of having 3-4 canoes in the water with 2 people per canoe. However, the people have to be able to ask questions and listen to the trail guide. It would have to be lightweight because they have to portage across a couple levees.

I was thinking about those tour (motor)cyclist that use some communication. I think it has to be electronic and has to be a headset/microphone but I would like lots of ideas to think about. The reason I think it has to be a headset or earphone arrangement is so that the incoming voice signal doesn't scare/disturb the wildlife (have you ever heard the walkie/talkies accidently turned-up loud?).

I am not sure of their budget but I assume it is small because most of their trail guides are volunteers. So their budget will probably not support 900Mhz phones.

From the looks of the schematic, I would expect that you can change the offsets by replacing X3 and X5 on the RF Unit with the proper crystals (there are four hetrodyne crystals, one for receive, one for simplex transmit, one for + offset, and one for - offset).

A competent Kenwood shop (amateur radio dealer) should be able to make the changes without much difficulty.

Not knowing what you've already tried, I'll mention a couple of the
more obvious possibilities:

If your club is a typical general ham club the members will have a
variety of interests and there will usually be some experienced and
some not so experienced members (e.g., you). There should be a few
of the more experienced members who could give a decent talk on their
favorite activity.

Even for fairly common activities like contesting, DXing, or packet
operation you might find someone to give a good talk on and teach
the newbies something about it.

Just about everyone operates 2m FM these days, but I have noticed
that some users still have a lot to learn. A presentation on
such topics as band-plans, desense, intermod and capture effect would
make your members better users. Throw in a little bit about SSB
operation on VHF, too.

Does anyone design and build circuits? Has anyone been on a DXpedition?

A program doesn't require a speaker. Clubs I have been in have had
programs such as 'homebrew contest' and 'kilocycle night'.
Kilocycle night is a sort of show-and-tell where anyone can bring
in some piece of equipment of historical interest and demonstrate
it or at least show it.

Is there a branch of UW near you? There might be a EE or physics prof
who could give a talk on the ionosphere or something else of
interest to hams.

Hope this helps a little.

73,

Gary

Following is the closest item to your request that I was able to find:

Mouser Electronics part # 42KM019 is a 4 ohm to 20K subminiature
transformer with 2" leads and 200mw max output. Page 179 in Catalog 579.
Price (singles) is $2.08. No minimum order, but orders less than $20.00 require a
$5.00 mimimum order fee. PH: (800) 346-6873

Our largest attended meetings are always the ones with Weather related speakers. Someone from the NWB, or a local emergency office will usually come with great videos of tornado's or hurricanes.

Other favorites are when you can talk the real old timers into just spending an hour telling stories, like the time we shut down the movie house with QRM because they weren't using sheilded audio cables, and other equally thrilling stories of yesteryear.

Good Luck, a monumental task.

If you are just looking at canoe-to-canoe for 1/4 to 1/2 mile,
consider the 49 MHz setups intended for survey crews, etc.
Light-weight headphone/boom mike combinations...no license required.

I see 4 listed in my copy of Forestry Suppliers, Inc. catalog...
ranging in price from $35 (simplex) to $100 (full duplex) each.
I'm sure you can find other sources, but Forestry Suppliers number
is (600) 354-3565. Orders: (800) 647-5368.

Hi Bill,

I think you're absolutely right. After all, a friend and I make it a point to call CQ ALL NON-CONTEST stations during contest weekends. You'd be surprised at the number of calls we get. And like you, I've called CQDX and gotten stations in 4 land and closer but never turned one down.

>distinct classes of people, each with its own evolutionary destiny:
>
>1) Hard core contesters who will evolve into godlike
>non-corporeal beings who rule the universe (except for those who
>work only phone contests).

You really mean: hams who take contests _seriously_ (yes, folks, just as there are people who watch Oprah, there are folks who take these circuses^H^H^H^H^H^H^H^Hcontests seriously - capital S).

These are type-A OMs [usually, with apologies to VP5JM :-)], CQ-magazine-cover-wanna-be's, think a 6-over-6-over-6 is a small antenna, subscribe to NCJ [and build lossy filters :-)]. Spend weekends working contests or working on the antennas; no time for procreation and therefore not high on the Darwinian survivability list. Usually end up dying of a heart attack or falling off a tower. XYLs hold estate sales where the next generation of same pick up their cheap Alphas.

Never ever, ever, ever answer the CQ from one of these chaps if you are in the same country and it is a _DX_ contest. Some of them will resort to name calling if you do that.

The truly crazies from this lot look for a low-tide weekend and perform their duty from a piece of rock in the middle of shark infested waters.

>2) Contester wannabes who try to pass as knowledgeable but secretly
>lurk and copy 2 or 3 exchanges to get the call and serial number
>before attempting their own exchange. This group will gravitate
>toward jobs as high school principals and operators of pet
>crematoriums. Eventually they will become extinct.

There are really two types of these poor slobs who have to contend with the type-A chaps. Not only do they [we :-)] have to struggle to copy the "5C X" (oh!! it is 5NN TU, I get it now) at 35 wpm when their code speed on a good day is 18 wpm, they can't use the band to look for the VR6s who disappear during contests.

The first of these are the DX'ers who S&P only for "a new one." These don't even answer the useless "CQ TEST"s emitted by the Type-As unless said type-A has an exotic callsign. (Sorry, CJ7 don't count as exotic :-).

The second of this class are more kind-hearted and provide the canon-fodder [uhhh, QSOs, I mean] for the type-As. These slobs give out the Qs, prefixes, sections and country mults which the type-As need to make them feel superior. These poor folks are happy to work Montana, and get flamed for asking a W7 for a QSL route.

>3) Non-contesters who will grow tails, sit in zoos and fling dung at
>tourists, while chanting "Please QSY -- there's a net down 10KC
>and it's been there for 40 years."

Whats all that QRM? Gentlemen, your last two, please!

>73, de Hans (Grinning, Ducking, and Running)

And you expect to be re-elected? :-) :-) :-)

>average ham in So. Cal. perceives 440 to be closed to him or her.

Until recently, the 440 band was not accessable to the average ham in So Cal because ready-built radios for that band were not available. Only in the last few years have dual-band radios that include 440 been common on dealers shelves, and thus only recently has the average ham even been more than dimly aware of the band.

Had you asked the average ham, a few years ago, where the right place for closed repeaters to be, they would have likely responded that the 440 band was a good place.

Only recently do some hams want to change that. They want the closed repeaters to move. I predict that won't happen. I don't think it should.

> frequency transmissions) for receipt and tuning by a standard FM radio?

You'll be lucky....

88-108 broadcast band radio is not only a different frequency, it's a
different modulation standard; wideband FM, rather than narrowband FM.
Although you'll probably hear *something*, the quality will be near useless.
As the deviation of your converted signal is so small, relative to what the
broadcast receiver expects, you'll get a very low output. The bandwidth of
the broadcast radio is so large that you might have problems with co-channel
interference (it lets two adjacent channels through, not just the one you
want). Finally, the tuning control of most domestic broadcast receivers is
pretty vague and wooly.

You would be much better off feeding your the output of your downconverter
into a better quality receiver, maybe a cheap scanner or airband receiver
that does FM. It needn't be expensive.

The Cleveland Plain Dealer newspaper hosts tours to their new printing plant. Each member of the tour group gets a box and headset. The box is about 30% the size of a walkman. In this way the tour operator can effectively communicate with the tour regardless as to if the tour is in a quiet office or next to a very loud press.

The boxes are made by Yaesu and are much higher in quality than normal FM receivers. They are full quieting without a trace of background noise or static. Although you could do this with a FM broadcast band transmitter and Walkmans, these are of much better quality.

You can get the PD's number through information, 216-555-1212.

I am inclined to agree. Doesn't that suggest, though, that more repeaters should be open than closed, in order to accomodate the maximum number of licensed amateurs who are all using what is, after all, a public resource? (The radio spectrum).

>If you think getting rid of SCRRBA will cure all the problems, you're
fooling
>yourself. Eventually, all the channels will be full and someone like you
will
>accuse the new group of "hording" the frequencies. It's a never-ending
>cycle...
>
This is demonstrably untrue. It shows, as have many of your posts, a lack of knowledge of the situation here in Southern California. In actual fact, the two-meter coordination group, TASMA, is almost universally respected out here, despite the fact that it is next to impossible to get a coordinated two-meter pair. Why? Because it is perceived (accurately, in my estimation) as being an open, democratic organization the main concern of which is the most just and optimal allocation of a public resource: the frequency spectrum.

SCRBBA, on the other hand, is perceived in essentially a diametrically opposite way, and for good reason. Its meetings are closed, its membership is closed, and 90% of the repeaters it coordinates are closed and reserved to its membership. Despite the fact that you profess to be against this sort of thing, you persist in defending the organization. I don't understand it.

Oh well...

We've gone round and round on this issue many times, Mr. Reese, and you still don't seem to want to acknowledge this point, alas. I guess it is simply that you don't understand the issues out here, which apparently differ from Texas.

The following is a QST

A law suit against a commercial bulletin board operator could
impact on packet radio. Also, hams help run the Boston Marathon
and an old friend is back on the satellite. These stories and
more on Newsline report number 929 coming your way right now!

(*****
BBS LAWSUIT

In a ruling that may broadly impact on what can be posted to
any electronic messaging system, a New York State judge has ruled
that Prodigy Services Company is legally a publisher. That it can
also be sued for the transmission and posting of writings of
its subscribers. The decision by Judge Stuart Ain clears the
way for a brokerage corporation to proceed with its libel suit
against Prodigy that it filed last November. It also holds
far reaching ramifications for ham radio messages sent via
packet radio, posted to commercial bulletin boards and to the
internet.
According to the New York City newspaper Newsday, Oakmont

Stratton Corporation contends that a Prodigy subscriber posted allegedly libelous statements to the service in October of 1984. The company says that these included accusations of fraud at the time it was assisting another firm in its initial public stock offering.
In challenging the Oakmont Stratton position that it was responsible for the posting of its subscribers, Prodigy took the position that it is nothing more than a passive common carrier of information. That it was no different than a telephone company or a book store. Prodigy also claimed that over seventy five thousand notes are posted to its bulletin boards every day and it could not be responsible for the content of each one.
But judge Ain decided that Prodigy actually has an activist role in what is posted to its service. As such, it can be held accountable for what is put on the board by its users.
If Judge Ain's ruling is not appealed and if Prodigy looses in trial, it will set a precedent that can affect all forms of data transmission and posting. This could include the comments of hams on packet boards dealing with malfunctioning equipment for which they blame the manufacturer. It could also impact on those warning messages about hams that allege he or she has done something illegal. Or, in simpler terms. What happens in the Oakmont Stratton case in New York, could determine what you can post on your favorite PBBS in years to come

(*****
NH AMATEURS NEW ANTENNA RULES

Some good news. The New Hampshire House and Senate have passed a bill protecting amateurs. House Bill 379 was originally written to include slightly stronger language regarding antennas than that contained in PRB-1. According to New Hampshire Section Manager Al Shuman, N1FIK, the language was then fine-tuned at the suggestion of members of the legislature who are friendly to Amateur interests.
The bill was filed on the coat tails of New Hampshire House Bill 1380, passed in 1994, which provides protection from taxing Amateur Radio towers as real property. House Bill 379 says that no city, town, or county in which there are located unincorporated towns or unorganized places shall adopt or amend a zoning ordinance or regulation with respect to antennas used exclusively in the amateur radio services that fail to conform to the limited federal preemption entitled Amateur Radio Preemption issued by the Federal Communications Commission back in 1985.

(*****
HAMS IN ABUNDANCE AT BOSTON MARATHON

Amateur Radio was widely in evidence at the 99th Boston Marathon that was run on April 17. This year's event saw 12,000 runners and 5,000 volunteers. Amateurs could be found at the

starting line, shadowing rope holders and with other race coordinators. Hams were also stationed at all 26 Red Cross first aid stations, 13 water stations, at information booths and in the lead vehicle.
Hams also served on all of the sweep buses picking up injured runners, in all of the transportation for the VIP runners, in downtown Boston, at the finish line, in the medical tent, shadowing wheelchair escorts, and race officials.
Hams supplying marathon communication came from dozens of New England radio clubs.

(*****
BUSINESS DOWN

While hams may have been in abundance at the Boston Marathon, they are not showing up in another important place. At ham radio conventions and other events. This. even though there are more hams than ever entering the service every month. As was found out at a recent gathering in Birmingham, Alabama, dealers working the convention circuit say that this will eventually impact on the price you pay for ham gear:

At the May 20th BirmingHamfest Amateur Radio Computer Convention, radio equipment dealers admit they're turning a profit, but they're quick to add, it's not like it used to be. Doc Barrett owns Doc's Communications in Rossville, Georgia. He says sales are about 50% of what they were five years ago.

"The equipment's just too high. Too expensive. People are keeping old gear and rebuilding it." Doc Barrett.

Barrett puts much of the blame on the American dollar's weak standing against the Japanese yen. He says radio equipment manufacturers are caught in a squeeze.

They're in a bind, trying not to go up out of reach, budget of the American people. I don't think they are gonna be able to do it." Barrett

A short distance away at the Radio Center USA booth, Larry Smith sells a 2 meter handie talkie. Smith has been attending hamfests for 16 years. He says sales are down about 20 percent from last year.

"What's working against us? Lack of interest in ham radio. Dayton was down. People didn't show up. The hamfest have been much slower. I was just in Kansas City, they were down 30 percent in Kansas City at that Hamfest this year." Larry Smith

Smith says he'll probably reduce the number of hamfests he attends. He blames part of the slump in sales on existing hams.

"We see a lot of new licensees that have no idea what this equipment is all about. Obviously the elmers are not there or are not doing their job. They need some assistance." Smith

On the other side of the exhibition hall, Radio Shack's Charles Carruba is all smiles. He says sales of Radio shack amateur equipment, including a new 2 meter mobile are going well.

"In the future you will notice more and more Radio Shack Amateur Equipment. Because we know there is a market out there. There is a need for it. If you can get a quality product, at a cheeper price, which would you buy?" Charles Carruba

Back at Doc Barrett's booth, price shoppers far outnumber the buyers. Barrett says his business survives because he also sells commercial radio equipment.

"Hamfests don't work anymore. We are probably going to go $1000 in the hole on this hamfest." Barrett

Barrett says what the amateur radio industry needs are more American manufacturers. That, he believes, would mean more hams buying radios and dealers smiling, too.

Doc Barrett says that he has been going to Hamfests for 21 years. He used to attend 27 Hamfests each year. Now, that number has dropped to about 3. And with the number of hamfests some dealers attend dropping, you can bet that sponsors of some hamfests will have a harder time drawing dealers to their event.

LEAGUE COMMENTS IN PREPARATION FOR WRC-95

The ARRL has filed reply comments to the FCC on topics of interest to amateurs in preparation for the International Telecommunication Union's World Radio Conference scheduled for later this year.
First, the League responded to a suggestion by Leo One USA that the spectrum 216 to 220 MHz might be allocated in the future for Mobile Satellite Service uplinks. The League said that spectrum already is heavily used in ITU Regions 1 and 3 by a number of services.
The ARRL also noted that the FCC has allocated 219 to 220 MHz to amateurs, on a secondary basis, for point-to-point fixed digital message forwarding systems.
Regarding future conferences, the League said since the conferences now are predictably scheduled, the FCC should adopt a permanent and forward looking preparatory process, with timetables sufficiently long for public comment to be thoughtful and comprehensive. The League also recommended a more formal industry advisory committee process be put in place.

(*****
TWIAR BACK ON THE BIRD

Some really good news for those who have not already heard it. Word that our close friends at "This Week in Amateur Radio" returned the program to its former home on Telstar 302, transponder 21, on Saturday, May 20th. The amateur radio bulletin service, based in upstate New York, had lost access to the satellite following the announcement that the "Omega Radio Network" was ceasing its operations on April 30th.
"This Week in Amateur Radio" provides ARRL Bulletins, "Amateur Radio Newsline", "The RAIN Dial-Up", and other amateur radio news and information features each Saturday at 7:30 PM eastern. In addition to the C-band commercial satellite feed, the program is carried live on the WA0RCR Gateway 160 meter Net from Wentzville, Missouri on 1860 kHz and by tape delay at other times throughout the week.

(*****
MOON NET

Moon Net is a new e-mail reflector for amateur EME operators that has been established by Michael Owen, W9IP with support of St. Lawrence University. This reflector is devoted to exchange of information regarding all aspects of EME operation. It is an unmoderated list open to anyone with an interest in the topic. Moon Net traffic should adhere closely to EME related topics. Posting dealing with VHF, satellites or general ham radio related topics are discouraged.
For more information please contact W9IP at his callbook address.

(*****
10 METER NET

North Jersey has a new 10 meter Net. The group meets every Sunday 18:00 UTC on 28.357 with an alternate frequency of 28.362 Mhz. The net is sponsored by members of the Sussex County Amateur Radio Club.

(*****
RADIO DBS

At its second annual Users' Conference WorldSpace Corporation reached consensus with its business partners and system users for the implementation of a new technical standard which will enable WorldSpace satellites to offer up to 300 channels of digital broadcasting to 4/5's of the world's population on low cost portable satellite radios called "StarMan," built by Motorola especially for WorldSpace.
Known as "Layer 3," the new standard for satellite to portable digital broadcasting was developed by the renowned Fraunhofer Institute for Integrated Circuits, of Erlangen, Germany. Layer 3 will allow "StarMan" radios to receive a broad range of audio signals with up to CD quality, and will also allow access to advanced multimedia services.

STUDENTS WIN NATIONAL AEROSPACE COMPETITIONS

Several students are national winners in NASA's 15th annual Space Science Student Involvement Program competition. Twenty six national winners presented their projects at the National Space Symposium, May 6 - 10, Hotel Washington, 515 15th St., N.W., Washington, DC.
The Space Science Student Involvement Program is a national competition, co-sponsored by NASA and the National Science Teachers Association, to promote science, mathematics and technology achievement. Over 4,000 students in elementary, junior high and high school competed in five competition categories.

(*****
TELECOM ON WWW

Telematrix Communications, has recently opened a new site on the World Wide Web called "International Telecom Center." As far as we know, it's the only site devoted entirely to telecommunications information and aims to become the main listening post and forum for people interested in this field.

(*****
AT&T ENCRYPTION SYSTEM

AT&T Bell Laboratories announced that it has developed a comprehensive security system for all types of commercial information services.
The AT&T Information Vending Encryption System is designed to protect such services as video on demand, home shopping and banking, software distribution, electronic publishing, and electronic news and alerting services.
The system works on communications networks of all sorts, including the Internet and other data networks, cable television networks and direct satellite broadcasting.

(*****
PHONE SOLICITATION BAN UPHELD

A Northern California federal appeals court agreed with a congressional finding that automated, tape-recorded telephone sales pitches are a threat to privacy and upheld a federal ban on such calls.
The ban was blocked in December 1992, two days before it was to take effect, by U.S. District Judge James Redden of Portland. He said it was too broad and did little to protect residents from unsolicited calls, the majority of which are made by live callers.
But the 9th U.S. Circuit Court of Appeals ruled 3 - 0 on Monday that the law was a valid response to a problem identified by Congress and did not unduly restrict advertisers' freedom of expression.

(*****
OBIT

Long time W1AW operator Murray Powell, W1QIS, died on May 1, 1995. He was 88 years old and retired in 1972.

(*****
DX

In DX, ON4WW, will be active from Rwanda until the end of June. Check 3513 kHz at 20:15z and 1827 kHz at 00:30z, listening up. QSL via ON5NT.

(*****
A-BOMB AT AGE 50

The 50th anniversary of the world's first atomic bomb test will be marked by a special amateur radio special event station operating from near Ground Zero, Trinity Site, in the Central New Mexico desert.
The Socorro Amateur Radio Association will operate NA5N from 11:00-17:00 UTC on Sunday, 16 July 1995, and will use the General phone and CW portions of the 80, 40, 20, 15 and 10 meter bands, depending on propagation. On the CW bands, a war-veteran straight key from the Pacific Theater of World War II will return to the air for this event.
Just before dawn on 16 July 1945, the Manhattan Project successfully tested the first atomic bomb at Trinity Site, about 36 miles southeast of Socorro, New Mexico. Trinity Site, now a part of the U.S. Army's White Sands Missile Range, normally is opened to the public only twice a year, in April and October. The Army is opening the site for visitors on the morning of 16 July for the 50th anniversary, and has granted permission for SARA to operate the special event station then.
As previously reported, another special event station will operate from Albuquerque, New Mexico as well.

(*****
FLEXIBLE TRANSISTORS

French scientists have created a flexible transistor prototype by screen printing a graphite-based polymer ink to form electrodes.
Anna Kochan reported in the April 10th edition of Design News that researchers at the Centere National de Recherche Scientifique hope to develop smart credit cards, windshield displays for airplanes and cars, and roll-up TV and computer screens in the next few years.
The all polymer transistors will be larger than current amorphous silicon based devices, but polymer transistors can be manufactured without vacuums or high temperatures and cost much less to produce.
The CNRS molecular materials laboratory scientists expect a

high degree of interest from Original Equipment Manufacturers who need the physical flexibility and have enough room to make it work.

(*****
NO NOISE

Finally, Pat Kilroy of AMSAT says that there is a new way of ending mobile noise. Pat says that he was reading thru the latest issue of a car audio catalog when he came upon a sure fire way to eliminate any noise from DC to 1 TeraHertz!
For only 170 dollars the particular supplier will sell you a 1 FARAD, 12 V capacitor that is guaranteed to kill pesky ignition noise. That's right. We said 1 FARAD at 12 Volts DC! Imagine adding that across your power supply line.
But one word of caution. Pat says not to discharge it across your car door unless you want to weld the door to the frame!

jmaynard@admin5.hsc.uth.tmc.edu says...
>
>Surely someone licensed since '67 would remember the couple of years in the
>late '70s when Extras could request any 1x2 callsign...and, when all the
>1x2s were gone in the fourth and sixth call areas, they went to AA-prefixed
>2x2s...
>
>In short: you're mistaken.

Well, thank you, Jay. No, I didn't remember. I was in the Army, in Europe,
in the late '70s, freezing my ass off on the German-Czech border. Didn't
have much time for ham radio. :-) In fact, I didn't see so much as a
single copy of QST for 4 years.

That's why I asked the question. I remember getting back to the states in,
oh, I think it was '80, and reading about the new licenses and calls. I was
advanced at the time, so I applied for one of the new 2X2s. Got KD6IX,
which was my call till I upgraded a few years ago. I'm not surprised that
there was other stuff going on that I never heard about. I never knew there
was a time when you could get personalized callsigns. Never heard of that.

Thanks for the info, chum.

Last night, on a television tornado warning which interrupted
the normal program, hams received the credit for spotting a
funnel which was touching down and causing damage.

Here, along the eastern "front range" of Colorado, there is
a very active program which links hams to the weather service...
there is a 2 meter voice and packet radio station set up at
the local weather service headquarters.

Also, the announcer said the report came from the
"amateur radio weather network" to the weather service.

First time I've ever heard that type of credit.

Bill

In article <3r2io7$pjg@alterdial.UU.NET>, k1oik@ccsnet.com says...
>
>This is a multi-part message in MIME format.
>Hello Burt,
>It is rather tragic to see the juvinile garbage coming from the USA in
>many area of Internet, including the amateur sections.

Now here is a comment obviously engineered to foster international amity and good will.
> I would like to inform you and
>all your tunnel-vision US amateurs that a greater percentage of "hams"
>around the world work "barefoot" - 100 watts and quite often with not
>much more than a dipole and/or long wire.

Another inappropriate comment. I can't believe this guy is posting this obnoxious stuff, and then critisizing others for their posts.

Go figure.

>
>..Calling CQ-DX is quite common on all international HF bands. It is
>quite possible because of all the drivel eminating on the "ham" bands
>in the US, you may rarely get to hear the rest of the international
>amateur fraternity. Perhaps - and I would be surprised if what I am to
>say were not true - too many American Amateurs treat the radio hobby as
>CBers treat and violate the CB bands....!

Still another obnoxious comment. I would say that this fellow has a definite problem. I don't understand it.

>
>It is indeed unfortunate in that too many of your compatriots fail to
>grasp the fact that the whole world sees (Internet) and hears (amateur
>radio) so much drivel originating from the USA.

Well,most of everything on the internet originates from the USA. After all, it was invented here. I find your post to be obnoxious and needlessly anti-American.

While there are many
>good and highly skilled amateurs in the US, there would appear to be a
>majority who are nothing much better than the worst type of CB operator.
>During the Second World war there was a well known saying...."When the
>British were bombing the Germans ducked for cover. When the Americans
>bombed everyone but the Germans ducked."

This guy is really a jerk. I cannot believe that he is posting this garbage in a public forum. I just can't believe it. This is the stupidest post I've ever seen on the internet. Did this guy have a frontal, electro-arc lobotomy or something?

I've worked hundreds of ZLs, and have never once had other than a pleasent qso. What is it about the internet that brings out jackasses like this, anyway? You never see it on the air. Only on the internet.

It would seem that saying still
>applies today. When US operators are on the Net the rest of the world
>turns off. And when you are on the Amateur Bands.....! Need I say
>more!

No, he need not say more. He's already made a complete jackass out of himself.

You have my full permission to insert all my comments on the BBS
>Nets used by yourself and other US amateurs.

: Oh, okay. You make a number of good points. I think the intent of the

Wait a minute here... You can't agree with me...I want to go a
few more rounds!! No fair!

: original posting was to lambaste the "key" operator, and perhaps the
: organization also, where one of the key people doesn't know enough about
: normal procedures, operations, and/or tactics to know what to do first.

That isn't how I read it(and knowing host Stan has been operating
lately...) I read it as expecting the Key personnel to have thought
thru EVERY possible contingency, then show up and setup and
do everything that needs to be done by some sort of mental
telepathy... Huh? How do you do that? That is why I took
exception to the way this post was worded. Thus the post...besides
it's getting intoxicating picking on CA OES lately ;-)

I need to join Posters Anonymous or some such ;-)

: In our organization we have some basic rules about things like the
: default place to report when called in, and from time to time we get
: some bozo who's managed to get himself promoted enough to be in the
: way by not knowing even simple things like these rules. THAT sort of
: "key" person was the first thing I thought of when I read the original
: posting.

Well, I'm sure that can happen. I live in a rather large urban
area. Yet the town I was EC for has about 50,000 population,
covers about 2x3 sq miles, and has about 100 hams. Not a
huge turf by local standards. If I did the above as you suggest
there was the Section Manager(an Ex EC for the city) and the head
of the CDF's First Responder's team ALSO living in the city to
give me a clue or two as to which way was up ;-) If I started
to screw up, I suspect I'd hear about it, i.e. get releaved
real fast. The boss was watching...probably sitting in the
seat next to me ;-) We did have problems with some of our
management personnel during the quake, and we tried backing
them up with EC's from other jurisdictions as one method
of handling it. They wound up leaving the program shortly
after the quake.

Back to the original post. Some of the post's points were
appropriate, but the overall message I saw was either
was different, perhaps because of my particular experience
under fire...I saw my name on the post.

: And by that analysis, even though your first question was
: "So, what do I do?", your first _action_ was dictated by the
: procedures you knew well; you established liaison with the coordinator
: of the network of emergency personnel with whom you'd be working.
: The posting gave me a picture more of an EC who turns to his own
: people and says, "So whaddya think we should do now?"

You know...even this isn't necessarily wrong. If you had the
upside down power structure I served under ;-) this might
actually make sense! (Oh...before I was thru with my term as
EC...the DEC lived in town too!)

As per norm...if common sense is exercised...things will probably
work out.

: You're absolutely right; a disaster is the _last_ place where anyone
: should assume anything not specifically spelled out by established
: procedures or direct orders.

>I am inclined to agree. Doesn't that suggest, though, that more repeaters
>should be open than closed, in order to accomodate the maximum number of
>licensed amateurs who are all using what is, after all, a public resource?

I don't think a closed system is bad just because it's closed. This is
where we disagree. I feel if the frequency isn't being used, perhaps it
should be re-assigned...but if it is used, who cares who is using it? At
least there's someone talking.

>SCRBBA, on the other hand, is perceived in essentially a diametrically
>opposite way, and for good reason. Its meetings are closed, its membership
>is closed, and 90% of the repeaters it coordinates are closed and reserved
>to its membership. Despite the fact that you profess to be against this
>sort of thing, you persist in defending the organization. I don't
>understand it.

While I personally feel the coordination group should allow anyone to attend
the meetings, it is entirely reasonable for a coordintion group to effectively
do its job having only repeater trustees as members. I don't blame SCRRBA for
the way they do business, knowing their history. As I said before, many
coordinating groups in the US have only repeater trustees as their members.

Just because I have a different opinion doesn't make it right or wrong.

>I guess it is simply that you don't understand the issues out here

It's not that I don't understand...we just don't agree.

4457. QRZ E-Mail Registry: Update

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-07 00:00:00 UTC
From: flloyd@qrz.qrz.com
Message-ID: <3r4e1m$bdd@maple.enet.net>
Source record: 245006

Sorry, but the previous message had an incorrect URL.
this one is fixed. -fred

QRZ Would like to announce a new email registry for hams around
the world. This registry will provide a common Callsign/Email
Address database for hams with access to the internet to use
from around the world.

With our new WWW page, you can input your e-mail address directly
into the QRZ Callsign Database, where it will be published on both
CDROM and on the internet. With our new e-mail database update
page, you can add your own email-address and see it immediately
update the online database!

I encourage everyone to check in and add their e-mail address
to the database. It just takes a second, and you only fill in
your callsign and e-mail address - it's that simple.

The URL is:

http://www.qrz.com/email.html

The QRZ e-mail registry will be available online via WWW 24 hours per
day and will update and maintain the database in all future versions
of the QRZ! Ham Radio CDROM.

Thanks and 73,

-fred AA7BQ

I realize you're looking for PC software but I thought I'd mention
a Macintosh application called Marathon. It's a full featured
contesting application yet very easy to use. New operators can
quickly become comfortable logging with very little instruction.

If you would like more info, please email me at

Oh, okay. You make a number of good points. I think the intent of the original posting was to lambaste the "key" operator, and perhaps the organization also, where one of the key people doesn't know enough about normal procedures, operations, and/or tactics to know what to do first. In our organization we have some basic rules about things like the default place to report when called in, and from time to time we get some bozo who's managed to get himself promoted enough to be in the way by not knowing even simple things like these rules. THAT sort of "key" person was the first thing I thought of when I read the original posting. And by that analysis, even though your first question was "So, what do I do?", your first _action_ was dictated by the procedures you knew well; you established liaison with the coordinator of the network of emergency personnel with whom you'd be working. The posting gave me a picture more of an EC who turns to his own people and says, "So whaddya think we should do now?"

You're absolutely right; a disaster is the _last_ place where anyone should assume anything not specifically spelled out by established procedures or direct orders.

Ha!!! The CW argument rages on. I hated it when I started and thru necessity (only owned an AM rig and SSB abounded) learned to love it. I still get a thrill when I QSO on CW. I can see it now -----

Child: Grampa Elmer what's that funny noise coming out of your 2 meter rig?

Gampa Elmer: I don't know child, they took away the CW requirement years ago and we didn't have to learn CW, so we never know what repeater is coming thru, they didn't make voice ID mandatory.

Oh well, most hams can't copy 20 WPM anyway, only 15 is the average. I am somewhat pleased with the new "no-coders". My only gripe is if they would only learn that we don't have "personals" on ham radio. That was. again, another era. 73.

Mike, Bill thought someone was sneaking over at night an using his mobile. It was you!!! Reread you post and see what I mean.

I agree, if some of the guys on 20 would shut of the Califorina KWs and jump in the car they'd find the old thrill of ham radio again. Great stuff. Two years ago I used my Dodge Daytona with the rig in the back seat, Hustler on the back, Pikes Peak and all. Last year the XYL's van with a magmount, believe it or not. Still great signals on 20 and the mobilers' band 17 meters. The only problem with the magmount was we were 12 feet high. Caught one bridge overpass and one tree. Try it, you'll like it. Mobiling is so easy now. 73 Paul

>This was only a suggestion, not an advocation to eliminate repeaters.

Nor did I read it that way, I was merely pointing out the realities
of modern mobile UHF communications. Simplex just isn't that well
suited to the types of group discussions favored by those frequenting
VHF/UHF today. Usually, the desired group is scattered over a 50 mile
radius, and moving in different directions. It's just not practical
to maintain roundtable communications with low power mobile equipment
using low mounted omni-directional vehicle antennas in that situation
without the aid of a repeater.

And, the issue you weren't grasping is that that type of operation
is the dominant form of operation currently on VHF/UHF. The type of
random operation you use on HF, or used decades ago on VHF, isn't a
good model for the dominantly favored type of operation currently done
on VHF/UHF. No doubt some contacts could be made simplex to *some* other
station (or stations) from nearly any vehicle location in the LA basin.
The problem is that may not be the *desired* station (or group of stations),
and that the path may quickly fail as the vehicles move relative to each
other.

Expectations have changed since the time when there was only one
repeater, and AM at that, in the basin, and drive time is the prime
time for amateur activity now. We have to consider the realities of
vehicle to vehicle communications when suggesting operating methods.
Simplex just doesn't fill the need very well.

Gary

My wife made a request, no holes in our new Caravan. So, I bought a Larsen 2/440 Glass mount. I have been EXTREMELY HAPPY with it. I have mounted the antenna on the driver's side upper portion of the rear glass. You must be careful to get it below the 'curve' in the glass. With this setup, the only problem I have noticed is the radio will have a slight 'thump' sometimes when I key up.

I use a 5/8 mag mount for 2 meters but I don't have any experience with 440. I use the Diamond trunk lip mount for HF mobile antennas and highly recommend it. It's attached to the hatch door on the left side near the top so the antenna isn't shielded by the body. I'm using the short Hustler mast and a variety of their resonators. I haven't had any problem with interference to car electronics including the AM/FM radio which is fully immune to 100 watts on 20 meters.

>I need some ideas for "quiet" inter-canoe communications.

Radio Shack used to carry a great little headset that could be operated in either the PTT or VOX mode. These were light-weight and easily packed; operated on a couple of 9V AA batteries and had a pretty decent range. They were packaged separately for approx. $20 +/- but you might get a qty % or find a source for a similar item that comes in pairs. If memory serves me right they had 2 ch settings. so it's already preset as far as frequency but does allow you to split into two groups if needed or switch for better clarity or range if circumstances warrant.

Hope this is of help.

I have a 87 Voyager, and I mounted it above the inside dome light.
That made easy access. Drilled a hole and stuck it in. Ran coax down along
the inside of the bar between the drivers door and windshield. Have not had
any problems.

>*dual band* radio be your best choice. It's possible that a new
>dual band HT is exactly the right radio for you, but it's far from
>certain.
For a Tech (or the Canadian equivalent), the HT may be the only way to go.
They can't get on HF, so those rigs are ruled out. When I was searching for
a radio to put in my car, I thought about a mobile unit that puts out 50w
and is permanently installed. But that would mean that when I am out of the
car, I couldn't use the radio (I personally do a lot of my hamming in my
apt). For a new ham on a limited budget, a HT is a good choice. You can
put it in a car, and when you want to use it outside of the car, it will
take a minute to unplug it from the car and go from there.

Whether you need a new radio, that is up to the person. As for a dual
band, I agree. If 440 is not very popular in you area, it certainly isn't
worth the extra money.

>Spend a few moments with us analyzing just what you expect from
>an amateur radio, what uses to which you wish to put it, how
>you'll be using it, and what the local operating patterns are
>like for the facets of amateur radio you wish to pursue. Then
>an intelligent choice can be made as to what a suitable first
>radio might be for you. (That usually won't be a HT at all.)
I don't know about that. A lot of people who get their licenses want to
get on the repeaters and a HT is the perfect answer. It can be used
anywhere, which is what a lot of people want. I don't know too many
people just joining a hobby willing to spend a lot of money for an all
mode radio. CW probably isn't their highest priority (would have gone
for the Tech+), and SSB might not be worth the extra money to a new ham.

>Once you've done that, and if a dual band HT still looks like the
>right choice for you, then some sensible recomendations can be

>band HTs. The functionality is good, and used prices are right.
>Like all the other current dual banders, however, the intermod
>will drive you crazy if you try to use it on a real antenna.
I agree, the 470 is a good radio. You really can't go wrong with that model
(or its successor the 530).

4479. NEED HELP! Respond : Grounding 'Experts' !

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-07 00:00:00 UTC
From: Jeff Krul <jkrul@equist.com>
Message-ID: <3r4qj0$kuj@noc.tor.hookup.net>
Source record: 245028
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.digital.misc

I am in the process of putting together a new HAM 'shack', and I have come across an interesting 'snag'.

I have heard, many times before, to be sure the HAM radio ground is NOT grounded to the house wiring ground system. Various explanations follow, usually to avoid having the house wiring turn into a massive antenna.

Anyways, I was SURE to separate the two and overlooked one point . . . packet ! My TNC uses a serial cable, connected to my computer, which in turn has a grounded chassis! Argh! To top it all off, the serial cable is NOT the right way to ground to a 'secondary' ground. Talk about a 'high' resistance path to ground, forming an 'ideal' ground loop!!!!

My question is, "How can I avoid this, and if I cannot, what effect will grounding to the house ground REALLY have?" "What are my OTHER options?"

Thanks for your replies in advance,
Jeff

Source record: 245030

I only have time today for a quick summary, so please bear with me.

It is not uncommon for VHF stations to interfere with antenna-connected TVs. The front end of a TV, or worse, a TV preamplier, is fairly broad-band. A 2-meter signal can easily overload it. There are two things you can try. First, try a notch filter. Star Circuits, POB 94917, Las Vegas, NV 89193 (800) 433-6319, sells a 75-ohm tunable notch filter that covers cable channel 18 (channel E). This can be used on antenna connected TVs to reduce the overload from your 2-meter signal.

If you are getting into cable TV channel 18, there could be a cable leak, or the TV set itself could be allowing you to leak in. The cable company is responsible for the cable leak, but cannot be expected to repair a leaky TV. Unfortunately, the cable company and the TV manufacturer often get into a finger-pointing contest. There is one quick solution; ask the cable company to demonstrate proper performance of channel 18 using a cable-company set-top converter. If they can, the cable doesn't leak, and the leak is in the TV. Contact the TV manufacturer through the Electronic Industries Association, 2500 Wilson Blvd, Arlington, VA 22201 (703) 907-7626. The EIA will put you in contact with the proper persons at the TV manufacturer.

The ARRL has an information package available. ARRL Members can send a large SASE with 3 stamps to the ARRL Technical Department Secretary, 225 Main St, Newingon CT 06111. The EMI-CATV package is a reprint of an article we published in Communications Technology, the journal of the Society of Cable Television Engineers. We also have the "RFI Package" to offer our Members some help with different types of interference problems. In addition, the ARRL book, Radio Frequency Interference -- How to Find It and Fix It covers a wide range of interference problems. Contact ARRL HQ for information about services and products.

I think the Amateur community as a whole has gotten too UP TIGHT. I think it's time for people to stop offering critisism and start doing something pro-active instead of bickering with each other all the time. With all I hear on the bands (especially HF) and all I read on the Internet, I've lost a lot of the faith I once had in the Amateur community. I don't intend to generalize, and I don't intend to insult anyone, but this constant bickering and pissing and moaning is what has caused me to move twards other hobbies. Being a relitively young Amateur (22 yrs old) I'm sick of the condesending attitude of a large group of "old timers" who feal that you are worthless unless you've got a 100' tower with a beam and and a 1.5kw linear. I'm also sick of the people who think they are better than others because of their class or their electrical expertise, or the fact that they know CW, or the fact that they have a king sized station..you get the picture. If you don't stop bickering amoung yourselves, you are doomed to be destroyed by the commercial intrests that eye your precious spectrum like a hungry wolf eyes his prey. Who cares if someone spells a word wrong every now and then (or uses a word in the wrong context). Or if someone makes a mistake when they offer advice or asks a question. Offer your ASSISTANCE via e-mail and be POLITE. Don't make a fool of yourself. Remember, unless you are sitting on the throne of heaven and logging on to this newsgroup, you yourself are not perfect. How would you feal if every time you made a mistake someone humiliated you in public?
I would suppose you would feal pretty low. Remember what momma said, unless you've got something nice to say don't say anything. Of course I'm violating mom's directive at this point, but perhaps a little shaking up is in order.
The bottom line in all this is that if the ham community as a whole continues as it does today, it is doomed. So many different factions and sub groups exist within this small segment of the population as a whole it looks at this point that it would be almost impossible to untie them for a common cause. I hope this isn't true.
PS, I'm not some whining No-coder as some of you would belive, I happen to think that some of the best people to come into this hobby in a long time are no-coders and have helped to stir the stagnent waters. I myself started out as a no coder and moved up to General, but no I question my efforts....
Tnx & 73

>I don't think a closed system is bad just because it's closed. This is
>where we disagree. I feel if the frequency isn't being used, perhaps it
>should be re-assigned...but if it is used, who cares who is using it? At
>least there's someone talking.

I agree with Jim here. The "open" or "closed" issue is an important one for
those of us with more libertarian tastes (and I tend towards the "open" side
myself), but the most important issue for me is usage. Paper repeaters gotta
go, frequency pairs that get used by 100 members of some group that likes to
keep their expensive equipment for their own use is not nearly as much of
a problem for me.

(Buffington writes -)
>>SCRBBA, on the other hand, is perceived in essentially a diametrically
>>opposite way, and for good reason. Its meetings are closed, its membership
>>is closed, and 90% of the repeaters it coordinates are closed and reserved
.....

This is not all. SCRBBA does not answer reasonable inquiries from
coordinated pair users from its own coordination efforts. Not for years.
Even though friendly letters with SASE's are enclosed. Even though
long detailed letters explaining the issues are sent. Even though they
are sent over months and months. No reply. No action on their
own coordination! I do not support such inaction at all. I see no
reason for it. It is detrimental to the hobby.

>While I personally feel the coordination group should allow anyone to attend
>the meetings, it is entirely reasonable for a coordintion group to effectively
>do its job having only repeater trustees as members. I don't blame SCRRBA for
>the way they do business, knowing their history. As I said before, many
>coordinating groups in the US have only repeater trustees as their members.

As long as they DO their job. I believe that this is a case where they may
NOT be doing their job. Also, if they actually maintain "paper pairs" and do
not coordinate groups that are ready and willing to go, I would call that wrong
too, but have no personal knowledge of that.

>Just because I have a different opinion doesn't make it right or wrong.
>It's not that I don't understand...we just don't agree.

That makes sense. Some of the discussion has gotten pretty disrespectful
in this thread, and that is why I haven't been here much, Jim :-) .
You brave it out, good for you.

: Not for me, thanks. I just don't see the point in wasting a bunch of time
: mastering something as obsolete as Morse Code. I'd rather spend my time
: learning something new.

: -Bob Longo (KE6EQY)

Just when I think I can get away from this stupid thread, somebody
always makes a ridiculous statement like this.

There are some arguments being discussed by some of the "get rid of
the code requirement" folks that have merit. Bob's comments are not
arguments at all, just an expression of an attitude.

Horesback riding: Bob, if nearly half the people traveling the
highways were on horseback, you can bet the DMV would test you on it.

Regarding obsolescence:
Obsolete: "1. No longer in use or practice. 2. Out of date; passe."
As it pertains to current Amateur Radio Practice (especially HF),
Morse is very far from obsolete.

Regarding horseback riding: If you are trying to get from
Nebraska to California fast, (not sure who would really want to :-),
horseback riding would be a foolish (obsolete) way of doing it. If
you are riding fence or working cattle, or your hobby happens to be
equitation, then it's the best way to do it, and certainly not
obsolete.

It is unfortunate for you that you don't want to waste your time
learning something that is so much a part of HF Amateur
communications, even if it is not (in your view) essential.
Not for you?? You'd rather spend your time learning something new??
Great. No skin off my nose. If your present level of involvement in
Amateur Radio satisfies you, fine.

Just don't complain about having to use something as obsolete as a
horse if you ever join a riding academy.

Cheers,
Greg

>least there's someone talking.

I don't think anyone here believes that a closed systems is bad just because it is closed. I think most of the gripes people are expressing are because there are so many systems on 440 that are closed and they would like the band to open up more with open systems. There are many people who would love to put an open system on 440. The problem is they can't because SCRBBA will not give them coordination. They claim the band is full. That may or may not be true depending if you believe that there are paper repeaters.

Even so, when you open the Karl Pagel repeater guide for 440 you will find ~40 systems that are open for the entire 440 FM spectrum for So Cal. When you compare this with the the closed systems, you find that there is less than 20% of the FM repeater spectrum is given to open systems.

There needs to be more open systems to accomodate the influx of hams. To do this SCRBBA needs to bite the bullet and re-coodinate the entire 440 spectrum and allow more open systems. This is a monumental task to implement.

Jim, you've said it yourself that the trustees to many of these 440 systems sit on the board of SCRRBA. Do you really think that SCRBBA is ever willing to allow more open systems when it may affect the interests of one of the board member's repeater? Can you imagine the furor that will arise if they are faced with having to redraw the 440 spectrum? It will NEVER happen (IMHO).

May be Mr. Press has the right idea in starting up another coordinating body. If Mr. Press is successful, this may force SCRRBA to face some of the issues they have been ignoring.

: offering.
: In challenging the Oakmont Stratton position that it was
: responsible for the posting of its subscribers, Prodigy took the
: position that it is nothing more than a passive common carrier of
: information. That it was no different than a telephone company or
: a book store. Prodigy also claimed that over seventy five
: thousand notes are posted to its bulletin boards every day and it
: could not be responsible for the content of each one.
: But judge Ain decided that Prodigy actually has an activist
: role in what is posted to its service. As such, it can be held
: accountable for what is put on the board by its users.
: If Judge Ain's ruling is not appealed and if Prodigy looses in
: trial, it will set a precedent that can affect all forms of data
: transmission and posting. This could include the comments of hams
: on packet boards dealing with malfunctioning equipment for which
: they blame the manufacturer. It could also impact on those
: warning messages about hams that allege he or she has done
: something illegal. Or, in simpler terms. What happens in the
: Oakmont Stratton case in New York, could determine what you can
: post on your favorite PBBS in years to come

I think the editors missed something here. I've read in other
locations that the judge was VERY specific about the ruling, i.e.
that it probably couldn't be extended to other carriers.

The big difference was that Prodigy exercises editorial control over
content of news groups...if they don't like what you say...zappp!
They have BBS leaders(i.e. moderators) that the judge said acted
in concert with the company, and carried out the company's policies.
The fact that the company exercised this control is what opened them
up to the suit! The judge apparently delineated this from other
email/news-group providers who do not exercise such control...if
they let people post away with no form of control at all, then they
are to be treated as common-carriers like the phone company!

Summary - Prodigy was hung by their own editorial Petard!

I have two Yaesu FT-23R 2-Meter HT's for sale. No manuals or box,
but otherwise in good, slightly used condition.

Asking $250 each, but I haven't checked the new price, so make reasonable
offers.

e-mail, or call 404-587-1613.

Richard VE3NAS/W4

4499. ICOM 765 to ICOM 2KL

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-07 00:00:00 UTC
From: bartbc@orionsys.com
Message-ID: <7879-237487501@orionsys.com>
Source record: 245048

I have an Icom 761 and an Icom 2KL. Icom sells a connecting cable to make the connection between the 765 and the 2KL also. I believe it's the same cable. Yes, the automatic bandswitching will work just fine. Set the 2KL to the "auto" setting and as you change bands, the 2KL will automatically change
accordingly. Be sure you use a maximum of 50 watts of drive from your 765. This will give you 500 watts output from the 2KL. It's really a great setup and you'll be pleased with it, especially on the low bands where propagation isn't
always the greatest. Give Icom in Bellevue, WA a call if you have trouble.
Good luck and 73!

No. Neither a third party nor reciprocal license agreement. QST
sporadically publishes the list and any updates if you care to check
there.

W > - Where do the CN hams tend to hang out? I see a very few spots on
W > the
W > packet cluster now that I have a greater interest!

Don't know about E-mail or packet to and from there. Do know that until
the sunspot cycle high comes around again the likelyhood of any kind of
regular contact with them over the air is iffy at best.

>bands as they are on UHF. The point is the most vocal people are griping
>about UHF because they've found out half of their brand new $600 radio is not
>of much use to them... buyer beware.

Not completely true. If you look at most of the companies, 220 is being
dropped by some of big name makers of amatuer radio equipment. 1200
equipment is cost prohibitive to many people this goes the same for 900 Mhz.
As for 6 meters, I don't know the band well enough but my guess is it is either
expensive and/or the band is not popular enough or doesn't appeal to hams.

Buyer beware? Are the airwaves for the use of all hams or just some hams?
The way the 440 FM band is drawn it is clear that the intention of SCRBBA
is to support the latter rather than the former. Although I understand
you views about the existing systems on 440, I don't agree with your views.
The band is for all hams. The coordinating body is suppose to reflect the
wishes of the ham community. If the ham community wants to use the 440
then it should be able to do so. If the ham community doesn't like what it
sees on a particular band the coordinating body needs to listen and address
the problems.

<snip>

>>Right now 440 is completely useless to most hams.
>
>..except for those hams who already have and/or use systems there. This is
>not an insignificant number of people.

Which currently is predominantly private or closed. I would grudgingly
allow private systems on ham radio. Honestely I think private systems
don't belong on amateur radio at all. Private systems belong on the
business band.

>
>There's not a "quick fix" answer to this problem.

No one here believes there is a quick answer to this problem (I hope). But
it is clear that SCRRBA is not willing to do anything or will be faced
with opposition within their organization to fix the problem.

>I have heard, many times before, to be sure the HAM radio ground is NOT
>grounded to the house wiring ground system.

This is a potentially dangerous situation. If your amateur gear is totally isolated from AC ground, there couild be a significant difference in voltage potential between the chassis and AC ground. Under these conditions, simultaneously contacting the chassis of the rig and any AC grounded device would place you in the current path.

>usually to avoid having the house wiring turn into a massive antenna.

This will only happen if the feedline radiates due to an improper antenna installation. If this is the case, adding the AC ground as a radiating element probably won't predictably deteriorate your signal any more than the radiating feeder.

>Anyways, I was SURE to separate the two and overlooked one point . . .
>packet ! My TNC uses a serial cable, connected to my computer, which in
>turn has a grounded chassis! Argh! To top it all off, the serial cable

>'high' resistance path to ground, forming an 'ideal' ground loop!!!!

Ground all nearby "appliances" together, including the rig. This will avoid the risk of electrical shock and will also serve to reduce the liklihood of ground loops.

When the MUF picks up you might try the Argentine and Spanish Novice Band on 10 meters. One of the best kept secrets on 10 meters. 28.900 mhz to 29.100 mhz

Argentina and Spain share the same novice band.

The Spanish Novice stations have a special prefix EC. I am not sure if it is still a rule but they used to have to collect a certain number of QSLs to prove they had been on the air before they could take the exam for EA.

Also there is the Cadena Royal Tica on 14.185 mhz from Costa Rica on nightly.

ARRL Bulletin 57 ARLB057
From ARRL Headquarters
Newington CT June 8, 1995
To all radio amateurs

SB QST ARL ARLB057
ARLB057 NH antenna bill signed

New Hampshire Governor Stephen Merrill has signed into law a bill protecting amateurs' rights to antennas.

The bill, HB 379, earlier passed both the state's House and Senate unanimously and was signed by the governor on June 5. It was originally written to include slightly stronger language regarding antennas than that contained in PRB-1; the language was then fine-tuned at the suggestion of members of the legislature who are ''friendly to Amateur interests,'' according to ARRL New Hampshire Section Manager Al Shuman, N1FIK.

The bill was filed on the coattails of New Hampshire's HB 1380, passed in 1994, which provides protection from taxing Amateur Radio towers as real property. HB 379 reads:

''No city, town, or county in which there are located unincorporated towns or unorganized places shall adopt or amend a zoning ordinance or regulation with respect to antennas used exclusively in the amateur radio services that fail to conform to the limited federal preemption entitled Amateur Radio Preemption, 101 FCC 2nd 952 (1985) issued by the Federal Communications Commission.''

In addition to Shuman, other New Hampshire amateurs who helped in this victory included Rep Ralph Rosen, W1HSB; Rep Tom Kirby, W1EJ; Rep Rudy Adler, W1GUA; Jack Sheehy, WA1ALM, and Cal Calvitto, WA1WOK. Rep Rosen wrote the bill.

Roger, you don't need to build a radio that duplicates what is
commercially available. I've got a 5-transistor 2M xmtr sitting
here that works just fine. The basic fundamentals haven't changed:
oscillator, multiplier stages, PA stage. Please don't scare new
hams into believing that they can't construct a radio.

I've got a 93 Caravan. First, I installed a 1/4 wave on the left front fender using a trunk lip mount. It installed easily, but performance was poor. There wasn't enough metal for a good radiation pattern. Also, the van body masked a good deal of any incoming signal. My next attempt was the good old mag mount on the roof, centered between the roof rack braces. I took off the rack cross pieces, as I never use the rack. I ran the coax in through the driver's door. down along the weatherstripping, and in at dash height. Performance is excellent, and the 1/4 wave (2m only) is still garageable without removing or folding over the antenna. No holes, still garageable, good performance!

ZCZC AE07
QST de W1AW
DX Bulletin 31 ARLD031
From ARRL Headquarters
Newington CT June 8, 1995
To all radio amateurs

SB DX ARL ARLD031
ARLD031 DX news

This week's bulletin was made possible with information provided by the OPDX Bulletin, Tedd, KB8NW, Joe, NJ1Q, the ARRL Outgoing QSL Bureau and Contest Corral from QST. Thanks to all.

ANGOLA, D2. Valy, D2/YO3YX, is a Romanian officer with the Romanian Army contingent in Angola under the auspices of the United Nations Medical Corp. His tour will be until year end. He is active mainly on 14268 and 21266 kHz SSB with a homemade transceiver, 400 watt linear and a rhombic antenna. Valy is willing to QSY for CW contacts. QSL via YO3YE, PO Box 55-36, Bucharest, Romania.

NORTH KOREA. Two members of the recent P5 operation, Olli, OH0XX, and Martti, OH2BH, have received an invitation to conduct a full scale operation using the calls P51XX and P51BH. No dates for this potential operation have been mentioned.

ANDAMAN ISLANDS, VU7. In the lull of VU2JPS spots comes a report that VU2RKC and others are planning a DXpedition slated for October, and that some progress has be made in securing licenses and operating permission.

WESTERN SAHARA, S0. Tim, KC0PA, is back to duty with the UN peace keeping forces and is signing 4U/KC0PA. He has equipment for HF and 6 meters. QSL via VE9RHS.

Watch for Enrique, EA5AD, in the next few days, signing an S0 call sign ending in URE. He should be on from more than one location with an emphasis on RTTY.

TANZANIA, 5H. The Tanzanian Amateur Radio Club and Net are now active and on the air. Listen for them on Sunday mornings at 0500z on 7080 kHz.

TUNISIA, 3V. Mike, JA2PDQ, is signing 3V8BB and is active on CW, SSB, RTTY and satellites until mid-June. Check 14240 kHz SSB at 2230z, 14030 kHz CW at 2315z and RTTY on 14083 kHz between 0030 and 0130z. QSL via JF2EZA.

QSL BUREAU NOTES. The new address for the British Virgin Islands QSL Bureau is c/o Dirk J. de Jong, PO Box 137, Road Town, Tortola, British Virgin Islands. Bureau manager, Dirk, states that only cards for calls starting with VP2V are handled by the service. Cards for calls starting with VP2E, VP2M, or /VP2V reciprocal licensed stations will be discarded.

THIS WEEKEND ON THE RADIO. The ARRL June VHF QSO Party is from 1800z June 10 to 0300z June 12. Exchange grid locator. Complete contest rules are on page 134 of May QST.

ANARTS WW RTTY Contest, sponsored by the Australian National Amateur Radio Teleprinter Society, runs from 0000z June 10 to 2400z June 11. Operate RTTY, AMTOR A and B, ASCII and packet, exchanging RST, time in UTC and CQ Zone. Details appear on page 113 of June QST.

The TOEC WW Grid CW Contest, sponsored by the Top of Europe Contesters, runs from 1200z June 10 to 1200z June 11. Exchange RST and grid square. For more information check page 113 in June QST.

: TIA,

: Bill B.
: KC7JSD

Yes Mir transmits on 145.550 simplex. They are ALWAYS using their ham station, You may hear voice or packet. When I say always using the ham equiptment I mean they use it quite frequently. I've heard Norm working voice during several passes over here and I've connected to the PBBS but got a Busy signal and was disconnected. Norm has been VERY active on the radio and usually goes after the weak stations as opposed to the very strong ones to give people a fair chance at a contact. By the way, when STS-71 finally goes up the shuttle will be using NEW freqs for their sarex station. The downlink will be 145.840 and uplinks are 144.450 and 144.470. They will NOT favor a specific freq. either. These new freqs are for the MIR dockings only. Mir will continue to use 145.550 as will the non-Mir docking shuttle missions.

I have a '90 Caravan and I used a L bracket mounted on the top of the
car body at the rear door. I had to drill 2-3 small pilot holes for
the sheet metal screws. I gooped it up with some sealer. The only
other hole I drilled was thru the flange on the side of the door to
run the coax in. Once coax was in I routed it under the trim along
the driver's side to the front. As usual, you run out of coax 1-3 feet
short.

I use a Larson 2m/70cm antenna. The only issue was forgetting to remove it
when going into a parking garage. After buying another one I park on the
street!!!!

BTW there is some interference to the AM/FM radio when at high power on 2m.

I turn off the AM/FM radio.

Good Luck!

most "conventions" are just flea markets. been there, done that, got the T-shirt.

> hams than ever entering the service every month. As was found out

basic conflict -- more hams entering every month but sales are down?
or are sales down just for the "traditional" sellers...?

> Barrett puts much of the blame on the American dollar's weak
> standing against the Japanese yen. He says radio equipment
> manufacturers are caught in a squeeze.

they have options.
subcontract the work to an in-country manufacturer or build a plant here.

> "We see a lot of new licensees that have no idea what this
> equipment is all about. Obviously the elmers are not there or are
> not doing their job. They need some assistance." Smith

it's MY job to make YOUR sales? hogwash! you had it "easy" and now
it's going to take some work to get your customer base back that has
been trained to shop for best price. all the new guys are showing up flaws
in your support structure at your company whereas it was pretty comfortable
dealing with lower volumes of sales to experienced folks...

> "Hamfests don't work anymore. We are probably going to go
> $1000 in the hole on this hamfest." Barrett

have to change your strategy..

> Barrett says what the amateur radio industry needs are more
> American manufacturers. That, he believes, would mean more hams

> buying radios and dealers smiling, too.

ain't profitable at current price points/volumes. prices are too low.
of course, the dealers didn't want to carry Ten Tec and front them when
the margins were for the JA gear (or Swan or Drake..). and do the manufacturers
even NEED a dealer network for the base equipment? why can't it all be
run out of an 800 number direct sales w/fed ex overnight delivery?

it works with other stuff - why not amateur radio equipment?

Like many folk tales, while there is a grain of truth to this idea in
some *very* special circumstances, it's generally false, not to mention
being a violation of the National Electrical Code.

>Anyways, I was SURE to separate the two and overlooked one point . . .

>
>My question is, "How can I avoid this, and if I cannot, what effect will
>grounding to the house ground REALLY have?" "What are my OTHER options?"

Ok, this isn't a simple issue, or a single issue. There are several
related concepts and factors involved. Bear with me and I'll try to
touch on most of them.

There are three general reasons given for grounding a station.

1. Improved RF performance.
2. Elimination of stray RF in the shack.
3. Electrical safety.

Of these three reasons, only the latter has merit except under
special conditions. Lets look at them one by one and see where
the truth lies.

1. Improved RF performance.

This is usually a reason claimed for needing a good ground. It is
actually false except with antennas that must work against ground,
and even then the ground needs to be at the antenna feedpoint and
not at the transmitter (unless the transmitter *is* the feedpoint,
as can be true with some random longwire antennas). A balanced antenna,
such as a dipole, yagi, quad, etc, is ground independent. It does not
need a ground connection to work, and will in fact work in free space
with no ground connection present at all. Many verticals, longwires,
and some other asymmetric designs need to work against a ground reference.

That ground reference, however, doesn't necessarily need to be a connection to Earth. A counterpoise, radials, or the like can serve just as well, or better, than an Earth connection. And that connection needs to be under the antenna, and not back at the shack.

2. Elimination of stray RF in the shack.

This is often a reason given for a RF ground connection to Earth. However, this is like taking aspirn for a brain tumor. It may suppress the symptoms to some extent, but it doesn't address the real underlying problem. The real underlying problem is a station design or layout fault. If the equipment has poor Faraday shielding, or if the feeder currents aren't well balanced, or if station interconnections create daisy chains or ground loops, then there will be stray RF in the shack. Grounding one or more cabinets may actually create more circulating currents which can *increase* the problems of stray RF. In some cases, attachment to a good RF ground will reduce stray RF problems at some frequency, but may increase problems at another frequency. This is not the proper approach to dealing with stray RF. The preferred approach is to eliminate the *cause* of the stray RF.

3. Electrical safety.

This is the *real* reason for an effective grounding system for the shack. There are two different hazards that an effective grounding system will solve. One is ordinary electrical shock hazards. In the US, the National Electrical Code is the standard that addresses this. One of the cardinal rules of the NEC is that *all ground connections must be bonded together*. If you fail to do this, you can have a shock hazard between cabinets connected to different ground references. So the myth that you need to keep utility and RF grounds separate is not only false, it can be a safety hazard. (There are a couple of *very* specialized circumstances where the Code permits isolated grounds, but as a general rule, failing to bond all grounds together is a major Code violation.)

The second reason for an effective grounding system is for lightning mitigation. This can be a difficult problem and must be approached with care. A single mistake can be very costly. Lightning is RF, and like any other RF, downlead inductance is a primary concern in setting up a grounding system. Lightning surges also represent peak currents on the order of 8,000 amperes (with ocasional so called "super bolts" going up to 200,000 amperes). These discharges only last for microseconds, so the average power is low, but the peak power is intense. It only takes a slight amount of inductance in a downlead to generate a potential difference of tens of thousands of volts between one end and the other. If these potentials are allowed to express themselves between equipment cabinets, devastating damage can occur to sensitive electronic components.

There are two concepts you must apply to your station ground system as your first lines of defense against these potentials occurring across your equipment. The first concept is that of a single point ground, and the second is called ground window technique.

Single point grounding is simple in concept, but often subtle in execution. Basically, all connections to Earth must be interconnected at a single common point, and all connections from equipment that needs a ground termination must run to that single point and to *no other connection with Earth*. Daisy chained connections are strictly prohibited. Every connection to the single point must be straight and direct from the equipment requiring the ground connection. Ground "busses" are a serious no-no despite their being touted in amateur literature. They form instant ground loops for the equipment, and at the high currents present in a lightning discharge, they can cause thousands of volts to express themselves across the various cabinets connected to the "ground" buss. Don't do this.

The idea here is that because everything is forced to a single potential, that of the single point, *whatever it is*, no current can flow through the equipment. Zero potential difference results in zero current flow. It's those damaging currents you are trying to control. You don't want the path *to* ground to be *through* any of your equipment. Rather, you want the path to ground to be through the single point, and only through the single point. Note well that "ground" is *not* zero volts, and will not *be* zero volts in any sense except a *relative* one during equipment operation or during a lightning strike. This doesn't matter if your layout topology is correct. All "ground" is supposed to be is a *common* potential for everything in the system to reference against. Use of a single point connection *enforces* this single common potential, whatever it may be at any given instant.

When you start thinking about the many "ground" potential interconnections in your station, achieving a true single point ground system seems a daunting task. This is where the related idea of a ground window can help. The purpose of the ground window is to *short out* any possible ground loops in your system at the station entry point.

A ground window is simple in concept, and simple in execution. Basically, it is a physically small conductive plate through which *every* cable that enters or leaves your station must pass. Every cable that is supposed to be at "ground" potential is bonded directly to this plate as it passes through. Every conductor that is not supposed to be at "ground" potential is bonded to the plate via an appropriate suppressor device. (A book could be written on that subject alone.) Then the plate is connected to your single point ground by a heavy low inductance strap conductor. Now any large potential

difference that tries to express itself across cables
connected to various cabinets in your shack will find itself
shorted out at the ground window.

Note carefully that *every* cable must pass through the ground
window plate on its way in or out of your shack. That includes
power, telco, CATV (if present), and any network wiring as
well as the usual antenna feeders, rotator control leads, etc.
If only *one* wire bypasses the ground window, the protection
it offers is lost. Don't run extension cords to power outlets
that don't pass through the ground window. It can cost you
everything you own in a strike, including your life.

Now since you've taken great pains to do this protective grounding
system right, you'll find that it makes an excellent general purpose
RF grounding system as well. This is not to say that you'll generally
need a general purpose RF ground for the shack if you've done your
homework on antenna feeds, Faraday shielding, and the like, but you'll
have one anyway. And if you've done the job right (which requires
attention to a level of detail I haven't fully addressed here), your
station will be able to work even during the worst thunderstorms,
and even during direct strikes, without damage or interruption.
Proper grounding is a specialized, but well understood, part of the
protective process that radio and television stations, commercial
and military two way, and *amateur* radio stations should understand
and apply.

I'm looking for anyone who has experience using packet radio while sailing the open seas. My father in law has recently retired and will be moving onto his boat to "sail off into the sunset". As a new ham, he has little experience with packet, and I'm not much help on packet in this setting. Can packet nodes be located on VHF, or HF?

What are your experiences??

>In the 18 years I've been licensed, I've always thought an interest in
>radio communications was the common ground for all amateurs. What am I
>missing?

A bit of pompous puffery perhaps. :-)

Lets look at the 1990 ARRL survey for a moment. While the full results
of this bit of contracted scientific polling has never been released
to the membership who paid for it, some numbers have become public.
One of the results made public is that only 38% of amateurs (all coded
at the time) claim to have *ever* used Morse on the air at all. Only
a minority of that minority claimed to use Morse exclusively or dominantly
in their operations. It seems that 62% of coded amateurs promptly forgot
Morse after passing through the hazing and moved on to modes of operation
more interesting or more relevant to them than something they apparently
viewed with distaste.

Now back when all amateurs had passed through the hazing, were they
really a more cohesive group? I think not. There has always been
infighting between the various factions championing various modes
and styles of operation. Certainly there were the AM/SSB wars, the
repeater wars (which seem to be coming back), the Dxer/ragchewer
conflicts, etc. And there was the major upheaval over that national
disaster (dis)Incentive Licensing. No, saying Morse made amateurs
cohesive totally misses the mark. The only common ground that has
ever existed among amateurs is the spectrum they occupy, and the
desire to explore and use it for their own purposes and in their
own ways that amateurs share (and fight over).

This picture of a lost Camelot with noble knights jousting with
their Morse keys in polite comaraderie, this lost Golden Age,
is more the product of latter day myth than reality. There were
plenty of nasty fights even in the days of The Old Man.

>apt). For a new ham on a limited budget, a HT is a good choice. You can
>put it in a car, and when you want to use it outside of the car, it will
>take a minute to unplug it from the car and go from there.

You can do the same with a mobile rig and the appropriate slide out bracket. When used in either the car or at home, it will offer better performance, and costs are similar, or even cheaper if you are willing to pursue the used market, to that of new dual band HTs. Only if the majority of your operation is foot mobile would a HT be the first choice. There, the small size and integration of battery and antenna with the radio would be a distinct advantage. In all other cases, the ability to operate in high RF areas, the ability to put a decent signal out, etc would go to the mobile rig.

>>Spend a few moments with us analyzing just what you expect from
>>an amateur radio, what uses to which you wish to put it, how
>>you'll be using it, and what the local operating patterns are
>>like for the facets of amateur radio you wish to pursue. Then
>>an intelligent choice can be made as to what a suitable first
>>radio might be for you. (That usually won't be a HT at all.)
>I don't know about that. A lot of people who get their licenses want to
>get on the repeaters and a HT is the perfect answer. It can be used
>anywhere, which is what a lot of people want. I don't know too many
>people just joining a hobby willing to spend a lot of money for an all
>mode radio. CW probably isn't their highest priority (would have gone
>for the Tech+), and SSB might not be worth the extra money to a new ham.

You're right that an all-mode rig isn't likely to be a popular choice, but a radio with better power output so that you aren't constantly referred to as the guy on the handi-scratchie by other users of the repeaters, and a radio that won't fold up and die in intermod alley,

and which will have enough audio to be easily understood in a noisy vehicle, will be a much more favored choice even if all it can do is FM.

Far from being the best general tool, the HT should be viewed as a specialized tool designed to fill the foot mobile niche. While it *can* be pressed into other uses, it will be far from the optimum choice for those other uses. That's why I suggested that the poster analyze the type of operating he is going to do. If the bulk of it isn't foot mobile, a HT may be a niche luxury that can wait.

4543. New VK Licences available now...

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-08 00:00:00 UTC
From: dave@eram.esi.com.au
Message-ID: <3r6ds9$ov2@eram.esi.com.au>
Source record: 244975
Cross-posted to: rec.radio.info,aus.radio,rec.radio.amateur.misc

News from the WIA Federal Office

NEW LICENCES AVAILABLE NOW!

The new amateur radio station licence privileges and operating conditions were gazetted by the government on Friday 2 June 1995 in a 76-page issue of the government gazette devoted entirely to the five relevant Technical Licence Specifications (TLSs).

There are now seven amateur licence sub-types under the general Amateur licence type created by the SMA earlier this year, following revision of the Apparatus Licence system. The sub-types are: Unrestricted, Intermediate, Limited, Novice and Novice Limited, all for individual amateur operators, in addition to Amateur Beacon and Amateur Repeater sub-types, the TLSs for which have not yet been finalised.

The Novice Limited is an entirely new licence. It will be issued to people who have gained passes in the Regulations and Novice Theory Examinations. No Morse code is required. The new Intermediate licence replaces the old Combined Limited and Novice.

According to official advice received on 5 June from the manager of the Compliance and Licensing Directions Team, Business Directions Group of the Spectrum Management Agency, Alan Jordan, new and renewed licences, including the new Novice Limited licence, issued from 6 June 1995 will reflect the gazetted changes. Reference to the Technical Licence Specification (TLS) will printed on the licences.

The SMA advice said amateurs with existing licences may operate under the TLS relevant to their existing licence. e.g. Amateurs with a current Combined Limited and Novice Licence issued before 6 June may operate within the provisions specified in the Amateur Intermediate TLS. Similarly, amateurs with a current Novice licence issued before 6 June 1995 may operate within the provisions specified in the Amateur Novice TLS.

New Novice Limited licensees will be issued with callsigns in the VKxHAA to HZZ block, the letter 'H' being the identifier.

The new no-code Novice Limited licence allows operation on the 2m and 70cm bands, using digital (packet and RTTY) and FM voice modes and a maximum RF power of 30 watts (average).

Novice licensees are now able to use more power: 100 watts peak (e.g. SSB) and 30 watts average (e.g. CW and FM). They are

allowed more frequencies and operating modes: an extra 100 kHz on 15m, more than 500 kHz on 2m below 145 MHz, 433-435 MHz and 438-440 MHz on 70cm, and to use digital (packet and RTTY) modes.

Limited Licensees can now use 10m, from 29.0 to 29.7 MHz, FM, and wideband emissions are permitted on bands above 420 MHz, providing the necessary bandwidth is within a band's limits. Wideband modes include such things as AM and FM television, spread spectrum and pulse modulation transmissions, high speed data transmissions and those "not yet invented".

Intermediate Licensees are no longer restricted to low power on the bands below 50 MHz, now being permitted 400 watts peak and 120 watts average, as well as use of the full 80m, 15m and 10m bands and additional Limited licence privileges.

Unrestricted licensees gain the use of wideband emissions above 420 MHz.

Although gazetted on 2 June, the new licences could not be issued by the SMA until 6 June as the Agency's new RADCOM computer system was not ready to issue them around Australia until that date.

Copies of the TLSs and related documents are available from your nearest SMA office. There are eight documents: the five TLSs, a relevant extract from the Radiocommunications Act 1992, a relevant extract from the Radiocommunications Regulations and amendments, and a relevant extract from the Definitions Determinations No. 1993 (Amendment No. 2).

4549. Help Wanted on Alford Slot Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-08 00:00:00 UTC
From: Brian Hammill <brianh@exide.com>
Message-ID: <3r6mim$m3o@dante.exide.com>
Source record: 245055

I am part of the Triangle ATV Association, a group based in Raleigh/Durham NC trying to get an ATV repeater on the air and encourage ATV activity in this area. We have all of the repeater equipment assembled, but we have found some problems with our Alford Slot antennas.

We purchased two of the 70cm (430 MHz) Alford slot antennas from Mike Stone. After waiting for almost a year to get the second one, we have found that one of the antennas tunes up pretty well around 430 MHz, but the other one isn't even close to resonance at 430, but has it's best SWR around 460 MHz according to a club member's SWR analyzer. This antenna is also physically larger than the other one.

Since the seller of these antennas is now totally unavailable and unlocatable and we didn't really want to have to deal with him anymore, we are hoping to fix the antenna ourselves. The other alternative is to scrap them and go with a DB Products type commercial antenna with teh dipoles turned horizontal.

Anyway, does anyone have detailed technical information on these antennas? Plans, specifications, construction details, and good advice would be appreciated. I already know to stay away from the character who sold us the antennas in the first place. There was supposedly a video on the construction details of these antennas. Does anybody have access to this video who would help us out by letting us see it?

Thanks in advance for any and all help with these antennas. They are little more than smokestacks until we can get the problem resolved.

73,
Brian - KD4BFJ

This is always the case on a band that is heavily used. I'm sure there are
people who would like to put up a 2 meter repeater who can't for the same
reasons. UHF just had this problem later in time.

>Even so, when you open the Karl Pagel repeater guide for 440 you will find
>~40 systems that are open for the entire 440 FM spectrum for So Cal. When
>you compare this with the the closed systems, you find that there is less
>than 20% of the FM repeater spectrum is given to open systems.

I just don't see what difference it makes if the band is being used. The
closed systems I'm familiar with aren't hermetically sealed. New members are
accepted all the time.

>There needs to be more open systems to accomodate the influx of hams.

Why? Aren't there enough repeaters on other bands? Why does it have to be
UHF?

>To do
>this SCRBBA needs to bite the bullet and re-coodinate the entire 440 spectrum
>and allow more open systems. This is a monumental task to implement.

You would be asking them to undo an organization that took 20-plus years to
build. It won't be given up that easily.

>Jim, you've said it yourself that the trustees to many of these 440 systems
>sit on the board of SCRRBA. Do you really think that SCRBBA is ever
>willing to allow more open systems when it may affect the interests of one
>of the board member's repeater?

No, I don't. I also think it's unreasonable to believe they would. Would
you? Try to look at it from their side. I don't necessarily agree with their
position, but I can certainly understand it.

>May be Mr. Press has the right idea in starting up another
>coordinating body. If Mr. Press is successful, this may force SCRRBA to face
>some of the issues they have been ignoring.

On the other hand, it might cause the whole thing to collapse. The cure may
be worse than the disease...and the closed repeaters will still exist.

I had the same problem and the only solution was to replace the switches. I used small C&K push buttons and mounted them on a strip of G-10 PC board material. I used the old mounting board as a template. The buttons on the C&K switches are a bit bigger in diameter, so the holes in the cover have to be enlarged. I have not had any problems since this replacemnet. Any good quality switch will be much better than the one that come with it. It's a shame that they are putting those cheap switches in such a nice keyer.

Godd luck, 73's Paul WA9QNU

I'll be in Pittsburg July 21-24 and August 10-14, and at Nags Head (on the coast south of Washington DC) July 29-August 5 - wandering between the two places inbetween. Any fleamarkets/hamfests around and about those areas on those dates? It would be a change to pick over US bits & pieces rather than UK ones!

I'd appreciate any replies - or even pointers to internet sites listing such things.

Keith & Andy`s Coastal Station (KACS) Mew Island Expedition

Mew Island is just off the coast of County Down in Northern Ireland. Myself and my pal Andy are going to activate this Island on the weekend of 17&18 June 1995. The island belongs to the Northern Irish Islands group eu122 so if you need that one then give us a call. Mew Island also happens to be the only piece of land in Worked All Britain square J68 so if you are interested in this square you have been warned. We will be operating on the usual IOTA and WAB frequencies and if I get time I will be reverting to my favourite band 17m cw. Most operations will probably be on phone. Will have 80-10m kit with us.

I would be interested to hear from anyone who has worked this Island before on HF as I haven`t been able to find any record of it being activated before.

The dates have been arranged with the skipper of a local boat and the people on Mew but the weather may affect things - lets hope not!

Please distribute this as widely as possible to local clubs - I know it is short notice but better than reading about us on the cluster!

73 and look forward to working lots of you!

4557. How to handle interference?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-08 00:00:00 UTC
From: jbober@ida.org
Message-ID: <jbober-0806950812470001@jbober-mac.sed.ida.org>
Source record: 245063

My mother-in-law in northern Virginia asked me about an interference problem that she and all of her neighbors are experiencing. Broadcast TV, Channel 4, started to get wiped out last week, in correlation with the installation of a big Yagi antenna atop a mast at the house across the street. Unfortunately, the fellow living there, and presumably operating a rig that is causing the interference, is a recluse and won't answer the phone come to the door. What is the most sensible approach to putting an end to the interference? Who do we call? How do we even know if the guy's liscensed? Is it possible for us to take care of the matter and still remain anonymous? (The neighborhood actually fears the guy. Fear of the unknown, so to spreak.)

Thanks for all help,
Jim

: : Master horseback riding a hundred years ago was useful too. Good thing the
: : DMV doesn't require horseback riding skills to get a drivers license! Now if
: : only the FCC would follow the lead of the DMV.

: Horesback riding: Bob, if nearly half the people traveling the
: highways were on horseback, you can bet the DMV would test you on it.

: Regarding obsolescence:
: Obsolete: "1. No longer in use or practice. 2. Out of date; passe."
: As it pertains to current Amateur Radio Practice (especially HF),
: Morse is very far from obsolete.

It could be argued that Morse code or horse back riding are not obsolete because they are still used and are practised. However, they are both obsolescent because they are out or date and passe (that should be pronounced as pass-say, but I-net seems to abhor accented letters). They are out of date of, in fact, of their usage related to other forms of transportation and communications.

With respect to horse back riding, its usage is relegated to, for the most part, to pleasure, the joy of riding. Very little of it is used as a viable means when compared to other means of transportation. (Yes, yes, .. the Russians still have border guards mounted on horses. If that make you feel more secure, then move there and argue from that point of view).

The use of Morse code is very similar in scope as horse back riding. It now is relegated (or soon will be) to only those whose use of radio is a pastime of a non-commercial variety (in fact, this is what is most unusual about amateur radio - it is the only hobby which by international regulation specifically forbids commercialization as well as being regulated like no other leisure time activity). Since this is a pastime, there would seem to be little incentive for the government to mandate the testing of the knowledge of Morse code, particularly since it does not contribute to the mitigation of harmful interference.

I have noticed in some other threads warning that the deletion of the Morse code testing is the thin edge of the wedge of also dropping the technical requirements, letting open the floodgates to the CB hordes who are licking their chops to have access to the amateur allocations without having to take an exam.

With respect to the CB hordes, time warp yourself from 20 years ago and get yourself into the present. They aren't there.

With respect to the technical requirements, nothing could be further from the truth. The government does have an interest in ensuring that the users of the spectrum should conduct their activities in such a manner that harmful interference is mitigated. Therefore, dropping the technical requirement from amateur service examination would not be in the best interests of the government because it would have to expend more resources to mitigate the interference. In other words, nobody's interests would be served if amateur radio technical examination was eliminated. However, it could be argued that the content of the current exams is probably inappropriate and should be changed.

: Regarding horseback riding: If you are trying to get from
: Nebraska to California fast, (not sure who would really want to :-),
: horseback riding would be a foolish (obsolete) way of doing it. If
: you are riding fence or working cattle, or your hobby happens to be
: equitation, then it's the best way to do it, and certainly not
: obsolete.

Why would it necessarily be foolish? To decide to ride from California to Nebraska, hoping to arrive in two days may be foolish, but the activity in itself does not appear to be foolish. Regardless, it is still obsolescent when compared to other means available.

: It is unfortunate for you that you don't want to waste your time
: learning something that is so much a part of HF Amateur
: communications, even if it is not (in your view) essential.
: Not for you?? You'd rather spend your time learning something new??
: Great. No skin off my nose. If your present level of involvement in
: Amateur Radio satisfies you, fine.

Those of us who advocate the discontinuance of Morse code believe that the certification process be consistent in its objectives unlike the present mandatory testing of Morse code - allow each individual to determine their level of involvement.

: Just don't complain about having to use something as obsolete as a
: horse if you ever join a riding academy.

He wasn't - he was drawing the logical conclusion that since horse back riding is obsolescent, and it is not tested prior to beoming involved in equitation, Morse code testing should also be discontinued because of its obsolescence.

: Cheers,
: Greg

Two points, with which every active ham in So Cal is familiar with, Mr.
Reese:

1) No, there aren't enough repeaters. We are licensing new technician-grade
hams at a breakneck pace. 2 meters is extremely busy compared to just two
or three years back.

2) Why UHF? Because 2M/440 is the equipment that is readily available.
Like it or not, 99% of new hams do not build their own equipment. This will
never change, now that technology has made our gear so advanced. Even the
ARRL acknowledges that our hobby has evolved from being one for
experimenters to one for communicators.

How could the cure be worse? Right now 440 is completely useless to most
hams.

Someone might want to do a little research to find out how many of these clubs have asked the Tucker family to get the club callsign for them. I checked with the Southern California Six Meter Club and they requested him to get the club callsign for them. They are going to try for a vanity callsign for the club and this is one way to get it. They may even keep the one that they received KE6SWR.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Let me inject a different viewpoint here. Buying a HT as your first
: radio may not be the best choice you can make. Buying a *new* radio
: at all may not be the best choice you can make. Nor may buying a
: *dual band* radio be your best choice. It's possible that a new
: dual band HT is exactly the right radio for you, but it's far from
: certain.

May I add that I support Gary's suggestion very strongly indeed.

You will learn a lot from your first radio, whatever it may be, and
this learning will start to drive you towards your second radio ! New
dual band hand-helds have bad depreciation, so consider something second
hand and cheap to learn on - to help you form your *own* opinions. This
will leave your cash intact for when you make your own decision, based
on your own understanding of your own preferences and needs.

Don't look at a first radio as an endpoint, it's a beginning.

: Spend a few moments with us analyzing just what you expect from
: an amateur radio, what uses to which you wish to put it, how
: you'll be using it, and what the local operating patterns are
: like for the facets of amateur radio you wish to pursue. Then
: an intelligent choice can be made as to what a suitable first
: radio might be for you. (That usually won't be a HT at all.)

HT's are in a lot of demand, and so prices are kept high. Going for
a cheap second hand mobile, running off a DC power supply at home can
give you the most learning per $, and pretty decent performance.
Although it will blow the socks off any hand-held, you do lose out on
the odd bit of fun of wandering around outside while on the air. You can
still put the thing in your car and operate mobile, and still have
higher performance than a hand-held used in-car.

Hand-held radios have had a number of design compromises made:

Smaller size at cost of degraded performance
Longer battery life, paid for with further degraded performance.
Wide-coverage receive, paid for with ... you guessed it!

The latest units have moved even further in these directions.

The modern hand held offers portability at all costs. If you have to
have the portability, then you pay for it. If you have doubts, question
how much you need portability.

The joke is that older VHF and UHF radios offer low prices, high performance; while new ones offer high prices, low performance and a variety of impressive twiddly features. Fashion has demanded more bells and whistles, smaller size, and the ability to operate as a scanner. Sufficient people buy them, unaware of the hit on performance that all manufacturers have gone this way. Their profits have not suffered :-)

Test the water, then decide where and whether to jump in.

: Once you've done that, and if a dual band HT still looks like the
: right choice for you, then some sensible recomendations can be
: made. IMHO, a used FT-470 is probably the first choice in dual
: band HTs. The functionality is good, and used prices are right.
: Like all the other current dual banders, however, the intermod
: will drive you crazy if you try to use it on a real antenna.

This is good advice.

Also, for the price of a new dual bander, you could probably buy a good 2m hand-held (The HTX202 is well-regarded) and either a similar 70cm unit or a scanner! (possibly both if you find them on the second-hand market)

Whatever you do, I hope you have fun,

Cheers
David GM4ZNX

4566. ICOM IC2A/2AT/2E Trancievers

Newsgroup: rec.radio.amateur.misc

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,uk.amateur.radio

Can anyone supply me with the formula to calculate the crystal frequencies for the ICOM 2A series 2metre hand helds. I need this information so that I can modify these radios for use by the AIR TRAINING CORPS (Royal Air Force Cadets for non UK amateurs)

I have the service manual but this information is missing

many thanks

Dave Deacon, G7IRK

: Despite the fact that I also use a Bug and a Heath keyboard, iambic keying
: continues to elude me as an attainable skill. Anyone else out there
: have this problem, and have you found a way to overcome it?

Part of your problem may be with the design of many keyers (like the one
inside my ICOM 765) which adds an extra element to the end of a
character if you don't release one of the paddles before the last
desired element starts.

For example, to send a 'K', you hit the dah paddle just a
little before the dit paddle and squeeze them both until the
last dah starts... after which many keyers send an extra dit unless you
had released the dit paddle before the last dah started.

The Curtis keyer chips have both 'A' and 'B' modes...
one works this way, the other allows you to hold both paddles until
just before the end of the last code element you want.

Some people say the "trailing dot" keyers have "dot memories", but my
homebrew CMOS keyer has dit and dah memories without this pain. I can't
send with the "trailing dot" iambic keyers either!

Jim, I'm sorry about the problem.

The ARRL has some info. on interference and solutions. One thing, if the operator is legal - it may not be his problem there's not too much you can do to him. There's some things you can do yourself: you can put a filter on the Antenna Line that will reject all frequencies less that 50 MHz (pass the TV Signals); and/or, you can put a filter on the AC Power line, in-case the problem is coming in that way. Other than that - you may have to resort to effective communication.

May be you could be *Very* interested in his set-up and ask him about electrical and radio stuff. After you get some communication started you can ask him about the problem you seem to be having and ask him what the sources for the interference may be and how you can protect yourself. Remember - you can't verify (totally) that it him, at this point. He may have a trashy signal - he should take care of that with filters and a cleaner system. Does he know about the interference?

Others, I'm sure, will provide you with the ARRL interference reference's - it was posted here just the other day - but I trashed it too soon. Sorry. If you don't get some good references on actions you can take - send me a note back and I'll help with sources.

If you can give us hams his name, approx. age, city, state, zip, etc. we can look him up in a call sign data base(s) and see if he's a ham. Then maybe we (hams) could start sending him "letters of concern" and get him to take a more proactive.

Respectfully,
Walt / KF0OS

PS. A friend of mine was accused of trashing TV signals once. But, he's a CW QRP'er (uses very low power and really couldn't and wouldn't do it). After months of hasseling and wanta-be lawyering, another guy in the area was tracked down with the help of my ham friend and other hams - he had a heat-pump that was making the noise from a poorly grounded electrical motor. Be carefull and humorous! Don't forget that maybe the antenna connection is loose or if you're on cable - the cable company may be the source of the problem. Hummmm.

: radio communications was the common ground for all amateurs. What am I
: missing?

Actually, there probably IS no 100% common ground between all amateurs. If there were, we probably wouldn't fight so much. :-) I know a number of amateurs who are really only interested in building equipment and have their licenses solely so they can put the equipment on the air to test it. To many of them, the "communication" part is secondary.

Even in the "good old days," Morse Code was really not a 100% common ground; many hams have passed the test and then threw away the key. I know a number of no-code extras.

Perhaps the ONLY common ground that exists between us is a love of "radio arts" and a broad-based knowledge of those arts, created by the studying we had to do to pass our tests.

Amateur Radio is truly 1000 "hobbies" rolled into one, as well as being a valuble radio service. I am glad it is both, for if my interests ever change, I will find that there is room and opportunity for me to pursue something new.

Is there a listing or book someplace that gives the time anywhere in the world that indicates the time zone change because of the time of the year? Most maps and clocks come with a standard time zone number; I already know that. However, I am sure there are other places that change the time because of the season (ie. I change from CST to CDT).

Thanks in advance.

>
>2) Why UHF? Because 2M/440 is the equipment that is readily available.

What about 220, 1200, 6 meters, etc.? Radios are just as available on other
bands as they are on UHF. The point is the most vocal people are griping
about UHF because they've found out half of their brand new $600 radio is not
of much use to them... buyer beware.

>Like it or not, 99% of new hams do not build their own equipment. This will
>never change, now that technology has made our gear so advanced. Even the
>ARRL acknowledges that our hobby has evolved from being one for
>experimenters to one for communicators.

No arguement here. It would be next to impossible to build one of today's
processor controlled radios from scratch.

>>You would be asking them to undo an organization that took 20-plus years to
>>build. It won't be given up that easily.
>
>Concur. Let's not ask them to. Start another one.

Thay'll still have to deal with the existing systems somehow...

>Right now 440 is completely useless to most hams.

..except for those hams who already have and/or use systems there. This is not an insignificant number of people.

There's not a "quick fix" answer to this problem.

Source record: 245081

(Regarding the spelling of ham)

No mis-education intended, just bringing to light the
common convention used to refer to the Amateur Radio Service -
more times than not it is simply ham.

I don't think anyone has come up with a definitive origin of the
word "ham", but there are plenty stories out there, all different.
So, therein lies the mis-education. Common convention is to
leave ham spelled ham, regardless of the origin of the word.

One story says ham is a twist on amateur, or am', thus ham. All
lowercase. Another story says it's cuz hams are just that, hams
(as in "hamming it up"). Again, lowercase. OK, another story
says that ham comes from the initials of the founder of
ham radio, or the initials of the holders of the license of
one of the first amateur radio stations. Still, I see ham a lot
more than HAM, Ham, or H.A.M. The spelling Ham probably comes in
second as far as popularity.

I actually found an authoritative reference that said the
spelling of ham is actually all lowercase. Of course, I
can't recall it now, I'll have to dig it up. Will post
if I find it.

:
: I will continue to capitalize "Amateur Radio Operator" and "Ham Radio"
: while editing texts.

Yes, Amateur Radio Operator is common, and so is Ham Radio, if in
a title. However, "ham" and "radio" are not proper nouns thus
do not need to be capitalized. After all, do we write Football Player
or football player? Yes, lowercase. Spelling "Ham Radio" actually
looks just fine if referred to a subject in and of itself, but
I still think I see it mostly as ham radio. Kinda like Unix -
it wants everything in lowercase (Hmmm - is that UNIX, Unix,
or unix? :-))

I go by what I see. The de-facto spelling of ham has always been
lowercase. You usually only see ham capitalized if it is at
the beginning of a sentence, or used in an advertisement. In
mags like QST you will usually find ham spelled ham.

Mike

Thanks for the lift, we (most of us) loved it.

Had to add, though, Radio Shack serves its purpose well, IMHO.
I tried asking a ham in Flagstaff where I might find a "candy store".
The poor fellow directed me to the nearest mall.

(Candy store: HRO, Jun's, AES, etc....)

Bubba is alive and well.....

: As I found out later, theifs regularly cased our lot for nice cars.

I was about to mention the lure of car phones, stereo systems and the like.
Such items are in high demand, and thus easily "fenced." Don't know if
there's much market for car phones, though.

The problem is, as you point out, most thieves aren't very smart. If they
could recognize ham gear as such, they probably wouldn't bother stealing it,
given the limited market for such items. But, in the heat of the situation,
thieves probably would grab everything possible, then sort it out later.

I brought an Icom IC-21 back from Japan in the mid 70s. Since 2m frequency
synthesis hadn't arrived yet, with its 24-channel selector it looked very
much like a CB radio. At that point in time, the CB craze was at its peak,
where CB played a part in movies and songs were written about it. Thus, I
didn't even mount the rig permanently in the car, opting for a
quick-disconnect DC power cord and a mag-mount antenna.

Nancy, one of our Field Day and contest veterans was asked this year to select a logging program for all stations to use. He decided on "click" by KV0I. I used it briefly during a recent special event, and it's quite easy to use. Basically, it's a DOS application, so DOS or Windows would work.

On May 5, severe thunderstorms began moving into the Fort Worth area.
I briefly turned on my TV and tuned to the weather radar channel provided
by the Weather Service and the cable company. The radar was showing very
severe thunderstorms ... blue blotches ... blue is the strongest echo color
on the radar. I had never seen blue before.

I turned on my 2m HT to the Fort Worth RACES repeater, and reports of
baseball-size hail and extremely heavy rain began coming in. At least
15 minutes later, hundreds of people were injured by large hail at an
outdoor festival in Ft. Worth. About an hour later, several people
were killed in the Dallas area when their cars got trapped in flood
waters. This suffering and death was needless, as hams provided
ample warning. I am still quite upset at local TV and radio stations
for failing to provide adequate warning.

Fortunately, local TV stations put in a good word for the hams who
worked that night, some of whom had their cars destroyed by large hail.
Perhaps more radio and TV stations will monitor hams next time, and provide
warnings to everyone in the area.

Although Jerry might have put it more eloquently, I agree with his viewpoint. It's nearly impossible to read a newsgroup for any length of time lately, without being assaulted with -> off-topic <- articles that speak of incorrect spelling, grammar, or harp on other trivialities such as long .sigs.

I disagree that writing can be "destroyed" by spelling or grammatical errors. Anyone astute enough to write well, probably can get the general idea from an article, no matter how badly written.

If you guys want to complain about a *real* problem, what about those who are too lazy (or uninformed) to use a text editor, and instead quote entire posts, rebuttals, .sigs and the like?

Sorry to have prolonged this inappropriately-placed thread. Can't we discuss things like this via e-mail, or in alt.english.usage?

>>BBS LAWSUIT
>>In a ruling that may broadly impact on what can be posted to
>>any electronic messaging system...If Judge Ain's ruling is not
>>appealed and if Prodigy looses in trial, it will set a precedent that
>>can affect all forms of data transmission and posting. This could
>>include the comments of hams on packet boards dealing with
>>malfunctioning equipment...

This is quite inaccurate.

What this "news" article failed to mention was that Prodigy, as a matter
of posted public Policy, routinely censors ALL messages posted in
ALL areas of its system. Via software and human being screening.

This is quite a different situation than the VAST majority of BBSs and
packet stations - which are NOT in the same situation as Prodigy at all.

This ruling has absolutely NO detrimental effect on the great
majority of BBSs. Unless you tell your Users that ALL of their messages
are being screened for anything the Sysop might find offensive for any
reason, this ruling has nothing to do with your System.

ARLP025 Propagation de KT7H

ZCZC AP93
QST de W1AW
Propagation Forecast Bulletin 25 ARLP025
From Tad Cook, KT7H
Seattle, WA June 9, 1995
To all radio amateurs

SB PROP ARL ARLP025
ARLP025 Propagation de KT7H

Average solar flux was up ten points this week compared to the last week in May. It should peak in the low nineties from June 12-17, then bottom out around 70 at the end of the month. Recurring coronal holes will cause disturbed conditions indicated by high A and K indices on WWV around June 12, 13 and 26.

As we head toward Summer expect seasonally higher noise levels and a generally lower MUF. E skip should provide some interesting conditions on 6 and 10 meters. Except when solar flux is high, as it will be over the next week, expect 20 meters to be the highest frequency HF band usable for long range propagation.

Sunspot Numbers for June 1 through 7 were 12, 12, 35, 34, 68, 47 and 38, with a mean of 35.1. 10.7 cm flux was 70.5, 73.3, 74.7, 79.1, 81.7, 79.4 and 82.5, with a mean of 77.3.

The path projection for this week is from Fort Collins, Colorado to Taiwan.

Check 40 meters around 1045 to 1145z, and 30 meters from 1000 to 1300. 20 meters looks good most days from 0730 to 1630, with best conditions every day around 1200 to 1400. On some days 17 meters may be open around the clock, but your best bet is around 0400 to 0600. 15 meters does not look very reliable, but on some days it may be open from 1830 to 0730.

Josh,

I have used MorseTrainer on my PowerPC (Power Macintosh 8100/80).
It is freeware, from Lars Sundstrom. The version I have is
"US-1.1.1". Size of application, uncompressed, is 198K.

Since a PowerMac is kinda big, I mostly use the Jerry Ziliak tapes.
Lots easier to carry in your pockets.

>From Jim's last message I got the impression that he believes SCRBBA is
JUST
>a coordinating body, and not an organization that handles spectrum
managment.

Mr. Reese has repeatedly claimed to know people within SCRBBA and to be very familiar with the entire situation out here. Since I feel his comments don't support this, I've been critical of his views.

However, perhaps you're right, and maybe I **have** been too harsh with him. We are, after all, all brother (or sister for the YLs!) amateurs.

BTW, my comment that Mr. Reese speaks as though he thought the trustees own the freqs, was addressing his attitude, not his probable understanding of the law. I'm sure, as a member of an active coordinating body (one that got sued one time!) that Mr. Reese has much more practical experience regarding coordination, spectrum management, etc., than I do...

Then again, I never said I know much about it.

W. Virginia:WWNR, 620am, Bluefield/Beckley

NOW ON SHORTWAVE AS OF JUNE 5, 1995!!!!!!
WWCR, 100,000 WATTS, ON TAPE DELAYED BASIS TWICE PER WEEK.
Saturdays at 2100 UTC on 12.160.
Mondays at 0700 UTC on 7.435.

ALSO AVAILABLE ON TVRO SATELLITE on Spacenet 3, Transponder 9,
6.8 Audio.

Ham Radio & More is on the Talk America Network. It is aired live
every Sunday at 6:00pm EST, originating from Phoenix, Arizona.

Our toll free listener call-in line is 1-800-298-TALK. The
originating station number is 1-602-241-1510 for more
information.

Any radio station can air the show FREE OF CHARGE. Get your local
station to air the show by calling the program director asking them
to air the show. Faxes help, too. Again,there is NO CHARGE for the
station to air the show, so a lot of calls asking for the show
can really work.

Also, be sure to check out our WWW Home Page. It has information on
upcoming shows,reviews of past shows, and even theme music. It is
updated courtesy of the Boston Amateur Radio Club. Access it at:
http://www.acs.oakland.edu/barc/ham-more.html

>
>>Buyer beware?
>
>Yes, buyer beware. Just buying a radio without doing some research into
what
>the activity of that band is is foolish.

See, this comment by Mr. Reese illustrates the difference between his perspective and that of others. He seems to feel that it's "tough" if most hams are denied access to 440, and that they can by golly just go elsewhere and maybe not even buy a radio that covers it.

Personally, I think that's a poor perspective because it doesn't take into account that the radio spectrum is a public resource, and that 440 is for the use of all amateurs licensed to use it. A coordinating body, like SCRBBA, that takes Mr. Reese's attitude rather than this one simply needs to be canned.

> I object to anyone assuming that because they have a
>license, they have permission to use my equipment. Nothing gets my dander
up
>worse than to hear people griping about my open repeater having some
problem,
>or not working the way they want it to...

On the other hand, nothing pisses me off more than to hear radio trustees talk as though they own a frequency like it was some kind of private property. You don't own the freq., Mr. Reese, and neither does SCRBBA. They need to be shown that by concerted action.
>
>>The way the 440 FM band is drawn it is clear that the intention of SCRBBA
>>is to support the latter rather than the former.
>
>I really don't think so. They support the existing systems instead of the
>potential ones. This is the way their organization is set up.

Well, guys, at least Mr. Reese has openly admitted the following:

1) SCRBBA exists only to serve its own members (which it limits. Doesn't include you or me, fellows.)

2) Mr. Reese thinks that's just fine.

Mr. Reese is entitled to his position. Just remember that his comments all derive from the above attitude. Those of us who feel that 440 should be for all licensed amateurs, and not merely a self-serving few, should not be persuaded by Mr. Reese's defense of SCRBBA.

>I believe SCRRBA could do a better job of communicating. I do not believe >competition is the answer to this problem.

I believe that SCRBBA has communicated its attitude quite well and that competition is EXACTLY what is needed. From his distant perspective in Texas, Mr. Reese has concluded otherwise.

I had an '86 Toyota MR2 which was stolen on Marten Luther Kings Birthday, back in 1989. Sometime between 2am and 6am that Monday my car was stolen. I was in the process of ordering an alarm system, but didn't get it yet. I had a Kenwood 7730 2m radio, a mobile cell phone, a Pasport radar detector in the glove box, many tools in the trunk and a box of cassettes in the car. I lived in an apartment complex in Wheeling IL. The complex was along a major state road, 83. The neighborhood was fair, but the road carried lots of undesirable traffic.

The car was recovered 1 1/2 months later by the Chicago police in a bad south part of Chicago. Apparently the theifs stole the car by breaking a small triangular back window with the butt of a screwdriver. They proceeded to pop out the ignition key lock in seconds with the same screwdriver. They proceeded to start the car, also with the screwdriver. They had taken all the loose items, except the tapes they didn't like. They removed all the radio gear and the stereo.

What attracted the theifs was the cellular and radio antennas. I am sure by what I found in the car, they were so ignorant not even to notice the plates. As I found out later, theifs regularly cased our lot for nice cars.

When I located the car at the police pound, I found a hashish pipe on the floor by the passenger seat. I brought the pipe in to the police building, still untouched by new hands. The officer grabbed the pipe, threw it in the garbage stating that many of these crimes occur daily. The officer didn't even want to check the pipe for fingerprints.

My new insurance company, American Family wouldn't cover any of the radio equipment even though they had initially told me they "cover any equipment permanently installed in the vehicle". When later told that the equipment was permanently bolted to heavy steel in the vehicle, the insisted I misunderstood them. They said it was not permanently mounted equipment, but "factory installed equipment". They insisted that the agent would never tell me such a thing and I lost over $1500 in tools and equipment in that theft.

I have had ham plates since 1976. I have had many radios in cars. Cost of such equipment has gone up to as much as $6,000. I have, at many times had substantial antennas on the car. I find there 2 good answers to preventing theft of a vehicle or radio equipment.

a. older cars are stolen less often
b. Don't park in high risk areas with a good car with expensive equipment installed.
c. If parked in higher risk areas, remove equipment, (possibly store in trunk) and remove antennas! Removing antennas is very important!

4597. Re: How to handle interference?

Newsgroup: rec.radio.amateur.misc
Date: 1995-06-09 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1995Jun9.140844.22767@ke4zv.atl.ga.us>
Source record: 244804

In article <jbober-0806950812470001@jbober-mac.sed.ida.org> jbober@ida.org (James T. Bober) writes:
>My mother-in-law in northern Virginia asked me about an interference
>problem that she and all of her neighbors are experiencing. Broadcast TV,
>Channel 4, started to get wiped out last week, in correlation with the
>installation of a big Yagi antenna atop a mast at the house across the
>street. Unfortunately, the fellow living there, and presumably operating a
>rig that is causing the interference, is a recluse and won't answer the
>phone come to the door. What is the most sensible approach to putting an
>end to the interference? Who do we call? How do we even know if the guy's
>liscensed? Is it possible for us to take care of the matter and still
>remain anonymous? (The neighborhood actually fears the guy. Fear of the
>unknown, so to spreak.)

If he is only clobbering channel 4, sadly, he is probably an amateur with a 20 meter station, and not a CBer. If other channels are being clobbered too, especially channel 6, then he may be a CBer with an illegal (and generally very dirty) amplifier.

Now some of the interference your mother-in-law is suffering could be the fault of her consumer equipment. The manufacturers of that equipment have steadfastly refused to add the few cents worth of parts that would eliminate most fundamental overload problems from shortwave transmitters. But we could have a case here of a dirty amplifier in an amateur's station too. That can usually be easily cured with a filter, or some equipment adjustments, or both. The trick is going to be getting the transmitter operator's cooperation.

Unfortunately, you're not going to get a lot of help from the government on this issue. You're going to have to use some persistant diplomacy instead. If approached properly and positively, you should be able to convince most operators to work with you in solving the problem. Since you say the person is a recluse, you're going to have to use some ingenuity to make contact with him. If you can furnish us with a name, and if he's an amateur operator, we can likely cross reference him using one of the CDROM listings. Hams who operate HF are as a general rule fascinated by colorful post cards. We might be able to flood him with cards asking him to clean up his act.

In article <3rai73$t0s@alterdial.UU.NET>, Burt Fisher <k1oik@ccsnet.com> writes:
>
> Can you grade the attached term paper?
> Does my student sound like he was influenced by me?

This can't be one of your students, Burt. He didn't include the obligatory

HAMS ARE BORING

message that you seem to never cease spewing forth be it here on Usenet or
in RIME.

He seems to have done a very nice job.

[[EXAMNT6.09 : 3849 in EXAMNT6.09]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-800-326-3942 (8 am to 4 pm weekdays, eastern time)
to find out -- or call the FCC at 1-800-322-1117 during business hours.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

If your license has not been granted within three weeks, and your test
was coordinated through the ARRL/VEC, call the ARRL/VEC at 203-594-0200.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-594-0200 x0282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
203-594-0200 x0219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.
